About us

Krisp's Voice AI technology enhances voice communication through audio cleansing, bi-directional noise cancellation, accent localization, speech-to-speech translation, and call transcription to elevate the customer and agent experience and increase the productivity of every conversation. Krisp technology processes over 75 billion minutes of conversations per month, improving the productivity and efficiency of hundreds of thousands of agents and CX professionals everywhere. Krisp is trusted by the world's largest global call centers and service providers, who report that Krisp has helped them achieve up to a 78% drop in noise complaints, an 8% increase in CSAT, and as much as a 10% decrease in AHT.
