Apple iMac "PowerPC G3" 333 MHz 1999 Specs

iMac - M7440LL/A - iMac,1 - M4984

About This iMac

The iMac line of devices from apple introduced in 1999 which was also the period that the internet was developing and catching up on everybody. Apple used that as a means to propagate their innovative design which unlike most of the other computers then did not have an external Central processing Unit. This was also one of the first devices of its time to incorporate the now common USB port while simultaneously leaving out the popular floppy disk drive a mark that the iMac was certainly futuristic which was also communicated in its ice-bondi blue color.
