Any software engineer would have his/her mind blown when somebody dose all of that stuff as simple as that for the first:
1. generate an LXCContainer
2. allocate new file system ("ALLOCATE NEW FREAKING FILE SYSTEM")...

I wonder, if they had had any idea of how Docker would reshape the landscape of the internet, would they have let him talk a little longer?

Letting him finish that sentence would mean death to others I suppose. :/ I hate these time constrains. I hope you folks put up a bit in-depth demo of this interesting tool!

What a shame that he was not allowed to speak more than couple of minutes.... He was doing such a historical presentation...

Now I am wondering what the other guys would have spoken about if he got such less time.....

How does this compare to OpenVZ?

After all, isn't LXC mostly built by its authors?

1 Reply

@ineyaa 12 years ago
We had cgroups and namespaces in kernel for years. It wasn't scripted, but people could use C just fine. Suddenly it's popular and everyone is making tools around it, docker, libvirt-lxc,... and they all label it as something new.
