DUKE MANUFACTURING CO.
Petitioner

v.

MARMON FOODSERVICE TECHNOLOGIES, INC.
Patent Owner

_____

Case: IPR2026-00484
Patent No. 9,976,750

DECLARATION OF NATASHA ZERBEY

I, Natasha Zerbey, hereby declare as follows:

1. I am an ERP Systems Analyst for Duke Manufacturing Co. ("Duke") and have held this position since approximately 2023. In this role, I am responsible for supporting Duke within the Epicor ERP system. I make this declaration in connection with the above-referenced IPR proceeding on behalf of Duke.

2. Prior to my current role I was the Materials Manager for Duke from approximately 2020-2023. In this role I was responsible for the Materials Team and coordinating material inventory for Duke at its Sedalia manufacturing facility.

3. Prior to that role, I was a Materials Control Supervisor for Duke from approximately 2013-2020. In this role I was responsible for coordinating material inventory for Duke at its Sedalia manufacturing facility.

4. In my roles as the Materials Manager and Materials Control Supervisor, I would maintain the schedules for production, including creating the Job Traveler that would go to production for assembling customer orders and product inventory.

5. Duke uses Epicor as its Enterprise Resource Planning software.

6. As part of Duke's implementation of Epicor, Duke uses a feature called Job Traveler in which a report is generated for each job.

7. A job is a work order for manufacturing and could include multiple units of the product (*e.g.*, multiple units of the same model of IRHS unit) being manufactured.

8. Duke uses the Job Traveler Reports generated by Epicor in manufacturing and fulfilling each and every job at its Sedalia, Missouri manufacturing facility. Duke has been using Epicor since February 2013.

9. For example, for any given job fulfilled at the Sedalia, Missouri manufacturing facility, a Job Traveler is printed out. The Job Traveler will provide a bill of materials and instructions for assembly of the job, including line items for any manuals that are to ship with the unit—such as the Operators Manual P/N 229945D for the Infrared Heatsink (IRHS) Holding Unit of Exhibit 1005.

10. For each job, an inspector would verify that the units are built correctly, have been tested, and that all of the documentation—including operator manuals—specified by the Job Traveler are included with each unit.

11. An example of a Job Traveler Report for an IRHS job from January 2014 is included as Attachment A to this declaration.

12. Notably, while manuals—such as the Operators Manual P/N 229945—are listed as a line item in the Job Traveler Report that is printed out for fulfillment of the job, the Job Traveler Report would not include the Revision number of the Operator Manual.

13. Instead, during fulfillment the currently effective revision of the operator manual is included with each unit.

14. Upon completion of each unit, the inspector would update Epicor. Likewise, upon completion of the job, Epicor would be updated to show that the entire job was completed. The Job Traveler and the corresponding data is further saved within Epicor, thus allowing tracking and retrieval of the production history of each completed job.

15. I declare under penalty of perjury that the foregoing is true and correct. Executed this 9th day of June 2026.

Natasha Zerbey
