NEW WORLD, NEW RULES

IBM eserver

Announcing the latest Intel-based servers

xSeries 200 & 220 The latest in affordable leading-edge servers for small business.
xSeries 300 Instant scalability and performance in a rack-mounted server.

→ More Intel-based servers

→ Intel-based servers

Affordable, industry-standard servers running Windows 2000/NT, Linux, Novell and other operating systems

- IBM eserver xSeries
- Netfinity
- NUMA-Q

Starting at $739
US only

→ UNIX servers

The most powerful, technologically advanced UNIX servers.

- IBM eserver pSeries
- RS/6000

Starting at $3,599
as low as $118/month (for 36 months)
US only

→ Integrated application servers

Run the most sophisticated business applications effortlessly and continuously. Cut complexity, slash bottom-line costs and speed implementation.

- IBM eserver iSeries
- AS/400

→ Mainframe servers

At the heart of e-business infrastructure. Maximum performance, real-time responsiveness, application flexibility, and simplified management for data and transaction serving.

- IBM eserver zSeries
- S/390 G5 and G6
- S/390 Multiprise

New tools to manage e-business

You've got to be able to grow your IT infrastructure fast...but you can't afford to grow your IT staff at the same rate. So you need more than new servers. The IBM @server Advantage delivers tools to manage your whole infrastructure.

- → Capacity Advantage
- → Availability Advantage
- → Customer Care Advantage
- → Solution Assurance Advantage
- → Financing Advantage

IBM @server Solution Offerings

IBM @server Solution Offerings are tested, best-of-breed application configurations built by IBM and IBM Business Partners, proven to solve specific e-business problems.

Operating systems

IBM offers the broadest range of operating systems of any server vendor and no one has more experience integrating these systems.

UNIX AND OPEN SYSTEMS

IBM eserver pSeries

Hardware

Large scale servers

Featuring the IBM RS/6000 SP

Learn more

- Targeting scientific and technical computing, high-level business computations and server consolidation
- Ideal for data and compute-intensive applications, including deep computing
- Call for pricing

Enterprise servers

Includes the IBM eserver pSeries 680 and IBM RS/6000 S80

Learn more

- Ideal for both medium-sized and large businesses
- Excellent for mission-critical commerical or e-business applications
- Providing the highest level of Web security, systems management and Web performance
- Starting at **$240,000**

Midrange rack servers

Includes the IBM eserver pSeries 660 and the IBM RS/6000 M80

Learn more

- Delivers outstanding power in a small footprint
- Advanced reliability, availability and serviceability
- NEBS Level 3 certification for telecommunications and other harsh environments
- Starting at **$20,995**

Rack optimized servers

Includes the IBM eserver pSeries 640 and the IBM RS/6000 B50

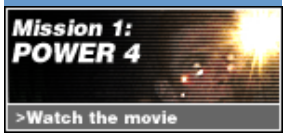
Learn more

- Entry-level size and pricing
- Optimized for the service provider and server farm environment
- Ideal packaging, availability and performance for ISPs and ASPs
- Starting at **$3,495**

Tower servers

Includes the IBM eserver pSeries Model 620

New UNIX server



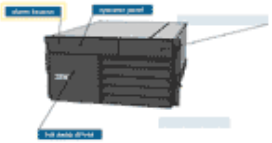
→ Uncover the mysteries of IBM's new UNIX server

→ **Buy UNIX servers online**

New UNIX resource

Virtual Briefing Center

IBM eserver pSeries 640



→ Click to take a virtual tour

Learn more

- Range of economical and powerful entries into the world of e-business
- Designed for collaborative and multi-user environments demanding high availability
- Starting at **$5,295**

Solutions

Explore our solutions and learn how IBM can help handle your mission-critical and data-intensive e-business applications.

Large scale servers

Large scale, high performance computing servers, such as the RS/6000 SP system, are used to solve the world's largest and most complex problems. From scientists modeling the effects of forces exerted by and on galaxies, to predicting localized weather phenomena, to corporations performing complex calculations on massive amounts of data, the RS/6000 SP has the highly scalable deep computing power required by today's scientific, technical and business applications.

IBM RS/6000

RS/6000 SP

Designed for speed, scalability, flexibility, manageability and availability, the RS/6000 is a distributed memory multinode computer which easily handles mission-critical applications. The SP can easily grow to meet the needs of increasing workloads, without disrupting critical operations in today's 24x7 environments.

RS/6000 SP: Planning Vol. 1, Hardware and Physical Environment

RS/6000 SP
Planning Vol. 1,
Hardware and Physical Environment

Document Number GA22-7280-09

Note
Before using this information and the product it supports, be sure to read the general information under Notices.

Ninth edition (April 2001)

This edition replaces GA22-7280-08. Significant changes or additions to the text or illustrations are indicated by a vertical line (|) to the left of the change.

This edition applies to Version 3 Release 2 of IBM Parallel System Support Programs for AIX (PSSP), which runs on the IBM RS/6000 SP, and to all subsequent releases and modifications until otherwise indicated in new editions.

IBM welcomes your comments. A form for readers' comments may be provided at the back of this publication, or you may address your comments to the following address:

Summary of changes

- GA22-7280-09

Introducing the RS/6000 SP

- RS/6000 SP system overview
- Hardware planning
  - Processor nodes
  - Frames
  - Control workstations
  - Switches
  - SP Switch Router
  - Network communications

Ex.1038 / Page 12 of 29
Intel Corporation

- Communication and I/O adapters
- Hard disk drives
- Installation site planning
  - Electrical power planning
  - Environmental planning
  - Floor planning
- RS/6000 SP system upgrades

375 MHz POWER3 SMP High Node (F/C 2058)

- Description
  - PCI bus description
- Requirements and options
  - F/C 2058 requirements
  - F/C 2058 options
  - Processor requirements and options
  - Memory requirements and options
  - Hard disk drive requirements and options
  - Switch and communication adapter requirements and options

375 MHz POWER3 SMP Wide Node (F/C 2057)

- Description
  - PCI bus description
- Requirements and options
  - F/C 2057 requirements
  - F/C 2057 options
  - Processor requirements and options
  - Memory requirements and options
  - Hard disk drive requirements and options
  - Switch and communication adapter requirements and options

375 MHz POWER3 SMP Thin Node (F/C 2056)

Ex.1038 / Page 13 of 29
Intel Corporation

- Description
  - PCI bus description
- Requirements and options
  - F/C 2056 requirements
  - F/C 2056 options
  - Processor requirements and options
  - Memory requirements and options
  - Hard disk drive requirements and options
  - Switch and communication adapter requirements and options

POWER3 SMP High Node (F/C 2054)

- Description
  - PCI bus description
- Requirements and options
  - F/C 2054 requirements
  - F/C 2054 options
  - Processor requirements and options
  - Memory requirements and options
  - Hard disk drive requirements and options
  - Switch and communication adapter requirements and options
- SP Expansion I/O Unit (F/C 2055)
  - Hard disk drive options

332 MHz SMP Wide Node (F/C 2051)

- Description
  - PCI bus description
- Requirements and options
  - F/C 2051 requirements
  - F/C 2051 options

Ex.1038 / Page 14 of 29
Intel Corporation

- Processor requirements and options
- Memory requirements and options
- Hard disk drive requirements and options
- Switch and communication adapter requirements and options

332 MHz SMP Thin Node (F/C 2050)

- Description
  - PCI bus description
- Requirements and options
  - F/C 2050 requirements
  - F/C 2050 options
  - Processor requirements and options
  - Memory requirements and options
  - Hard disk drive requirements and options
  - Switch and communication adapter requirements and options

SP-attached servers (RS/6000 M/T 7017 and 7026)

- SP-attached server overview
  - System highlights
  - How the SP system views the SP-attached server
- SP-attached server installation requirements
  - SP system requirements for the SP-attached server
  - SP-attached server physical requirements
  - SP-attached server switch adapter requirements
  - SP-attached server network media card requirements
  - SP-attached server software requirements
- Planning the SP-attached server network interface
  - Connecting the SP-attached server to the control workstation
  - Connecting the SP-attached server to the SP Switch
  - Configuring Service Director

Clustered Enterprise Server system

Ex.1038 / Page 15 of 29
Intel Corporation

- Clustered Enterprise Server overview
- Clustered Enterprise Server installation requirements

  - Clustered Enterprise Server system requirements
  - Clustered Enterprise Server network media card requirements
  - Clustered Enterprise Server software requirements

- Planning the Clustered Enterprise Server network

  - Planning for SP LAN Ethernet hardware
  - Planning for the RS-232 cables
  - Configuring Service Director

Tall frames - 1.93 m (Model 550, 555, F/C 1550, 2031, 2032)

- Tall frame overview
- Model 550 frames

  - Model 550 non-switched configuration
  - Model 550 SP Switch-8 configuration
  - Model 550 single-stage SP Switch and SP Switch2 configuration
  - Model 550 two-stage SP Switch and SP Switch2 configuration

- Model 555 single-stage switch configuration
- Expansion frames (F/C 1550)

  - Using F/C 1550 non-switched expansion frames
  - Using F/C 1550 switched expansion frames

- SP Switch frames (F/C 2031, 2032)

Short frames - 1.25 m (Model 500 and F/C 1500)

- Short frame overview
- Model 500 frames

  - Model 500 non-switched configuration
  - Model 500 switched configuration

- Expansion frames (F/C 1500)

  - Using F/C 1500 non-switched expansion frames

Ex.1038 / Page 16 of 29
Intel Corporation

Control workstations

- Planning for the control workstation
  - Control workstation interface adapters
- Service Director
  - What is Service Director?
  - Hardware requirements

SP Switch (F/C 4011 and F/C 4008)

- Switch overview
- SP Switch (F/C 4011)
- SP Switch-8 (F/C 4008)
- Switch adapters (F/C 4020, 4022, and 4023)
- Special switch adapters (F/C 4021 and RS/6000 F/C 8396)
- SP Switch frame (F/C 2031)
- Planning switch cable networks

SP Switch2 (F/C 4012)

- SP Switch2 overview
- SP Switch2 Adapter (F/C 4025)
- SP Switch2 frame (F/C 2032)
- Planning SP Switch2 cable networks

SP Switch Router (M/T 9077 04S and 16S)

- SP Switch Router description
- SP Switch Router installation requirements
  - System requirements
  - Physical requirements
  - Adapter requirements
  - Network media card requirements
  - Software requirements
- Planning for the SP Switch Router network interface
  - Connecting the SP Switch Router to the control workstation

Ex.1038 / Page 17 of 29
Intel Corporation

- Connecting the SP Switch Router to the SP Switch
- Planning for network media cards and memory options

Communication cabling

- Planning the location of the control workstation based on cable length
  - RS-232 cable provided by IBM
- Planning for coaxial LAN cabling
  - Ethernet LAN and Ethernet cable provided by IBM
  - Requirements for coaxial cables
  - Customer responsibilities for coaxial cabling
  - Connecting station protectors
  - Labeling coaxial cables
  - Planning for cabling tests
  - Preparing a site for coaxial cabling
  - Routing indoor cabling
- Planning for unshielded twisted pair (UTP) cabling
  - Requirements for twisted-pair cabling
- Typical SP LAN topologies
  - Shared or switched 100BASE-TX network
  - Heterogeneous 10/100 Mbps network
  - Shared 10BASE2 network
  - Segmented 10BASE2 network
  - Switched 10BASE2 network
- Planning for switch cabling
  - Considerations for future switch expansion
  - Switch-to-node cabling
  - Planning for switch-to-switch cabling

Communication adapter requirements

- PCI bus I/O adapter requirements for SMP nodes

Ex.1038 / Page 18 of 29
Intel Corporation

- PCI bus group and slot descriptions
- PCI adapter maximum quantities
- PCI adapter plugging rules and restrictions
- Suggested PCI adapter quantities for optimum operation
- MCA bus adapter requirements

PCI communication adapters

- Short-Wave Serial HIPPI PCI adapter (F/C 2732)
  - Feature characteristics
  - Feature components
  - Customer components
  - Hardware requirements
  - Software requirements
- Long-Wave Serial HIPPI PCI adapter (F/C 2733)
  - Feature characteristics
  - Feature components
  - Customer components
  - Hardware requirements
  - Software requirements
- FDDI SK-NET LP SAS PCI adapter (F/C 2741)
  - Feature characteristics
  - Feature components
  - Customer components
  - Hardware requirements
  - Software requirements
  - FDDI typical SP configuration
  - External cabling routing for FDDI cables
- FDDI SK-NET LP DAS PCI adapter (F/C 2742)
  - Feature characteristics
  - Feature components
  - Customer components
  - Hardware requirements
  - Software requirements
  - FDDI typical SP configuration

Ex.1038 / Page 19 of 29
Intel Corporation

    - External cabling routing for FDDI cables
- FDDI SK-NET UP DAS PCI adapter (F/C 2743)
    - Feature characteristics
    - Feature components
    - Customer components
    - Hardware requirements
    - Software requirements
    - FDDI typical SP configuration
- S/390 ESCON Channel PCI adapter (F/C 2751)
    - Feature characteristics
    - Feature components
    - Customer components
    - Hardware requirements
    - Required Software
- 8-Port Async PCI adapter EIA 232/RS-422 (F/C 2943)
    - Feature characteristics
    - Feature components
    - Customer supplied components
    - Hardware requirements
    - Required software
- WAN 128-Port Async PCI adapter EIA-232 (F/C 2944)
    - Feature characteristics
    - Customer supplied components
    - Hardware requirements
    - Required software
- ARTIC960Hx 4-Port Selectable PCI adapter (F/C 2947)
    - Feature characteristics
    - Feature components
    - Hardware requirements
    - Required software
- 2-Port Multiprotocol X.25 PCI adapter (F/C 2962)

Ex.1038 / Page 20 of 29
Intel Corporation

    - Feature characteristics
    - Customer supplied components
    - Hardware requirements
    - Required software
- TURBOWAYS 155 UTP ATM PCI adapter (F/C 2963)
    - Feature characteristics
    - Customer components
    - Hardware requirements
    - Required software
    - ATM cable routing
- 10/100 Ethernet 10BASE-TX PCI adapter (F/C 2968)
    - Feature characteristics
    - Feature components
    - Customer supplied components
    - Hardware requirements
    - Required software
- Gigabit Ethernet - SX PCI adapter (F/C 2969)
    - Feature characteristics
    - Feature components
    - Customer supplied components
    - Hardware requirements
    - Required software
- 10BASE2 and 10BASE-T (BNC/RJ-45) Ethernet LAN PCI adapter (F/C 2985)
    - Feature characteristics
    - Feature components
    - Customer supplied components
    - Hardware requirements
    - Required software
    - Cable routing
- 10BASE5 and 10BASE-T (AUI/RJ-45) Ethernet LAN PCI adapter (F/C 2987)
    - Feature characteristics
    - Feature components
    - Customer supplied components

Ex.1038 / Page 21 of 29
Intel Corporation

- Hardware requirements
- Required software
- Cable routing
- TURBOWAYS 155 ATM PCI adapter (F/C 2988)
    - Feature characteristics and requirements
    - Customer components
    - Required software
    - ATM cable routing
- Four-Port 10/100 BASE-TX Ethernet PCI adapter (F/C 4951)
    - Feature characteristics
    - Feature components
    - Customer supplied components
    - Hardware requirements
    - Required software
- Crytographic Coprocessor PCI adapter (F/C 4958)
    - Feature characteristics
    - Feature components
    - Limitations
    - Hardware requirements
    - Software requirements
- High-Speed Token-Ring PCI adapter (F/C 4959)
    - Feature characteristics
    - Feature components
    - Customer components
    - Hardware requirements
    - Software requirements
    - Typical SP system configuration
- SCSI-2 Ultra/Wide DE PCI adapter (F/C 6204)
    - Feature characteristics
    - Customer components
    - Hardware requirements
    - Software requirements
    - Cable options

Ex.1038 / Page 22 of 29

Power and electrical requirements

- Preliminary power planning considerations
  - Evaluating primary computer power service
  - Obtaining power system backup devices
  - Evaluating location and availability of receptacles
  - Installing emergency power-off controls
  - Protecting branch circuits and connecting ground conductors
- Evaluating SP system power requirements
  - Scalable Electric Power Base Unit (SEPBU)
  - SEPBU input branch circuit requirements
  - Evaluating ac power cables, plugs, and receptacles
  - SP Frame Redundant Power Supply (F/C 3885, 3886)
- Planning for power requirements of SP frames and features
  - Using the SP frame power computation worksheet

Environmental factors

- Environmental specifications of the RS/6000 SP
  - Operating, shipping, and storage environment
  - Recommended operating point and range
  - Acoustical environment of the RS/6000 SP system
- Evaluating your site environment
  - SP thermal output and cooling requirements
  - Evaluating electromagnetic interference
  - Evaluating electrostatic discharge
  - Evaluating other environmental factors
  - SP frame tie-down considerations

Floor planning

- Planning your RS/6000 SP installation site
  - Determining the devices to include in your system

Ex.1038 / Page 25 of 29
Intel Corporation

- Developing your floor plan
- Planning your site alterations
- RS/6000 SP physical specifications and illustrations
  - SP system physical dimensions and weights
  - Wooden shipping container dimensions and weights
  - Site floor preparation considerations
  - Service clearance specifications for frames
  - Service clearance and frame footprint illustrations
  - Multi-frame system floor planning and illustrations
  - RS/6000 SP system floor load analysis

Appendix A. SP system upgrades, conversions, and feature additions

- Ordering requirements for upgrades
  - Indentifying frame model numbers
- Adding nodes
  - Adding 375 MHz POWER3, POWER3, and 332 MHz SMP Thin and Wide Nodes
  - Adding 375 MHz POWER3 and POWER3 SMP High Nodes
- Adding frames
- Adding switches
- Upgrading, replacing, and relocating nodes
  - Upgrading SMP-type nodes
  - Replacing withdrawn processor nodes
  - Relocating processor nodes
- Upgrading SP frames
  - Upgrading Model 500 and F/C 1500 to Model 550 and F/C 1550
  - Upgrading Model T70 to Model 550
- Upgrading power systems in early SP frames
  - Upgrading 2.01 m frames from 7.0 to 10.5 kW SEPBUs
  - Upgrading 1.25 m frames from 3.5 to 5.0 kW SEPBUs
  - Upgrading 2.01 m frames with PDU to 10.5 kW SEPBU

Ex.1038 / Page 26 of 29
Intel Corporation

- Upgrading standard SEPBUs to Redundant Power Supply
    - Upgrading SEPBUs with 5.0 kW BPRs to Redundant Power Supply
    - Upgrading SEPBUs with 3.5 kW BPRs to Redundant Power Supply

Appendix B. SEPBU Power Control Interface

- Power Control Interface function
- Typical configurations
- Power Control Interface cable planning
- System monitor

Appendix C. MCA communication adapters

- MCA Adapter Descriptions
    - SCSI-2 High Performance External I/O Controller (F/C 2410) MCA
    - Enhanced SCSI-2 Differential Fast/Wide Adapter/A (F/C 2412) MCA
    - SCSI-2 Fast/Wide Adapter/A (F/C 2415) MCA
    - 4-Port Multiprotocol Communications Controller - (F/C 2700) MCA
    - Fiber Distributed Data Interface - FDDI - (F/C 2724, 2723) MCA
    - High Performance Parallel Interface - HIPPI - (F/C 2735) MCA
    - S/390 ESCON Channel Emulator Adapter (F/C 2754) MCA
    - Block Multiplexer Channel Adapter - BMCA - (F/C 2755) MCA
    - ESCON Control Unit Adapter (F/C 2756) MCA
    - 8-Port Async Adapter - EIA-232 - (F/C 2930) MCA
    - X.25 Interface Co-Processor/2 - (F/C 2960) MCA
    - Token-Ring High Performance Network Adapter (F/C 2970) MCA
    - Auto Token-Ring LANstreamer MC 32 Adapter - (F/C 2972) MCA
    - Ethernet High Performance LAN Adapter (F/C 2980) MCA
    - TURBOWAYS 155 ATM Adapter (F/C 2989) MCA
    - High-Performance Ethernet LAN Adapter AUI and 10Base-T (F/C 2992) MCA
    - High-Performance Ethernet LAN Adapter 10Base2 (BNC) (F/C 2993) MCA
    - 10/100 Ethernet Twisted Pair MC Adapter (F/C 2994) MCA
    - Ethernet 10BaseT Transceiver - (F/C 4224) MCA
    - 9333 High Performance Subsystem Adapter (F/C 6212) MCA
    - SSA 4-Port Adapter (F/C 6214) MCA
    - Enhanced SSA 4-Port Adapter (F/C 6216) MCA
    - SSA 4-Port RAID Adapter (F/C 6217) MCA
    - Micro Channel SSA Multi-Initiator/RAID EL Adapter (F/C 6219) and SSA Fast-Write Cache Option (F/C 6222) MCA

Intel Corporation

Appendix D. Withdrawn RS/6000 SP features

- Withdrawn processor nodes
  - Available processor node comparisons
  - Withdrawn POWER3 SMP Thin Node (F/C 2052)
  - Withdrawn POWER3 SMP Wide Node (F/C 2053)
- Withdrawn PCI adapters
  - Auto LANstreamer Token Ring PCI Adapter (F/C 2920)

Notices

- Trademarks
- Electronic emissions notices
  - Federal Communications Commission (FCC) statement
  - European Union (EU) statement
  - United Kingdom telecommunications safety requirements
  - Industry Canada compliance statement
  - For installations in Japan:
  - Electromagnetic interference (EMI) statement - Taiwan
  - Radio protection for Germany
