This Memorial Day, we honor the men and women of the U.S. Armed Forces who gave their lives so that others could live theirs freely. We're grateful for their service, and we carry their memory with us, today

and every day.

This is what Sanas was built for.

Last weekend in Berkeley, a man was hit by a car, and the driver fled the scene. He only spoke Arabic. The first person to reach him was **Ava Fein**, a UC Berkeley pre-med student on her way home from her graduation ceremony. She opened the Sanas app.

"I saw what happened. Are you okay?"
"Do you need medical assistance?"

In real time, her English became Arabic. His answers came back in English. He was shaken but ok. He and Ava truly connected, without language barriers, at a time when human connection mattered.

That's what real-time translation is for.

Thank you, Ava, for showing us an incredible use case for Sanas in the wild!

Download your personal translator today: **https://lnkd.in/g9ArSBgX**

Hear that? 🔊

That's the sound of Sanas winning the GrowthX competition at ITW 2026 — the largest connectivity gathering on the planet (6,000 delegates, 120 countries).

GrowthX is judged Dragons Den-style by the product leaders inside Tier 1 carriers — Verizon, Telus and others. These are the people who buy, integrate, and operationalize what Sanas sells. Every pitch gets put through direct interrogation on real commercial impact.

Ours held up.

We took the Voice and Messaging track outright, and were the only company on the floor showing real innovation built for carriers.

Our very own **Chris Featherstone** lit up the stage with the case the room had been waiting for:

Carriers built the house - the pipes, the spectrum, the infrastructure - then let apps move in and charge rent. Sanas's speech AI infrastructure, delivered natively at the network layer, gives telecoms a level of audio and speech clarity they cannot achieve alone and the weapon to reclaim their role as service innovators. To take back margin. To defend ARPU. To stop subsidizing their own disruption. This is next-generation AI that unlocks real monetization, helping carriers sustain and secure their future.

Comment "Feather" 👇 and we'll send you a recording of the presentation.

The human voice carries meaning, emotion and intent. But when it travels through technology like microphones, networks and software, something gets lost.

Sanas's patented speech AI technology restores what technology takes away. We adjust clarity without erasing voice identity. We isolate emotion without changing content. We modify an accent while preserving every other quality that makes a voice unmistakably yours. Speech, broken into its most foundational components, then reconstructed precisely the way it should sound.

Try it for yourself in our speech playground: sanas.ai/#playground

If it's Speech, it's Sanas.

When Sandra Jirous first heard about Sanas, she was a skeptic.

She was inside a large enterprise and had her reasons for coming in cautious. But hearing a demo ...more

🏥 Healthcare organizations know that CAHPS and HCAHPS scores don't measure the care that’s delivered. They measure what patients understand about it.

That distinction is worth billions.

Patient experience scores now drive:
→ Value-based reimbursement
→ Star Ratings for health plans
→ Enrollment and retention
→ Regulatory performance and grievance reporting

And the biggest lever on those scores is communication clarity, not clinical excellence.

When patients and members leave every interaction confident they understood what was said, top-box satisfaction climbs. Communication-driven grievances drop. Star Ratings rise. Reimbursement strengthens.

Sanas helps healthcare organizations make every high-stakes conversation - treatment plans, discharge instructions, benefit explanations - unmistakably clear.

See how it works for healthcare teams: sanas.ai/healthcare
