Lexeme: unique device identifier RARE (0.16)

Definition:

1. *noun.* A unique device identifier (UDID) is a unique alphanumeric code assigned to a device such as a computer, smartphone, or tablet. It serves as a distinct identification number for the device and can be helpful in tracking and distinguishing it from other devices. The UDID is typically provided by the manufacturer and is stored in the device's hardware. It is commonly used by software developers, mobile app providers, and other service providers for purposes like user authentication, analytics, and device management. ***GPT3.5***
