Thanks Mark.

I am in Peru now, headed for Machu Pichu.

I was able to download Shujun's presentation & will take a look at it and reply with any comments.

Hi John -

I'm attaching Shujun's slides on lab R&D around accuracy. Sorry about the size but it includes a lot of read stacks. This doesn't include production and/or diversity panels but is more focused on specific problems. On the last page is a grid where we evaluate the basic approaches. The only one that we are planning to drop from the agenda is the low concentration phasing since there are others doing this (GNOM and Moleculo).

The price for the used CHEF system was \$1000.

^^
