In this compelling episode of Simulated Reality, we sit down with Nitesh Varshney, SVP Engineering & Managing Director at Sanas, to uncover the remarkable journey of a company that started with a moment of injustice and transformed it into a global movement. Their discussion traces the company's origins—a friend fired because of his accent, three students determined to change that, and a mission that grew into a multi-year scientific pursuit across accents, dialects, and languages.

Nitesh takes us inside the science, engineering, and emotion behind Sanas' real-time speech AI—technology that preserves identity while enhancing clarity, giving millions the confidence to communicate without fear of bias, judgment, or misunderstanding. From growing to $50M ARR in two years to inspiring customer support agents with confidence, Sanas is not just solving a technical problem—it's redefining human connection. This episode explores voice, authenticity, belonging, and the future of global communication through tech that finally listens to who we really are.
