EagleView® Technologies Introduces Extended Coverage

EagleView Technologies, the leader in aerial roof measurements, announces [Extended Coverage](#) for Premium Reports with the latest release of its patented measurement software platform. The release features an integrated and proprietary sourcing service known as ImageHub™ that accesses imagery from multiple sources and types. This extended coverage capability meets the demand for greater geographic coverage as sought by both the insurance and contractor sectors.

ImageHub currently provides EagleView with access to seven different image libraries nationwide with additional libraries planned across the coming months. This next generation software platform also supports new image formats, resolution levels and image schemas. Chris Pershing, CTO and co-founder of EagleView Technologies, said, "This platform release coupled with the integration of ImageHub marks another level of EagleView innovation in aerial measurement technology as we continue to set the standard as the market-leading solutions provider."

The combination of these advanced technologies allows the company to provide reports for properties that previously could not be measured. EagleView now offers not only the most accurate measurement reports within the industry, but also the broadest image set available.
