EagleView® Launches iPad® and Tablet Mobile Apps

EagleView Technologies, the leader in aerial roof measurements, announces the release of its mobile application for iPad and Tablet devices. The application has the same features as the existing iPhone® and Android™ apps, including the ability to take and edit photos that can be added to an EagleView report. The app is optimized to take full advantage of the larger displays and higher screen resolutions offered on the iPad and Android-powered tablets.

“The use of iPads and tablet devices in the field has increased significantly as more people become comfortable with using these technologies in their everyday business processes,” said Heidi Ellsworth, vice president sales and marketing for EagleView Technologies. “We’re excited to give them one more tool to help increase their productivity.”

As with the smartphone apps, users will be able to order reports by either entering an address or using their current location. The app provides access to past orders and offers the option to regenerate a previous report to include user-submitted photographs. The built-in photo editor allows users to capture images of a property and mark areas of the photo with damage or weather icons, insert captions or finger draw to highlight a specific area of a photo. Up to six annotated images can be uploaded and sequenced by the user to become part of the aerial measurement report.

The application features crisp backgrounds, an easy-to-use interface and simple navigation. The EagleView app for tablet devices and the iPad is available now. Download the apps for free in the [Android marketplace](#) and [iTunes store](#).
