Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

UTILITY PATENT APPLICATION TRANSMITTAL (Only for new nonprovisional applications under 37 C.F.R. § 1.53(b))	Attorney Docket No.	EQUI0001
	First Inventor or Application Identifier	Samaniego et al.
	Title	Automated Processing and Delivery of Media to Web Servers
	Express Mail Label No.	EL090780449US

APPLICATION ELEMENTS See MPEP chapter 600 concerning utility patent application contents.	ADDRESS TO: Assistant Commissioner for Patents Box Patent Application Washington, DC 20231
1. ☒ * Fee Transmittal Form (e.g., PTO/SB/17) (Submit an original and a duplicate for fee processing)	5. ☐ Microfiche Computer Program (Appendix)
2. ☒ Specification [Total Pages 34] (preferred arrangement set forth below) - Descriptive title of the invention - Cross References to Related Applications - Statement Regarding Fed sponsored R & D - Reference to Microfiche Appendix - Background of the invention - Brief Summary of the invention - Brief Description of the Drawings (if filed) - Detailed Description - Claim(s) - Abstract of the Disclosure	6. Nucleotide and/or Amino Acid Sequence Submission (if applicable, all necessary) a. ☐ Computer Readable Copy b. ☐ Paper Copy (identical to computer copy) c. ☐ Statement verifying identity of above copies
3. ☒ Drawing(s) (35 U.S.C. 113) [Total Sheets 16]	ACCOMPANYING APPLICATION PARTS
4. Oath or Declaration [Total Pages 3] a. ☒ Newly executed (original or copy) b. ☐ Copy from a prior application (37 C.F.R. § 1.63(d)) (for continuation/divisional with Box 16 completed) i. ☐ DELETION OF INVENTOR(S) Signed statement attached deleting inventor(s) named in the prior application, see 37 C.F.R. §§ 1.63(d)(2) and 1.33(b).	7. ☒ Assignment Papers (cover sheet & document(s))
*NOTE FOR ITEMS 1 & 13: IN ORDER TO BE ENTITLED TO PAY SMALL ENTITY FEES, A SMALL ENTITY STATEMENT IS REQUIRED (37 C.F.R. § 1.27), EXCEPT IF ONE FILED IN A PRIOR APPLICATION IS RELIED UPON (37 C.F.R. § 1.28).	8. ☐ 37 C.F.R. § 3.73(b) Statement ☒ Power of Attorney (when there is an assignee)
	9. ☐ English Translation Document (if applicable)
	10. ☒ Information Disclosure Statement (IDS)/PTO-1449 ☒ Copies of IDS Citations
	11. ☐ Preliminary Amendment
	12. ☒ Return Receipt Postcard (MPEP 503) (Should be specifically itemized)
	13. ☒ * Small Entity Statement(s) ☐ Statement filed in prior application, Status still proper and desired (PTO/SB/09-12)
	14. ☐ Certified Copy of Priority Document(s) (if foreign priority is claimed)
	15. ☐ Other: _____

16. If a CONTINUING APPLICATION, check appropriate box, and supply the requisite information below and in a preliminary amendment:

☐ Continuation ☐ Divisional ☐ Continuation-in-part (CIP) of prior application No: _____

Prior application information: Examiner _____ Group / Art Unit: _____

For CONTINUATION or DIVISIONAL APPS only: The entire disclosure of the prior application, from which an oath or declaration is supplied under Box 4b, is considered a part of the disclosure of the accompanying continuation or divisional application and is hereby incorporated by reference. The incorporation can only be relied upon when a portion has been inadvertently omitted from the submitted application parts.

17. CORRESPONDENCE ADDRESS				
☒ Customer Number or Bar Code Label		22862		or ☐ Correspondence address below
(Insert Customer No. or Attach bar code label here)				
Name				
Address				
City	State	Zip Code		
Country	Telephone	Fax		

Name (Print/Type)	Michael A. Glenn	Registration No. (Attorney/Agent)	30,176
Signature		Date	10/21/99

Burden Hour Statement: This form is estimated to take 0.2 hours to complete. Time will vary depending upon the needs of the individual case. Any comments on the amount of time you are required to complete this form should be sent to the Chief Information Officer, Patent and Trademark Office, Washington, DC 20231. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Assistant Commissioner for Patents, Box Patent Application, Washington, DC 20231.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

FEE TRANSMITTAL for FY 1999

Patent fees are subject to annual revision.
Small Entity payments must be supported by a small entity statement,
otherwise large entity fees must be paid. See Forms PTO/SB/09-12.
See 37 C.F.R. §§ 1.27 and 1.28.

TOTAL AMOUNT OF PAYMENT (\$) 879.00

Complete if Known

Application Number	Unassigned
Filing Date	Herewith
First Named Inventor	Samaniego et al.
Examiner Name	Unassigned
Group / Art Unit	Unassigned
Attorney Docket No.	EQUI0001

METHOD OF PAYMENT (check one)

1. ☐ The Commissioner is hereby authorized to charge indicated fees and credit any over payments to:

Deposit Account Number 07-1445

Deposit Account Name Michael A. Glenn

☒ Charge Any Additional Fee Required Under 37 CFR §§ 1.16 and 1.17

2. ☒ Payment Enclosed:

☒ Check ☐ Money Order ☐ Other

AUTOMATED PROCESSING AND DELIVERY OF MEDIA TO WEB SERVERS

BACKGROUND OF THE INVENTION

TECHNICAL FIELD

The invention relates to software systems. More particularly, the invention relates to an Internet server-based software system that provides delivery of automated graphics and other media to Web sites for access by an end user or consumer.

DESCRIPTION OF THE PRIOR ART

Most Web sites today are primarily handmade. From the guy publishing a simple online technology newsletter from his home, to the Fortune 1000 company's multi-tiered site with hundreds of pages of text, images, and animations, the Web developer and each of his HTML-coding and graphics-producing coworkers toil page by page and image by image. Thousands of established online companies employ hundreds of highly-skilled workers just to produce and maintain their Web sites. After all, the Web is now a major selling vehicle and marketing medium for many of these companies. The Web has even sprouted service industries such as, for example, public companies with multi-billion dollar valuations created just to consult and produce Web sites for others.

Most Web developers who use established WYSIWYG tools in the industry still must produce each page on their Web site one by one. The same rate applies to preparing and placing images, animations, and other visual assets. Each page represents its own set of issues ranging from whether to use GIF, JPEG, or PNG file formats, to finding the optimum bit depth for each image to ensure the fastest downloading through the different browsers of the consumer. The bottlenecked state of the customer's workflow to produce graphics for Web pages can be described as follows:

Current Workflow for Creating Web Graphics

- Original Artwork/Asset Creation
 - Use third-party point products
- Asset Editing
 - Scale/reduce/slice
- Asset Format Conversion
 - JPEG/GIF/PNG
- Asset Staging
 - Place in Web file system
 - Edit HTML
- Create/Modify HTML for particular page
- Store HTML on Web server
- View final pages
- Repeat process for each version of each graphic on each page

Estimated time

- Two hours per page times the number of pages

Also, from a user's perspective, the current state of the art is to offer the consumer zooming and panning capabilities so that by clicking on an image the consumer can view more closely or from a different angle. On the horizon are pages with three-dimensional imagery that enable a user to move around a page that can look more like a room than a brochure. While interesting, these features are merely incremental improvements to a consumer's surfing experience.

D. C. A. Bulterman, *Models, Media, and Motion: Using the Web to Support Multimedia Documents*, Proceedings of 1997 International Conference on Multimedia Modeling, Singapore, 17-20 Nov. 1997 discloses "an effort underway by members of industry, research centers and user groups to define a standard document format that can be used in conjunction with time-based transport protocols over the Internet and intranets to support rich multimedia presentations. The paper outlines the goals of the W3C's Synchronized Multimedia working group and presents an initial description of the first version of the proposed multimedia document model and format."

Attorney Docket No. EQUI0001

Text and Graphics on UMI's ProQuest Direct: The Best (yet) of both Worlds, Online, vol. 21, no. 2, pp. 73-7, March- April 1997 discloses an information system that offers "periodical and newspaper content covering a wide range of business, news, and professional topics... letting the user search both text and graphics and build the product to suit. Articles can be retrieved in varying levels of detail: citation, abstracts, full text, and text with graphics. Images come in two flavors: Page Image, a virtual photocopy, and Text+Graphics, in which graphics are stored separately from the text and are manipulable as discrete items. ...[The system] comes in two versions: Windows and Web."

John Mills Dudley, *Network-Based Classified Information Systems*, AU-A-53031/98 (27/08/98) discloses a "system for automatically creating databases containing industry, service, product and subject classification data, contact data, geographic location data (CCG-data) and links to web pages from HTML, XML, or SGML encoded web pages posted on computer networks such as Internets or Intranets....The... databases may be searched for references (URLs) to web pages by use of enquiries which reference one or more of the items of the CCG-data. Alternatively, enquiries referencing the CCG-data in the databases may supply contact data without web page references. Data duplication and coordination is reduced by including in the web page CCG-data display controls which are used by web browsers to format for display the same data that is used to automatically update the databases."

Cordell *et al*, *Automatic Data Display Formatting with A Networking Application*, U.S. Patent No. 5,845,084 (Dec. 1, 1998) discloses a placeholder image mechanism. "When a data request is made, the data transfer rate is monitored. When the receive data transfer rate is slow, and the data contains an embedded graphical image of unknown dimensions, a small placeholder image is automatically displayed for the user instead of the actual data. The small placeholder image holds a place on a display device for the data or the embedded graphical image until the data or embedded graphical image is received. When embedded graphical image is received, the placeholder image is removed, and the display device is reformatted to display the embedded graphical image."

Jonathon R. T. Lewis, *System For Substituting Tags For Non-Editable Data Sets In Hypertext Documents And Updating Web Files Containing Links Between Data Sets Corresponding To Changes Made To The Tags*, U.S. Patent No. 5,355,472 (Oct. 11, 1994) discloses a "hypertext data processing system wherein data sets participating in the hypertext document may be edited, the data processing system inserting tags into the

Attorney Docket No. EQUI0001

data sets at locations corresponding to the hypertext links to create a file which is editable by an editor and the data processing system removing the tags, generating a revised data set and updating the link information after the editing process. Its main purpose is to preserve the linking hierarchy that may get lost when the individual data sets get modified."

Wistendahl *et al*, *System for Mapping Hot Spots in Media Content Interactive Digital Media Program*, U.S. Patent No. 5,708,845 (Jan. 13, 1998) discloses a "system for allowing media content to be used in an interactive digital media (IDM) program [that] has Frame Data for the media content and object mapping data (N Data) representing the frame addresses and display location coordinates for objects appearing in the media content. The N Data are maintained separately from the Frame Data for the media content, so that the media content can be kept intact without embedded codes and can be played back on any system. The IDM program has established linkages connecting the objects mapped by the N Data to other functions to be performed in conjunction with display of the media content. Selection of an object appearing in the media content with a pointer results in initiation of the interactive function. A broad base of existing non-interactive media content, such as movies, videos, advertising, and television programming can be converted to interactive digital media use. An authoring system for creating IDM programs has an object outlining tool and an object motion tracking tool for facilitating the generation of N Data. In a data storage disk, the Frame Data and the N Data are stored on separate sectors. In a network system, the object mapping data and IDM program are downloaded to a subscriber terminal and used in conjunction with presentation of the media content."

Rogers *et al*, *Method for Fulfilling Requests of A Web Browser*, U.S. Patent No. 5,701,451 (Dec. 23, 1997) and Lagarde *et al*, *Method for Distributed Task Fulfillment of Web Browser Requests*, U.S. Patent No. 5,710,918 (Jan. 20, 1998) disclose essentially "improvements which achieve a means for accepting Web client requests for information, obtaining data from one or more databases which may be located on multiple platforms at different physical locations on an Internet or on the Internet, processing that data into meaningful information, and presenting that information to the Web client in a text or graphics display at a location specified by the request."

Tyan *et al*, *HTML Generator*, European Patent Application No. EP 0843276 (May 20, 1998) discloses "generating an HTML file based on an input bitmap image, and is particularly directed to automatic generation of an HTML file, based on a scanned-in

Attorney Docket No. EQUI006

document image, with the HTML file in turn being used to generate a Web page that accurately reproduces the layout of the original input bitmap image."

TrueSpectra has a patent pending for the technology employed in its two products, IrisAccelerate and IrisTransactive. These products are designed for zooming and panning and simple image transformations and conversions, respectively. They support 10 file formats and allow developers to add new file formats via their SDK. They do not require the use of Flashpix for images. However, their documentation points out that performance is dependent on the Flashpix format. The system would be very slow if a non-Flashpix format was used.

TrueSpectra allows the image quality and compression to be set for JPEGs only. The compression setting is set on the server and all images are delivered at the same setting.

TrueSpectra has a simple caching mechanism. Images in the cache can be cleared out automatically at certain times and it does not have any dependency features for image propagation. The Web server needs to be brought down in order to update any original assets.

TrueSpectra does not require plug-ins to operate features such as zooming/panning or compositing, but suggests using their plug-ins for better performance. The alternative to plug-ins is using their Javascript or active server page technology. These technologies are used by many Web sites to provide interactivity, but not all Web browsers work correctly with these technologies.

In their latest version, TrueSpectra fixed their software so that communication to the server will not have to be through a certain port. Using TrueSpectra without a port requires the system to use Javascript or Active Server Pages. This requirement is not always possible so firewall issues remain.

TrueSpectra relies on Flashpix as its native file format and does not support media types such as multi-GIFs and sound formats. Flashpix files are typically larger than most file formats. Access to files is faster for zooming and panning, but appears to be quite slow.

The key to IrisTransactive is the compositing subsystem. It requires three things to build a shopping solution using image composition.

- 1) The original images must be created. It is suggested that the image be converted to Flashpix for better performance.
- 2) All of the individual images must be described in XML using the image composer program. The program allows the editor to specify anchor points, layer attributes, and layer names. The resulting file is between 5k and 50k.
- 3) The Web designer must place HTML referring to the XML in the Web site. By specifying parameters to the XML, the Web designer can turn on or off layers.

The herein above process for compositing images enables Web designers to create shopping sites. However, a lot of overhead is the result. The XML documents add 5k-50k to a Web site. The compositing commands that are embedded in the HTML are difficult to understand. And, because the compositing feature requires several steps to implement, it is not suitable for every image on a Web site. The process seems to be designed for the specific purpose of shopping.

The disclosed prior art fail to provide systems and methodologies that result in a quantum leap in the *speed* with which they can modify and add images, video, and sound to sites, in the *volume* of data they can publish internally and externally, and in the *quality* of the output. The development of such an automated media delivery system would constitute a major technological advance.

It would be advantageous to empower an end user with flexibility and control by providing *interactive* page capabilities.

It would be advantageous from an end user's perspective to generate Web pages that contain *active* graphics. For example, clicking on a Corvette image will cause a simple menu to pop up suggesting alternative colors and sizes in which to see the car. Clicking on portions of the image, such as a fender, can call up a close-in view of the fender.

It would be advantageous to provide an automated graphics delivery system that becomes part of the *Web site infrastructure* and operates as part of the *Web page transaction* and that thereby provides a less expensive and less time-consuming process.

It would be advantageous to provide a system for automated processing and delivery of media (images, video, and sound) to a Web server whereby it eliminates the laborious

Attorney Docket No. EQUI000

post-production and conversion work that must be done before a media asset can be delivered on a Web server.

It would be advantageous to create a dynamic Web site, wherein images are generated on demand from original assets, wherein only the original assets need to be updated, and wherein updated changes propagate throughout the site.

It would be advantageous to provide a system that generates media based on current Web server traffic thereby optimizing throughput of the media through the Web server.

It would be advantageous to provide a system that generates media that is optimized for the Web client, wherein client connection speed determines optimum quality and file size.

It would be advantageous to provide a system that generates media, whereby the media is automatically uploaded.

It would be advantageous to provide a system that automatically caches generated media so identical requests can be handled without regeneration of images.

It would be advantageous to provide a system that resides behind the Web server, thereby eliminating security issues.

It would be advantageous to provide a system wherein the client browser does not require a plug-in.

It would be advantageous to provide a system wherein the system does not require any changes to a Web server.

It would be advantageous to provide a system wherein the system manages the Web server media cache.

It would be advantageous to provide a system wherein the Web media is generated only if requested by a client browser.

[illegible]

SUMMARY OF THE INVENTION

An automated media delivery system that becomes part of the Web site infrastructure and operates as part of the Web page transaction is provided. The claimed invention streamlines the post-production process by automating the production of a media through proprietary HTML tags embedded in Web documents. The author simply places the original media in the system and adds proprietary HTML tags to HTML or other browser language. The system automatically processes the proprietary HTML tags and produces the media for the Web client. It also replaces the proprietary HTML tags with standard HTML tags so to be processed correctly by the HTML client.

This invention takes as input the client connection, server traffic, and proprietary HTML tags in order to generate the optimized media for the client. The need for the Web author to create different versions of a Web site is reduced because the need is automatically handled by the claimed invention. The generated media is cached so that further requests for the same media require little overhead.

Because the invention takes the original media and proprietary HTML tags as inputs for generating the Web media, it is possible to modify one or both and have the system automatically update the media on all of the associated Web pages.

10

DETAILED DESCRIPTION OF THE INVENTION

An automated graphics delivery system that becomes part of the Web site infrastructure and operates as part of the Web page transaction is provided. The claimed invention streamlines the post-production process by automating the production of a media through proprietary HTML tags embedded in Web documents. The author simply places the original media in the system and adds proprietary HTML tags to HTML documents. The system automatically processes the proprietary HTML tags and produces the media for the Web client. It also replaces the proprietary HTML tags with standard HTML tags so it can be processed correctly by the HTML client.

This invention takes as input the client connection, server traffic, and proprietary HTML tags in order to generate the optimized media for the client. The need for the Web author to create different versions of a Web site is reduced because the need is automatically handled by the claimed invention. The generated media is cached so that further requests for the same media require little overhead.

Fig. 1 is a schematic diagram showing the placement of the system within a current Web infrastructure according to a preferred embodiment of the invention. The system 100 is attached to a Web server 110, which is connected to multiple client browsers 120(a-d) via the Internet 130.

Fig. 2 is a schematic diagram showing how a typical Web site delivers an HTML document and its graphics to a Web browser according to the prior art. An original media 200 is passed to post-production systems 210, wherein the media 200 is manipulated by hand and prepared for the Web. The result is a Web media 220. The Web media 220 and an associated HTML document 230 referring to the media 220 by media tags are input to a Web server 110 for a Web browser 120 to view via the Internet 130.

Fig. 3 is a schematic diagram showing delivery of an HTML document and media to a Web browser according to a preferred embodiment of the invention. An original media 200 and an HTML document embedded with proprietary media tags 300 are input into the system 100. The system 100 generates a Web-safe media 220 and a modified HTML document

Attorney Docket No. EQUI000

230 that refers to the Web media, and automatically loads them onto the Web server 110 for view by a Web browser 120 via the Internet 160.

Fig. 4 is a schematic diagram showing components involved in Web site administration according to the prior art. Original media assets 400 are original images, video, or sound that have not been prepared for the Web. Web sites usually need to manage the placement of media on the network for easy retrieval by Web designers. Post-production systems 410 vary from Web site to Web site. Post-production systems 410 are usually custom procedures that Web designers use to convert an original media, such as an image, to one that can be displayed on the Web. Post-production systems 410 also upload finished images to Web image systems. Web images 420 are Web versions of the original images. Web images 420 are ready for retrieval by the Web server 110 to be delivered to a Web browser 120. Any image to be modified or updated must pass through the herein above three components before it can be delivered to the Web browser 120. HTML pages 460 have references to Web images 420.

Fig. 5 is a schematic diagram showing the components involved in Web site administration according to a preferred embodiment of the invention. Web site administration is simplified using the claimed invention. Asset management, automatic image manipulation, automatic image conversion, automatic image upload, and automatic disk management 500 are provided by the claimed invention.

Fig. 6 is a simple overview showing the components of the system according to a preferred embodiment of the invention. HTML with proprietary tags 300 is the original HTML document that is embedded with proprietary tags which describe how the images are to be manipulated for the Web. Java servlet engine 600 is a third-party product that allows the system 100 to interface with the Web server 110 and execute Java servlet code. The Web server 110 is third-party software that delivers Web pages to a Browser 120. The Browser 120 views Web pages that are sent from the Web server 110. Modified HTML with system created images 230 are a final result of the system. Modified HTML 230 is a standard HTML document without proprietary embedded tags and with standard Web graphics.

The System.

A preferred embodiment of the system 100 is provided.

Attorney Docket No. EQUI0001

HTML parsing subsystem 610 parses through an HTML document and searches for proprietary tags. If it finds a proprietary tag it hands it to a media caching subsystem 620 for further processing. The media caching subsystem 620 returns a standard HTML tag. The HTML parsing subsystem 610 then replaces the proprietary tag it found with the returned tag. The parsing subsystem 610 then continues searching for a next proprietary tag, repeating the process herein above. The process is finished when no more proprietary tags can be found.

The media caching subsystem 620 determines if an image has been created for the requested proprietary tag. If the image has already been created and the files that built that image have not been modified, the media caching subsystem 620 returns an HTML tag that refers to a previously-generated image. If the image has not been created, the media caching subsystem 620 hands the HTML tag to a media creation subsystem 630. The media creation subsystem 630 returns an image to the media caching subsystem 620. The media caching subsystem 620 adds the created image and the HTML tag to a media cache database 640.

The media cache database 640 contains references to the created images 645. In a preferred embodiment, the references are the script used to create the image, the names of the images used to create the image, the dates of those files, and the HTML that represents the created image. The media caching subsystem 620 performs lookups in this database to determine if the image has been created. If the image has not been created the media caching subsystem 620 calls upon the media creation subsystem 630 to create the image and then store the results in the media cache database 640.

The media creation subsystem 630 takes a proprietary tag from the media caching subsystem 620 and generates an image. The image is generated by deciphering the tag and handing it to the media processing engine 650. After the image is created, the media creation subsystem returns the name of the newly created image to the media caching subsystem 620.

The media processing engine 650 interprets the proprietary tag and generates the image. The media processing engine 650 looks up images in a media repository to obtain the location of the original file.

The media repository 660 contains original images 665 used in the system 100.

Fig. 7 is a schematic diagram showing the process flow of a proprietary enabled page delivered to a Web browser according to a preferred embodiment of the invention. An original media 200 is created. The media 200 is placed into the system 100 in the media repository 660. Similarly, an HTML document with proprietary tags 300 is created and placed on a Web server 110. A user requests a Web page from a Web browser 120. The Web server 110 passes the requested page to an HTML parser 610. The HTML parser 610 parses HTML looking for media tags. The parser 610 looks up media tags in a media tags database 640. If the media tag is found, then the system 100 produces a modified HTML document 230. Otherwise, the media creation subsystem 630 uses the media tag to generate a Web media 220. The generated Web media 220 is placed in a media cache subsystem 620. The proprietary media tag is converted by a converter 700 to a standard HTML tag that refers to the generated media 220 in cache. The media tag and the HTML equivalent are stored in the media tags database 640. Media tags are replaced by standard HTML equivalent to provide a modified HTML document 230. The modified HTML document 230 is delivered to the Web server 110. The Web server 100 delivers the modified HTML document 230 to the browser 120 via the Internet for a user to view.

Fig. 8 is a flow chart showing an authoring process according to a preferred embodiment of the invention. The process starts (800) when a user adds an original graphic to the system (810). The user then creates an HTML document that contains proprietary media tags (820). The user then places the HTML document on a Web server (830) and ends the authoring process (840).

Fig. 9 is a flow chart showing an HTML parsing process according to a preferred embodiment of the invention. The process starts (900) when a consumer requests a Web page (910). A Web server hands the request of the Web page to the system (920). The system parses the Web page (930). The system looks for a media tag (940). If found, the system retrieves the HTML equivalent of the media tag (950) and replaces the media tag with the HTML equivalent tag (960). The system continues parsing the Web page for tags (970) by returning to step (940). When no more tags are found, the system delivers the modified Web page to the Web server (980) and therein ends the process (990).

[illegible]

The differences between using HTML and the proprietary tags disclosed herein are noted. HTML allows Web designers to create Web page layouts. HTML offers some control of the images. HTML allows the Web designer to set the height and width of an image. However, all of the other image operations disclosed herein are supported by the claimed invention and are not supported by HTML.

Table A

Generate image

Generate a standard Web image.

<freerideimagethumbnail> mediascript <xs=size ys=size /freerideimagethumbnail>

Generate zoom and pan image

Attorney Docket No. EQUI0001

<freerideimagezoom> mediascript </freerideimagezoom>
Generate a zoomable/panable image.

Security
<freerideimagesecure> </freerideimagesecure>
Specifies that all images found between these tags are secured images and the system will determine access before generating.

Table B herein below provides the claimed script commands according to a preferred embodiment of the invention. Additional commands may be added as needed.

Table B

Media processing script commands

Add Noise
Noise_AddNoise([amount=<value 1..999>] [gaussian] [grayscale])
This command adds noise to the image.

Adjust HSB
AdjustHsb([hue @ <value ±255>] [saturation @ <value ±255>] [brightness @ <value ±255>])
This command allows the HSB of an image to be altered. This can be applied to images of all supported bit-depths.

Adjust RGB
AdjustRgb([brightness @ <value ±255>] [contrast @ <value ±255>] [red @ <value ±255>]
[green @ <value ±255>] [blue @ <value ±255>] [noclip @ <true, false>] [invert @ <true, false>])
This command allows the contrast, brightness, and color balance of an image to be altered.

Blur
Blur(radius @ <value 0..30>)
This command applies a simple blur filter on the image.

Blur Convolve
Blur_Blur().
This command commands perform a simple 3x3 convolution for blurring.

Blur Convolve More
Blur_MoreBlur()
This command commands perform a stronger 3x3 convolution for blurring.

Blur Gaussian

Blur_GaussianBlur([radius=<value 0.1..250>])

This command applies a Gaussian blur to the image.

Blur Motion

Blur_MotionBlur([distance=<value 1..250>] [angle=<degrees>])

This command applies motion blurring to the image using the specified distance and angle.

Brush Composite

Composite(source @ {<User-Defined Media Object name>} [x @ <pixel>] [y @ <pixel>]
[onto] [opacity @ <value 0..255>] [color @ <color in hexadecimal>] [colorize @ <true, false>]
[saturation @ <value 0..255>])

This command composites the specified "brush" (foreground) image onto the current "target" (background) image.

Colorize

Colorize(color @ <color in hexadecimal> [saturation @ <value 0..255>])

This command changes the hue of the pixels in the image to the specified color.

Convert

Convert(rtype @ <bit-depth> [dither @ <value 0..10>])

This command converts the image to the specified type/bit-depth.

Convolve

Convolve(Filter @ <filtername>)

This command applies a basic convolution filter to the image. In a user interface driven system, the filters could be stored in files and edited/created by the user.

Crop/Resize Canvas

Crop([xs @ {<pixels>, <percentage + ">">}] [ys @ {<pixels>, <percentage + ">">}] [xo @ <left pixel>]
[yo @ <top pixel>] [padcolor @ <color in hexadecimal>] [padindex @ <value 0..255>])

This command crops the media to a specified size.

Discard

Discard()

This command removes the designated Media Object from memory.

Drop Shadow

DropShadow([dx @ <pixels>] [dy @ <pixels>] [color @ <color in hexadecimal>] [opacity @ <value 0..255>] [blur @ <value 0..30>] [enlarge @ <true, false>])

This command adds a drop shadow to the image based on its alpha channel.

Equal

Equal(source @ {<User-Defined Media Object name>})

This command compares the current media with the one specified. If the media are different in any way, an error value is returned.

Equalize

Equalize([brightness @ <-1, 0..20>] [saturation @ <-1, 0..20>])

This command equalizes the relevant components of the media. Equalization takes the used range of a component and expands it to fill the available range.

Export Channel

ExportGun(Channel @ <channelname>)

This command exports a single channel of the source as a grayscale image.

Find Edges

Stylize_FindEdges([threshold=<value 0..255>] [grayscale] [mono] [invert])

This command finds the edges of the image based on the specified threshold value.

Fix Alpha

FixAlpha()

This command adjusts the RGB components of an image relative to its alpha channel.

Flip

Flip(<horizontal, vertical> @ <true, false>)

This command flips the media vertically or horizontally.

Frame Add

FrameAdd(Source @ <filename>)

This command adds the given frame(s) to the specified Media Object.

Glow/Halo

Glow(Size @ <value 0..30> [halo @ <value 0..size>] [color @ <color in hexadecimal>] [opacity @ <value 0..255>] [blur @ <value 0..30>] [enlarge @ <true, false>])

This command produces a glow or halo around the image based on the image's alpha.

High Pass

Other_HighPass([radius=<value 0.1..250>])

This command replaces each pixel with the difference between the original pixel and a Gaussian blurred version of the image.

Import Channel

ImportGun(channel @ <channel name> source @ {<User-Defined Media Object name>} [rtype @ <bit-depth>])

This command imports the specified source image (treated as a grayscale) and replaces the selected channel in the original.

Load

Load(Name @ <filename> [type @ <typename>] [transform @ <true, false>])

This command loads a media from the specified file.

Maximum

Other_Maximum([radius=<value 1..10>])

This command scans the area specified by the radius surrounding each pixel, and then replaces the pixel with the brightest pixel found.

Minimum

Other_Minimum([radius=<value 1..10>])

This command scans the area specified by the radius surrounding each pixel, and then replaces the pixel with the darkest pixel found.

Normalize

Normalize([clip @ <value 0..20>])

This command expands the volume of the sample to the maximum possible.

Pixellate Mosaic

Pixellate_Mosaic([size=<value 2..64>])

This command converts the image to squares of the specified size, where each square contains the average color for that part of the image.

Pixellate Fragment

Pixellate_Fragment([radius=<value 1..16>])

This command produces four copies of the image displaced in each direction (up, down, left, right) by the specified radius distance and then averages them together.

Quad Warp

QuadWarp([tlx=<position>] [tly=<position>] [trx=<position>] [try=<position>] [blx=<position>] [bly=<position>] [brx=<position>] [bry=<position>] [smooth])

This command takes the corners of the source image and moves them to the specified locations, producing a warped effect on the image.

Reduce to Palette

Reduce([colors @ <num colors>] [netscape @ <true, false>] [b&w @ <true, false>] [dither @ <value 0..10>] [dithertop @ <value 0..10>] [notbackcolor] [pad @ <true, false>])

This command applies a specified or generated palette to the image.

Rotate

Rotate(Angle @ <value 0..359> [smooth @ <true, false>] [enlarge @ <true, false>] [xs @ <pixels>] [ys @ <pixels>])

This command rotates the media by the specified angle in degrees.

Rotate 3D

Rotate3d([anglex @ <angle ±89>] [angley @ <angle ±89>] [distance @ <value>])

This command rotates the image in 3D about either the x-axis or y-axis.

Save

Save([type @ <image-type>])

This command saves a media to the specified file.

Scale

Scale([xs @ {<pixels>, <percentage + "%">}] [ys @ {<pixels>, <percentage + "%">}]
[constrain @ <true, false>] [alg @ {"fast", "smooth", "outline"}] [x1 @ <pixels>] [y1 @ <pixels>]
[x2 @ <pixels>] [y2 @ <pixels>])

This command scales the image to the specified size.

Select

Selection([source @ <User-Defined media Object>] [remove @ <true, false>] [invert @ <true, false>]
[backcolor] [color=<color>] [index=<value>] [opacity @ <value 0..255>])

This command manages the selected region for the current Media Object.

Set Color

SetColor([backcolor @ <color in hexadecimal>] [forecolor @ <color in hexadecimal>]
[backindex @ <value 0..255>] [foreindex @ <value 0..255>] [transparency @ ("on", "off")])

This command allows the background color, foreground color, and transparency state of an image to be set.

Set Resolution

SetResolution([dpi @ <value>] [xdpi @ <value>] [ydpi @ <value>])

This command changes the DPI of the image in memory.

Sharpen

Sharpen_Sharpen()

This command sharpens the image by enhancing the high-frequency component of the image.

Sharpen More

Sharpen_SharpenMore()

This command sharpens the image by enhancing the high-frequency component of the image, but is stronger than the standard sharpening.

Stylize Diffuse

Stylize_Diffuse([radius=<value 0..>] [lighten] [darken])

This command diffuses the image by randomizing the pixels within a given pixel radius.

Stylize Emboss

Stylize_Emboss([height=<value 1..10>] [angle=<degrees>] [amount=<percentage 1..500>])

This command converts the image to an embossed version.

Attorney Docket No. EQUI000;

Text Drawing

DrawText(Text @ <string> Font @ [size @ <value>]
[color @ <color in hexadecimal>] [smooth @ <true, false>] [<left, right, top, bottom> @ <true, false>]
[x @ <pixel>] [y @ <pixel>] [wrap @ <pixel-width>] [justify @ {left,center,right}] [angle @ <angle>])

This command composites the specified text string onto the image.

Text Making

MakeText(text @ <string> font @ [path @ <path to font directory>] [size @ <value
1..4095>]
[color @ <color in hexadecimal>] [smooth @ <true, false>] [wrap @ <pixel-width>]
[justify @ {left,center,right}] [angle @ <angle>])

This command creates a new image that includes only the specified text.

Trace Contour

Stylize_TraceContour([level=<value 0..255>] [upper] [invert])

This command traces the contour of the image at the specified level (for each gun).

Unsharpen Mask

Sharpen_UnsharpMask([amount=<percentage 1..500>] [radius=<value 0.1..250>]
[threshold=<value 0..255>])

This command enhances the edges and detail of an image by exaggerating differences between the image and a gaussian blurred version of the same image.

Zoom

Zoom([xs @ <pixels>] [ys @ <pixels>] [scale @ <value>] [x @ <left pixel>] [y @ <top pixel>])

This command zooms in on a specified portion of the media and fits it to the specified size.
This constitutes a crop followed by a scale.

Table C herein below provides a list of features provided by a preferred embodiment of the invention. It is noted that the list of features included in Table C is by no means complete. In other embodiments, the list of features is expanded or reduced as needed.

Table C

System Feature List

- **Reads and writes various file formats**
 - BMP, GIF, JPG, PNG, TIF, PICT, TGA, PSD, FPX
- **Supports many image processing operations**
- **Dynamically creates Web images from original assets**
- **Dynamically creates thumbnail images**
- **Dynamically creates images that can be panned and zoomed without browser plug-ins or special file formats**
- **Automatically propagates changes of original assets throughout a Web site**
- **Uses an intelligent caching mechanism**
 - Clean up image cache on demand
 - Eliminates orphaned image files
 - Optimizes Web server cache by providing most recent images
- **Renders TrueType fonts on the server instead of browser**
- **Uses intelligent scaling of line drawings**
- **Allows Web designers to manipulate images with proprietary tags**
- **Preserves original image assets**
- **Optimizes Web server traffic by adjusting the bandwidth of graphics**
- **Optimizes images for client connection speed**
- **Allows clients to specify the quality of images on a Web site**
- **Allows Web designers to dynamically create images by manipulating proprietary tags in their applications (server or client side)**

Fig. 11 is a screen shot showing an administration tool according to a preferred embodiment of the invention. Specifically, Fig. 11 shows an administration page that contains cached images of generated scripts. The use of the term "freeride" refers to an internal code name for the invention.

Attorney Docket No. EQUI0001

Fig. 12 displays a structure of a database record used for the system according to a preferred embodiment of the invention. A Script Table 1200 has 5 columns, Media Script 1210, HTML Equivalent 1220, Bandwidth 1230, Generated File 1240, and Dependency List 1250. A Dependency Table 1260 has two columns, File Name 1270 and Modification Date 1280.

Snowboard Store Example.

Background.

The snowboard store highlights several features of the claimed system. The snowboard store is an imaginary store that allows a user to configure his or her snowboard. The store consists of five logos, five board colors, and four boards. The consumer clicks on the buttons to change the snowboard represented in the middle of the screen. When the consumer has configured the snowboard they the snowboard can be purchased by selecting a buy button.

Prior Art Method.

To create the snowboard site today, the Web designer must render all possible combinations of the board. The number of combinations is five logos x five board colors x four boards = 100. The designer also must render all the buttons. The creation process is very tedious and involves a lot of production work. Typically, most Web sites do not even attempt such an endeavor. Also, other issues must be addressed, such as, for example, updating the Web site and scripting. For example, updating a single logo involves updating a minimum of 20 images.

The prior art method sustains a graphic intensive site that requires management of at least 100 images. Updates to the Web site are time-consuming and prone to human error.

The Claimed Method.

A preferred embodiment of the method scripts the image creation process in HTML to create a dynamic Web site. There is no need to create over 100 images. The claimed system generates images on demand. The Web site only needs to create original assets. The scripting process involves writing the proprietary scripts. In the current example herein, scripting buttons is very simple. Once one button is created, simply copy and paste the HTML to create another button or many buttons. Only the name of the image to be overlaid on the button must be changed. The Webmaster then creates a simple program

Attorney Docket No. EQUI000

that reads what object a user has clicked on and generates a proprietary tag. The tag is then sent to the claimed system to generate a center image.

The claimed method allows the creation of all 100 combinations automatically. When the Web site receives an updated image, only the original image needs to be updated. Any change to the original image automatically propagates throughout the system. The Web site is easier to manage. Testing of the Web site is easier because there is no need to test all 100 combinations. A small subset of combinations will guarantee adequate coverage.

Processing of an Image Tag Example (Fig. 13-16).

Fig. 13 shows two original images 1300 and 1310 to be processed according to a preferred embodiment of the invention.

Fig. 14 shows a portion on an HTML document with a proprietary tag 1400, `<freerideimage></freerideimage>` according to a preferred embodiment of the invention. The use of the term "freeride" refers to an internal code name for the invention.

Fig. 15 shows an HTML document 1500 as viewed in a browser and an HTML document source 1510, according to a preferred embodiment of the invention. The use of the term "freeride" refers to an internal code name for the invention.

Fig. 16 shows a generated GIF image 1600 according to a preferred embodiment of the invention.

Accordingly, although the invention has been described in detail with reference to a particular preferred embodiment, persons possessing ordinary skill in the art to which this invention pertains will appreciate that various modifications and enhancements may be made without departing from the spirit and scope of the claims that follow.

CLAIMS

1. A process for delivering HTML or browser language, including ASP, JSP, and CGI, and associated Web media to a Web server, comprising the steps of:
said system taking as input an original media and HTML or browser language having proprietary media tags relating to said original media;
said system generating a specified Web media from said original media and placing it on Web server; and
said system generating HTML or browser language that refers to said Web media and placing it on Web server.
2. The process of Claim 1, wherein generating said Web media and said HTML or browser language for said Web server further comprises the step of:
reading and writing various file formats.
3. The process of Claim 1, wherein generating said Web media and said HTML or browser language for said Web server further comprises the step of:
supporting a plurality of media operations.
4. The process of Claim 1, wherein generating said Web media and said HTML or browser language for said Web server further comprises the step of:
dynamically creating said Web media from said original media.
5. The process of Claim 1, wherein generating said Web media and said HTML or browser language for said Web server further comprises the step of:
dynamically creating thumbnail images.
6. The process of Claim 1, wherein generating Web media and said HTML or browser language for said Web server further comprises the step of:
dynamically creating images that can be panned and zoomed without browser plug-ins or special file formats.
7. The process of Claim 1, wherein generating said Web media and said HTML or browser language for said Web server further comprises the step of:
automatically propagating changes of original media assets throughout a Web site.

8. The process of Claim 1, wherein generating said Web media and said HTML or browser language for said Web server further comprises the step of:
providing an intelligent caching mechanism.
9. The process of Claim 1, wherein generating said Web media and said HTML or browser language for said Web server further comprises the step of:
rendering TrueType fonts on said Web server instead of on a browser.
10. The process of Claim 1, wherein generating said Web media and said HTML or browser language for said Web server further comprises the step of:
providing intelligent scaling of line drawings.
11. The process of Claim 1, wherein generating said Web media and said HTML or browser language for said Web server further comprises the step of:
allowing a Web designer to manipulate images with a plurality of proprietary tags.
12. The process of Claim 1, wherein generating said Web media and said HTML or browser language for said Web server further comprises the step of:
preserving original image assets.
13. The process of Claim 1, wherein generating said Web media and said HTML or browser language for said Web server further comprises the step of:
optimizing Web server traffic by adjusting bandwidth of graphics.
14. The process of Claim 1, wherein generating said Web media and said HTML or browser language for said Web server further comprises the step of:
optimizing images for client connection speed.
15. The process of Claim 1, wherein generating said Web media and said HTML or browser language for said Web server further comprises the step of:
allowing clients to specify quality of images on a Web site.
16. The process of Claim 1, wherein generating said Web media and said HTML or browser language for said Web server further comprises the step of:

allowing a Web designer to dynamically create images by manipulating proprietary tags in server-side applications and client-side applications.

17. A system for delivering HTML or browser language, including ASP, JSP, and CGI, and associated Web media to a Web server, comprising:

means for accepting as input an original media and a first HTML document having proprietary media tags;

means for generating said Web media and said HTML or browser language to said Web server; and

wherein said generated HTML or browser language refers to said generated Web media.

18. The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

means for reading and writing various media file formats.

19. The process of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

means for supporting a plurality of media operations.

20. The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

means for dynamically creating said Web media from said original media.

21. The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

means for dynamically creating thumbnail images.

22. The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

means for dynamically creating images that can be panned and zoomed without browser plug-ins or special file formats.

23. The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

means for automatically propagating changes of original assets throughout a Web site.

24. The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

means for providing an intelligent caching mechanism.

25. The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

means for rendering TrueType fonts on said Web server instead of by a browser.

26. The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

means for providing intelligent scaling of line drawings.

27. The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

means for allowing a Web designer to manipulate images with a plurality of proprietary tags.

28. The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

means for preserving original image assets.

29. The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

means for optimizing Web server traffic by adjusting bandwidth of graphics.

30. The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

means for optimizing images for client connection speed.

31. The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

means for allowing clients to specify quality of images on a Web site.

32. The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

means for allowing a Web designer to dynamically create images by manipulating proprietary tags in server-side applications and client-side applications.

33. A process for administrating and maintaining on a network a plurality of original computer implemented assets, each asset coupled to an HTML page, for delivery to a Web browser, comprising the steps of:

providing automatic management of said original assets;

providing automatic manipulation of said original assets;

providing automatic conversion of said original assets;

providing automatic upload of said converted assets through said network to said Web browser; and

providing automatic disk management for said converted images.

34. A system for administrating and maintaining on a network a plurality of original computer implemented assets, each asset coupled to an HTML page, for delivery to a Web browser, comprising:

means for providing automatic management of said original assets;

means for providing automatic manipulation of said original assets;

means for providing automatic conversion of said original assets;

means for providing automatic upload of said converted assets through said network to said Web browser; and

means for providing automatic disk management for said converted images.

35. A process for delivering an original media, comprising the steps of:

placing said original media in a network system;

creating an HTML document or browser language having proprietary media tags and placing said HTML document or browser language onto a Web server;

actuating a user request from a customer browser for a Web page by having said Web server pass said requested Web page to an HTML parser on said network system;

parsing said HTML document or browser language on said parser by looking for said proprietary media tags;

looking up said proprietary media tags in a media tags database on said network system;

if at least one media tag of said proprietary media tags is not found,

generating a Web media by using said at least one media tag; placing said generated Web media in a media cache on said network system;
converting said at least one media tag to at least one standard HTML equivalent tag that refers to said media in said cache; and
storing said at least one media tag and said at least one standard HTML equivalent tag in said database;
modifying said HTML document or browser language by replacing said at least one media tag by said at least one standard HTML equivalent tag;
delivering said modified HTML document or browser language from said network system to said Web server; and
delivering said modified HTML document or browser language from said Web server to said customer browser for said customer to view.

36. A network system for delivering an original media, comprising:
- means for placing said original media in said network system;
 - means for creating HTML or browser language having proprietary media tags and placing said HTML or browser language onto a Web server;
 - means for actuating a request from a customer browser for a Web page by having said Web server pass said requested Web page to an HTML parser on said network system;
 - means for parsing said HTML document on said parser by looking for said proprietary media tags;
 - means for looking up said proprietary media tags in a media tags database on said network system;
 - if at least one media tag of said proprietary media tags is not found,
 - means for generating a Web media by using said at least one media tag; placing said generated Web media in a media cache on said network system;
 - means for converting said at least one media tag to at least one standard HTML equivalent tag that refers to said media in said cache; and
 - means for storing said at least one media tag and said at least one standard HTML equivalent tag in said database;
 - means for generating HTML or browser language by replacing said at least one media tag by said at least one standard HTML equivalent tag;
 - means for delivering said generated HTML or browser language from said network system to said Web server; and

means for delivering said modified generated HTML or browser language from said Web server to said customer browser for said customer to view.

37. An media delivery system using a Java servlet engine, a Web server, and a customer browser for generating HTML or browser language, said generated HTML or browser language having a proprietary image, from an original HTML document or browser language embedded with a proprietary tag, comprising:

an HTML parser subsystem adapted to search for a proprietary tag in said original HTML or browser language and to replace said proprietary tag with a standard HTML tag;

a media caching subsystem adapted to determine a status of existing or needs to be created of said proprietary image for said proprietary tag, and to send said standard HTML tag to said media creation subsystem;

a media cache database adapted to store data associated with said proprietary image;

a media creation subsystem adapted to decipher said proprietary tag;

a media processing engine adapted to receive from said media creation subsystem said deciphered proprietary tag and to interpret said tag to generate said proprietary media; and

a media repository adapted to store at least one original media associated with said proprietary media.

38. The system of Claim 37, wherein said original HTML or browser language is embedded with a plurality of proprietary tags, said proprietary tags associated with a plurality of proprietary media and associated with a plurality of original media.

39. The system of Claim 37 wherein said stored data associated with said proprietary media further comprises:

a script used to create said proprietary media, said script having an associated date ;

a name of said at least one original media used to create said proprietary media, said name having an associated date; and

said generated HTML or browser language.

40. The system of Claim 37, wherein said HTML parser subsystem further comprises:

means for sending said proprietary tag to said media caching subsystem for further processing;

means for receiving from said media caching subsystem said standard HTML tag;

means for searching for a next proprietary tag to replace said next proprietary tag with a next standard HTML tag; and

means for determining that no more proprietary tags exist in said original HTML document or browser language.

41. The system of Claim 37, wherein said media caching subsystem further comprises: means for determining if said proprietary media has been modified.

42. The system of Claim 39, wherein said media caching subsystem further comprises: means for determining if said associated script data and said associated original media date have been modified.

43. The system of Claim 37, wherein said media cache database further comprises: a script table having a media processing script column, an HTML Equivalent column, a Bandwidth column, a Generated File column, and a Dependency List column; and a dependency table having a File Name column and a Modification Date column.

44. An authoring process for a user of a proprietary media delivery system on a Web server, said system having proprietary tags, comprising the steps of:
adding an original media asset to said proprietary media delivery system;
creating an HTML document or browser language containing at least one of said proprietary tags; and
placing said created HTML document or browser language on said Web server.

45. A process for creating a media associated with an HTML equivalent tag and associated with a media tag for a system, comprising the steps of:

receiving a request from said system for said HTML equivalent tag;

combining said media tag with bandwidth information;

determining if a media tag entry associated with said media tag exists in a media tag database;

if said media tag entry exists in said media database,

determining if at least one original asset used to create said has changed;

if said at least one original asset used to create said has not changed,

retrieving said HTML equivalent tag from said database; and

return said HTML equivalent tag to said system;

if said at least one original asset used to create said has changed,

Attorney Docket No. EQUI0001

removing said media tag entry from said database;
create said media using said media tag;
storing said media in a media cache;
generating an HTML document referring to said generated media;
placing said media tag and said HTML equivalent tag in said media
database; and

return said HTML equivalent tag to said system;
if said media tag entry does not exist in said media database,
create said media using said media tag;
storing said media in a media cache;
generating HTML or browser language referring to said generated media;
placing said media tag and said HTML equivalent tag in said media database;

and

return said HTML equivalent tag to said system.

ENCLOSURE

AUTOMATED PROCESSING AND DELIVERY OF MEDIA TO WEB SERVERS

ABSTRACT

5/17/97
A system is provided for the automatic process and delivery of media, such as images, video, and sound to a Web server. A primary feature of the invention is that it eliminates the laborious post-production work that must be done before a media asset can be delivered on a Web server. This system uses as input the original media, an HTML document or browser language having proprietary tags, Web server traffic, and Web-client capabilities. This system uses the input to generate an optimized Web media, generates HTML to refer to the generated media, and automatically deploys the HTML and media to the Web server. The Web authoring process involves the creation of the media, the assignment of a unique name to the media, and the modification of the HTML document or browser language to contain a proprietary tag that contains the media's unique name, the modification to be performed on the media, and the Web page format for the media. Once the authoring is complete, it may be viewed by a client browser. The client browser retrieves the page containing the media in a standard way. A Web server passes the HTML or browser language, including ASP, JSP, and CGI, the client browser capabilities, and current server traffic to the system, which parses the HTML or browser language searching for the proprietary tags. If the proprietary tag is found, the tag is processed to generate a Web media. The system replaces the proprietary tag with standard HTML tags containing the generated media and the Web page delivery to the browser. The proprietary tag is combined with current server load statistics and client browser capabilities to generate a key. The key is looked up in the system's database. If the key is found, the associated HTML tag is received and the proprietary tag is replaced as discussed above. If the key is not found, the system uses the HTML tag along with the client browser to generate an optimized media for the client. An HTML tag is created based on the proprietary tag and contains the generated media. The information is stored in the system database in case identical proprietary tags are processed.

DECLARATION FOR PATENT APPLICATION

As a below named inventor, I hereby declare that:

My residence, post office address, and citizenship are as stated below next to my name;

I believe I am the original, first, and sole inventor (if only one name is listed below) or an original, first, and joint inventor (if plural names are listed below) of the subject matter which is claimed and for which a patent is sought on the invention entitled:

AUTOMATIC PROCESSING AND DELIVERY OF MEDIA TO WEB SERVERS

the specification of which (check one) ☒ is attached hereto, or ☐ was filed on _____ as Application Serial No. _____ and was amended on _____ (if applicable).

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims, as amended by any amendment referred to above.

I acknowledge the duty to disclose information which is material to the examination of this application in accordance with Title 37, Code of Federal Regulations, Section 1.56(a).

I hereby claim foreign priority benefits under Title 35, United States Code, Section 119 of any foreign application(s) for patent or inventor's certificate listed below and have also identified below any foreign application for patent or inventor's certificate having a filing date before that of the application on which priority is claimed:

INFORMATION DISCLOSURE STATEMENT

Assistant Commissioner for Patents
Washington, DC 20231

Sir:

This Information Disclosure Statement is submitted:

- (X) under 37 CFR 1.97(b), or
(within three months of filing national application; or date of entry of international application; or before mailing date of first office action on the merits; whichever occurs last)
- () under 37 CFR 1.97(c) together with either a:
() Certification under 37 CFR 1.97(e), or
() a \$220.00 fee under 37 CFR 1.17(p), or
(After the CFR 1.97(b) time period, but before final action or notice of allowance, whichever occurs first)
- () under 37 CFR 1.97(d) together with a:
() Certification under 37 CFR 1.97(e), and
() a \$220.00 fee under 37 CFR 1.17(d)(2)(ii), and
() a \$130.00 petition fee set forth in 37 CFR 1.17(i)(1)
(Filed after final action or notice of allowance, whichever occurs first, but before payment of the issue fee)
- () The Commissioner is authorized to charge any additional fees or credit any overpayment to Deposit Account No. 07-1445 (Order No. ____). A copy of this sheet is enclosed for accounting purposes.
- (X) Applicant(s) submit herewith Form PTO 1449 -- Information Disclosure Citation together with copies of patents, publications or other information of which applicant(s) are aware, which applicant(s) believe(s) may be material to the examination of this application and for which there may be a duty to disclose in accordance with 37 CFR 1.25.

() A concise explanation of the relevance of foreign language patents, foreign language publications and other foreign language information listed on PTO Form 1449, as presently understood by the individual(s) designated in 37 CFR 156(c) most knowledgeable about the content is given on the attached sheet, or where a foreign language patent is cited in a search report or other action by a foreign patent office in a counterpart foreign application, an English language version of the search report or action which indicates the degree of relevance found by the foreign office is listed on form PTO 1449 and is enclosed herewith.

It is requested that the information disclosed herein be made of record in this application.

Respectfully Submitted,

Michael A. Glenn

PAPER #2

Attorney Docket No. QUI0001

Applicant/Patentee: Christopher Samaniego, Nelson H. "Rocky" Offner, Adrian D. Thewlis and David R. Boyd
Serial or Patent No. _____ Atty Docket No. EQUI0001
Filed or Issued: _____
For: AUTOMATIC PROCESSING AND DELIVERY OF MEDIA TO WEB SERVERS

VERIFIED STATEMENT (DECLARATION) CLAIMING SMALL ENTITY STATUS
37.CFR 1.9(f) and 1.27(c)--SMALL BUSINESS CONCERN

I hereby declare that I am
☐ the owner of the small business concern identified below:
☒ an official empowered to act on behalf of the small business concern identified below:

NAME OF CONCERN: EQUILIBRIUM

ADDRESS: Three Harbor Drive, Suite 111, Sausalito, California 94965

I hereby declare that the above identified small business concern qualifies as a small business concern as defined in 13 CFR 121.3-18, and reproduced in 37 CFR 1.9(d), for purposes of paying reduced fees under 41(a) and (b) of Title 35, U.S. Code, in that the number of employees of the concern, including those of its affiliates, does not exceed 500 persons. For purposes of this statement, (1) the number of employees of the business concern is the average over the previous fiscal year of the concern of the persons employed on a full-time, part-time or temporary basis during each of the pay periods of the fiscal year, and (2) concerns are affiliates of each other when either, directly or indirectly, one concern controls or has the power to control the other, or a third party or parties controls or has the power to control both.

I hereby declare that rights under contract or law have been conveyed to and remain with the small business concern identified above with regard to the invention entitled: AUTOMATIC PROCESSING AND DELIVERY OF MEDIA TO WEB SERVERS, by inventor(s) Christopher Samaniego, Nelson H. "Rocky" Offner, Adrian D. Thewlis and David R. Boyd, described in

☒ the specification filed herewith.
☐ application Serial No. _____ filed _____
☐ patent # _____ issued _____

If the rights held by the above-identified small business concern are not exclusive, each individual, concern or organization having rights to the invention is listed below* and no rights to the invention are held by any person, other than the inventor, who could not qualify as a small business concern under 37 CFR 1.9(d) or by any concern which would not qualify as a small business concern under 37 CFR 1.9(d) or a nonprofit organization under 37 CFR 1.9(e). *Note: separate verified statements are required from each named person, concern or organization having rights to the invention averring to their status as small entities. (37 CFR 1.27)

Name: _____

Address: _____

☐ individual ☐ small business concern ☐ nonprofit organization

Attorney Docket No. QUL0001

I acknowledge the duty to file, in this application or patent, notification of any change in status resulting in loss of entitlement to small entity status prior to paying, or at the time of paying, the earliest of the issue fee or any maintenance fee due after the date on which status as a small entity is no longer appropriate. (37 CFR 1.28(b)).

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further, that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under 1001 of Title 18 of the U.S. Code, and that such willful false statements may jeopardize the validity of the application, any patent issuing thereon, or any patent to which this verified statement is directed.

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 9/5/2000 (change of address).
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-45 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☐ Claim(s) _____ is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☒ Claim(s) 1-45 are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-32, 35-45, drawn to creation/application of a structured document (i.e. HTML, etc.) , classified in class 715, subclass 513.
 - II. Claims 33, 34, drawn to administration and maintenance on a network the management and manipulation of assets (data) delivered to a browser (remote data accessing), classified in class 709, subclass 218 .
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case invention I deals substantially with creation and application of an HTML (structured) document. Invention II deals substantially with administration and maintenance on a network, a plurality of assets (data) for delivery/display on a browser.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Application/Control Number: 09/425,326

Page 3

Art Unit: 2176

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to William Bashore whose telephone number is (703) 308-5807. The examiner can normally be reached on Monday through Friday from 11:30 AM to 8:00 PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Heather Herndon, can be reached on (703) 308-5186.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 305-3900.

Application/Control Number: 09/425,326

Page 4

Art Unit: 2176

7. Any response to this action should be mailed to:

Commissioner of Patents and Trademarks
Washington, D.C. 20231

or faxed to:

(703) 746-7239 (for formal communications intended for entry)

or:

(703) 746-7240 (for informal or draft communications, please label
"PROPOSED" or "DRAFT")

or:

(703) 746-7238 (for after-final communications)

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive,
Arlington, VA, Fourth Floor (Receptionist).

7/18/03

CONCLUSION

Accordingly, Applicant earnestly solicits the Examiner's withdrawal of the rejection raised in the above referenced Office Action.

5

Respectfully Submitted,

10

Michael A. Glenn

Reg. No. 30,176

Customer No. 22862

A

Claims

Please cancel Claims 33 and 34.

- 5 1. (original) A process for delivering HTML or browser language, including ASP, JSP, and CGI, and associated Web media to a Web server, comprising the steps of:
- said system taking as input an original media and HTML or browser language having proprietary media tags relating to said original media;
- said system generating a specified Web media from said original media and
- 10 placing it on Web server; and
- said system generating HTML or browser language that refers to said Web media and placing it on Web server.
2. (original) The process of Claim 1, wherein generating said Web media and said
- 15 HTML or browser language for said Web server further comprises the step of:
- reading and writing various file formats.
3. (original) The process of Claim 1, wherein generating said Web media and said
- HTML or browser language for said Web server further comprises the step of:
- 20 supporting a plurality of media operations.
4. (original) The process of Claim 1, wherein generating said Web media and said
- HTML or browser language for said Web server further comprises the step of:
- dynamically creating said Web media from said original media.

5. (original) The process of Claim 1, wherein generating said Web media and said HTML or browser language for said Web server further comprises the step of:
dynamically creating thumbnail images.

5

6. (original) The process of Claim 1, wherein generating Web media and said HTML or browser language for said Web server further comprises the step of:
dynamically creating images that can be panned and zoomed without browser plug-ins or special file formats.

10

7. (original) The process of Claim 1, wherein generating said Web media and said HTML or browser language for said Web server further comprises the step of:
automatically propagating changes of original media assets throughout a Web site. *Sidava*

15

8. (original) The process of Claim 1, wherein generating said Web media and said HTML or browser language for said Web server further comprises the step of:
providing an intelligent caching mechanism.

20

9. (original) The process of Claim 1, wherein generating said Web media and said HTML or browser language for said Web server further comprises the step of:
rendering TrueType fonts on said Web server instead of on a browser.

10. (original) The process of Claim 1, wherein generating said Web media and said HTML or browser language for said Web server further comprises the step of:
providing intelligent scaling of line drawings.

5 11. (original) The process of Claim 1, wherein generating said Web media and said HTML or browser language for said Web server further comprises the step of:
allowing a Web designer to manipulate images with a plurality of proprietary tags.

12. (original) The process of Claim 1, wherein generating said Web media and said
10 HTML or browser language for said Web server further comprises the step of:
preserving original image assets.

13. (original) The process of Claim 1, wherein generating said Web media and said
HTML or browser language for said Web server further comprises the step of:
15 optimizing Web server traffic by adjusting bandwidth of graphics.

14. (original) The process of Claim 1, wherein generating said Web media and said
HTML or browser language for said Web server further comprises the step of:
optimizing images for client connection speed.

20 15. (original) The process of Claim 1, wherein generating said Web media and said
HTML or browser language for said Web server further comprises the step of:
allowing clients to specify quality of images on a Web site.

16. (original) The process of Claim 1, wherein generating said Web media and said HTML or browser language for said Web server further comprises the step of:

allowing a Web designer to dynamically create images by manipulating proprietary tags in server-side applications and client-side applications.

5

17. (original) A system for delivering HTML or browser language, including ASP, JSP, and CGI, and associated Web media to a Web server, comprising:

means for accepting as input an original media and a first HTML document having proprietary media tags;

10

means for generating said Web media and said HTML or browser language to said Web server; and

wherein said generated HTML or browser language refers to said generated Web media.

15 18. (original) The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

means for reading and writing various media file formats.

19. (original) The process of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

means for supporting a plurality of media operations.

20 20. (original) The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

means for dynamically creating said Web media from said original media.

21. (original) The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

5 means for dynamically creating thumbnail images.

22. (original) The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

10 means for dynamically creating images that can be panned and zoomed without browser plug-ins or special file formats.

23. (original) The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

15 means for automatically propagating changes of original assets throughout a Web site.

24. (original) The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

20 means for providing an intelligent caching mechanism.

25. (original) The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

means for rendering TrueType fonts on said Web server instead of by a browser.

26. (original) The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:
means for providing intelligent scaling of line drawings.

5 27. (original) The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:
means for allowing a Web designer to manipulate images with a plurality of proprietary tags.

10 28. (original) The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:
means for preserving original image assets.

29. (original) The system of Claim 17, wherein means for generating said Web
15 media and said HTML or browser language for said Web server further comprises:
means for optimizing Web server traffic by adjusting bandwidth of graphics.

30. (original) The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:
20 means for optimizing images for client connection speed.

31. (original) The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:
means for allowing clients to specify quality of images on a Web site.

32. (original) The system of Claim 17, wherein means for generating said Web media and said HTML or browser language for said Web server further comprises:

means for allowing a Web designer to dynamically create images by
5 manipulating proprietary tags in server-side applications and client-side applications.

33. (canceled)

34. (canceled)

35. (original) A process for delivering an original media, comprising the steps of:
placing said original media in a network system;

creating an HTML document or browser language having proprietary media tags
and placing said HTML document or browser language onto a Web server;

15 actuating a user request from a customer browser for a Web page by having said Web server pass said requested Web page to an HTML parser on said network system;

parsing said HTML document or browser language on said parser by looking for said proprietary media tags;

20 looking up said proprietary media tags in a media tags database on said network system;

If at least one media tag of said proprietary media tags is not found,

generating a Web media by using said at least one media tag; placing said

generated Web media in a media cache on said network system;

converting said at least one media tag to at least one standard HTML equivalent tag that refers to said media in said cache; and

storing said at least one media tag and said at least one standard HTML equivalent tag in said database;

5 modifying said HTML document or browser language by replacing said at least one media tag by said at least one standard HTML equivalent tag;

delivering said modified HTML document or browser language from said network system to said Web server; and

10 delivering said modified HTML document or browser language from said Web server to said customer browser for said customer to view.

36. (original) A network system for delivering an original media, comprising:

means for placing said original media in said network system;

15 means for creating HTML or browser language having proprietary media tags and placing said HTML or browser language onto a Web server;

means for actuating a request from a customer browser for a Web page by having said Web server pass said requested Web page to an HTML parser on said network system;

20 means for parsing said HTML document on said parser by looking for said proprietary media tags;

means for looking up said proprietary media tags in a media tags database on said network system;

if at least one media tag of said proprietary media tags is not found,

means for generating a Web media by using said at least one media tag;
placing said generated Web media in a media cache on said network system;
means for converting said at least one media tag to at least one standard
HTML equivalent tag that refers to said media in said cache; and

5 means for storing said at least one media tag and said at least one standard
HTML equivalent tag in said database;

means for generating HTML or browser language by replacing said at least one
media tag by said at least one standard HTML equivalent tag;

10 means for delivering said generated HTML or browser language from said
network system to said Web server; and

means for delivering said modified generated HTML or browser language from
said Web server to said customer browser for said customer to view.

37.3 (original) An media delivery system using a Java servlet engine, a Web server,
15 and a customer browser for generating HTML or browser language, said generated
HTML or browser language having a proprietary image, from an original HTML
document or browser language embedded with a proprietary tag, comprising:

20 an HTML parser subsystem adapted to search for a proprietary tag in said
original HTML or browser language and to replace said proprietary tag with a standard
HTML tag;

a media caching subsystem adapted to determine a status of existing or needs to
be created of said proprietary image for said proprietary tag, and to send said standard
HTML tag to said media creation subsystem;

a media cache database adapted to store data associated with said proprietary image;

a media creation subsystem adapted to decipher said proprietary tag;

a media processing engine adapted to receive from said media creation
5 subsystem said deciphered proprietary tag and to interpret said tag to generate said proprietary media; and

a media repository adapted to store at least one original media associated with said proprietary media.

10 38. (original) The system of Claim 37, wherein said original HTML or browser language is embedded with a plurality of proprietary tags, said proprietary tags associated with a plurality of proprietary media and associated with a plurality of original media.

15 39. (original) The system of Claim 37, wherein said stored data associated with said proprietary media further comprises:

a script used to create said proprietary media, said script having an associated date ;

a name of said at least one original media used to create said proprietary media,
20 said name having an associated date; and

said generated HTML or browser language.

1 40. (original) The system of Claim 37, wherein said HTML parser subsystem further
comprises:

means for sending said proprietary tag to said media caching subsystem for further processing;

means for receiving from said media caching subsystem said standard HTML tag;

5 means for searching for a next proprietary tag to replace said next proprietary tag with a next standard HTML tag; and

means for determining that no more proprietary tags exist in said original HTML document or browser language.

10 ~~41~~. (original) The system of Claim ~~37~~³, wherein said media caching subsystem further comprises:

means for determining if said proprietary media has been modified.

15 ~~42~~. (original) The system of Claim ~~39~~⁵, wherein said media caching subsystem further comprises:

means for determining if said associated script data and said associated original media data have been modified.

20 43. (original) The system of Claim ~~37~~⁵, wherein said media cache database further comprises:

a script table having a media processing script column, an HTML Equivalent column, a Bandwidth column, a Generated File column, and a Dependency List column; and

a dependency table having a File Name column and a Modification Date column.

44. (original) An authoring process for a user of a proprietary media delivery system on a Web server, said system having proprietary tags, comprising the steps of:
adding an original media asset to said proprietary media delivery system;
5 creating an HTML document or browser language containing at least one of said proprietary tags; and
placing said created HTML document or browser language on said Web server.

45. (original) A process for creating a media associated with an HTML equivalent tag and associated with a media tag for a system, comprising the steps of:
receiving a request from said system for said HTML equivalent tag;
combining said media tag with bandwidth information;
determining if a media tag entry associated with said media tag exists in a media tag database;
15 if said media tag entry exists in said media database,
determining if at least one original asset used to create said has changed;
if said at least one original asset used to create said has not changed,
retrieving said HTML equivalent tag from said database; and
return said HTML equivalent tag to said system;
20 if said at least one original asset used to create said has changed,
removing said media tag entry from said database;
create said media using said media tag;
storing said media in a media cache;
generating an HTML document referring to said generated media;

placing said media tag and said HTML equivalent tag in said media database; and

return said HTML equivalent tag to said system;

if said media tag entry does not exist in said media database,

5 create said media using said media tag;

storing said media in a media cache;

generating HTML or browser language referring to said generated media;

placing said media tag and said HTML equivalent tag in said media database;

and

10 return said HTML equivalent tag to said system.

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE ____ MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) ☒ Responsive to communication(s) filed on 18 July 2003.

2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.

3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4) ☒ Claim(s) 1-32 and 35-45 is/are pending in the application.

4a) Of the above claim(s) ____ is/are withdrawn from consideration.

5) ☒ Claim(s) 35, 36, 45 is/are allowed.

6) ☒ Claim(s) 1-32, 37-42 and 44 is/are rejected.

7) ☒ Claim(s) 43 is/are objected to.

8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

9) ☒ The specification is objected to by the Examiner.

10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

11) ☐ The proposed drawing correction filed on ____ is: a) ☐ approved b) ☐ disapproved by the Examiner.

If approved, corrected drawings are required in reply to this Office action.

12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a) ☐ All b) ☐ Some * c) ☐ None of:

1. ☐ Certified copies of the priority documents have been received.

2. ☐ Certified copies of the priority documents have been received in Application No. ____.

3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).

a) ☐ The translation of the foreign language provisional application has been received.

15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Page 2

DETAILED ACTION

1. This action is responsive to communications: original application filed 10/21/1999, IDS filed 10/21/1999 (as paper 2), and 11/12/1999 (as paper 3).
2. The examiner acknowledges Applicant's election of Group I (claims 1-32 and 35-45) for examination on the merits.
3. Claims 1-32, 35-45 are pending. Claims 33, 34 have been canceled. Claims 1, 17, 35, 36, 37, 44, 45 are independent claims.

Specification

4. Applicant is reminded of the proper language and format for an abstract of the disclosure. The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

5. The abstract of the disclosure is objected to because said abstract is greater than 150 words. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 112

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

7. **Claim 45 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.**

In regard to independent claim 45, the phrase “...to create said has changed”, and “...to create said has not changed” throughout said claim is vague and indefinite. It is unclear to the examiner what is being referred to. The examiner’s suggestion of changing each instance of said phrase to “...to create said media has changed”, and “...to create said media has not changed”, respectively, will overcome this rejection.

Allowable Subject Matter

8. **Claims 35, and 36 are allowed.**
9. **Claim 45 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action (see above). It is noted that the allowability of claim 45 is based in part on incorporation of the examiner’s suggestion to overcome said 35 U.S.C. 112, second paragraph rejection as set forth above.**
10. **Claim 43 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.**

Claim Rejections - 35 USC § 103

11. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

12. Claims 1-4, 8, 11-12, 16-20, 24, 27-28, 32, 44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davis et al. (hereinafter Davis), U.S. Patent No. 5,937,160 issued August 1999.

In regard to independent claim 1, Davis teaches updating a hypertext document (residing on a server) via an e-mail message (Davis Abstract). Davis teaches a target web page containing special tags (<RPM> tags) identifying where content from said e-mail is to be inserted, said e-mail containing CGI commands (Davis Figure 7, 14A, column 9 lines 26-37, column 10 lines 30-41). Davis also teaches said e-mail incorporating revisions/additions to other data formats, including graphics, audio, video, etc. (i.e. Web media) (Davis column 3 lines 36-42). Compare with claim 1 "A process for delivering HTML or browser language, including ASP, JSP, and CGI, and associated Web media to a Web server, comprising the steps of:".

Davis teaches a hypertext page containing proprietary HTML tags indicating where data (from the incoming e-mail) is to be inserted and/or modified (Davis column 10 lines 30-41, column 14 lines 65-67 to column 15 lines 1-34). Davis does not specifically teach that said proprietary tags are related to an original media, as claimed. However, Davis teaches that an incoming e-mail can include additions to other media formats associated with the hypertext document (i.e. graphics, audio, video media, etc.) (Davis column 3 lines 36-41). Since Davis's proprietary <RPM> tag is replaced by the e-mail's contents (Davis Abstract), and since special tags (i.e. <RPMTD>) can be included within said e-mail and/or HTML document (Davis column 3 lines

49-52, column 15 lines 20-25), the combined teachings provides the claimed equivalent of a proprietary tag related to original (i.e. video) media. It would have been obvious to one of ordinary skill in the art at the time of the invention to interpret Davis in this fashion, providing Davis the benefit of adding multimedia to a web page, for enhancement purposes (compare with claim 1 *"said system taking as input an original media and HTML or browser language having proprietary media tags relating to said original media"*).

Davis teaches generating a web page (on a server) incorporating replacement of proprietary tags with e-mail content, said content comprising CGI commands and other media related data (Davis Abstract, Figure 14A; compare with claim 1 *"said system generating a specified Web media from said original media and placing it on Web server"*, and *"said system generating HTML or browser language that refers to said Web media and placing it on Web server."*).

In regard to dependent claim 2, Davis teaches hypertext revisions can take the form of other data formats associated with a hypertext document (i.e. graphics, audio, video, etc.) (Davis column 3 lines 35-42).

In regard to dependent claim 3, Davis teaches an e-mail submission including CGI commands, said submission replaces various hypertext code, resulting in a final document (Davis Figures 14A, 14D-1). Within said Figure 14D1, the applied CGI creates a "Profile Questionnaire" submission form (below item 95), when activated, therefore supporting a plurality of media operations (i.e. editing of an input form, etc.).

In regard to dependent claim 4, Davis teaches "real time" (dynamic) web page updating utilizing e-mail submissions (Davis column 8 lines 40-46).

In regard to dependent claim 8, Davis teaches a cache used in a computer for holding data related to communication purposes (Davis column 6 lines 55-59). Since typical operating systems generally incorporate specific (i.e. intelligent) algorithms to manage hardware/software caches for temporarily storing frequently used

data, it would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate an intelligent caching mechanism for holding various data, providing the benefit of caching for quicker data access.

In regard to dependent claim 11, Davis teaches a user submitting an e-mail for the purpose of revising a web page, said revising comprising manipulation of various data and proprietary <RPM> tags (Davis Abstract).

In regard to dependent claim 12, Davis teaches hypertext document can be revised with various other formatted data (i.e. graphics, audio, video, etc.). Since said other data is submitted via an e-mail message, the original assets are preserved (Davis column 3 lines 36-41).

In regard to dependent claim 16, Davis teaches utilizing various editors on a computer (i.e. client/server) for creating and sending an e-mail for submission, as well as a target Web page residing on a Web server, or other server (Davis Abstract, column 8 lines 45-50, column 10 lines 7-14).

In regard to claims 17-20, 24, 27-28, 32, claims 17-20, 24, 27-28, 32 reflect the system comprising computer executable (process) methods as claimed in claims 1-4, 8, 11-12, 16, respectively, and are rejected along the same rationale.

In regard to independent claim 44, claim 44 incorporates substantially similar subject matter as claimed in claim 1, and is rejected along the same rationale.

13. Claims 5, 10, 21, 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davis, in view of Qureshi et al. (hereinafter Qureshi), U.S. Patent No. 6,456,305 issued September 2002.

In regard to dependent claims 5, 10, Davis does not specifically teach thumbnail images, or scaling of images. However, Qureshi teaches sizing and positioning HTML objects including thumbnail images and scaling of images utilizing HTML (Qureshi Abstract, Figures 11-13, column 5 lines 1-10). It would have been obvious to one of ordinary skill in the art at the time of the invention to apply Qureshi's thumbnails and scaling as content included in Davis's e-mail message, providing Davis the benefit of adding said contents to a web page to enrich its displayed contents.

In regard to dependent claim 21, 26, claims 21, 26 reflect the system comprising computer executable (process) methods as claimed in claims 5, 10, respectively, and are rejected along the same rationale.

14. Claims 6, 13-14, 22, 29-30, 37-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davis, in view of Halliday et al. (hereinafter Halliday), U.S. Patent No. 5,880,740 issued March 1999.

In regard to dependent claim 6, Davis does not specifically teach panning/zooming without plugins or special formats. However, Halliday teaches manipulation of HTML based composite graphic images utilizing changes in image size (i.e. zooming, panning, etc.) (Halliday column 3 lines 40-46). It would have been obvious to one of ordinary skill in the art at the time of the invention to apply Halliday's zooming feature into Davis's updatable web pages, providing Davis the benefit of zooming/panning to see image more clearly.

In regard to dependent claims 13, 14, Davis does not specifically teach optimizing network traffic by adjusting graphic bandwidth, or of optimizing images for speed. However, Halliday teaches composite images

whereby only the composite image definition data is transmitted to a destination (instead of the images themselves), thus adjusting bandwidth and optimizing transmission (Halliday Abstract, column 8 lines 29-34). It would have been obvious to one of ordinary skill in the art at the time of the invention to apply Halliday to Davis, providing Davis the benefit of reducing bandwidth and optimizing transfer for increasing overall speed.

In regard to dependent claims 22, 29-30, claims 22, 29-30 reflect the system comprising computer executable (process) methods as claimed in claims 6, 13-14, respectively, and are rejected along the same rationale.

In regard to independent claim 37, claim 37 reflects the system comprising computer executable (process) methods as claimed in claim 1, and in further view of the following, is rejected along the same rationale.

Davis teaches an implementation using Java, and a browser (Davis Figure 12A, column 17 lines 29-32; compare with claim 37 "*Java servlet engine*").

Davis does not specifically teach "*a proprietary image*", as claimed. However, Davis teaches e-mail content (i.e. video) associated with a proprietary tag for updating purposes (Davis Abstract, column 3 lines 36-42, 49-51, column 10 lines 30-45, column 14 lines 65-67 to column 15 lines 1-34), which provides the claimed equivalent of a proprietary image (due to its association). It would have been obvious to one of ordinary skill in the art at the time of the invention to interpret Davis in this fashion, providing Davis the benefit of updating specific images intended for transmission.

Davis does not specifically teach parsing of data, as claimed. However, it is known in the art that in order for HTML content to be interpreted, the tags and data must be parsed for identification of each said tag and data, therefore it would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate parsing to search for specific tags within an HTML document, providing the benefit of parsing to efficiently find tags (compare with claim 37 "*an HTML parser subsystem*").

Davis teaches a cache used in a computer for holding data related to communication purposes (Davis column 6 lines 55-59). Since typical operating systems generally incorporate specific (i.e. intelligent) algorithms to manage hardware/software caches for temporarily storing frequently used data, it would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate an intelligent caching mechanism for holding and transferring various data, providing the benefit of caching for quicker data access (compare with claim 37 "*a media caching subsystem*", and "*a media cache*").

Davis teaches its invention bundled with a database (Davis column 17 lines 19-21). Davis does not specifically teach said database used for storing media of its invention. However, Halliday teaches clip-art elements, as well as image sets stored in a database (Halliday Figure 10 item 158, column 1 lines 35-40; compare with claim 37 "*database*", and "*media repository*"). It would have been obvious to one of ordinary skill in the art at the time of the invention to apply Halliday to Davis, providing Davis the benefit of database repository storage for indexed retrieval.

In regard to dependent claim 38, Davis teaches proprietary tags associated with content. Davis does not specifically teach proprietary tags associated with images and original media, as claimed. However, Davis teaches e-mail content (i.e. video image data) associated with a proprietary tag for updating purposes (Davis Abstract, column 3 lines 36-42, 49-51, column 10 lines 30-45, column 14 lines 65-67 to column 15 lines 1-34), which provides the claimed equivalent of propriety tags associated with media and original media. It would have been obvious to one of ordinary skill in the art at the time of the invention to interpret Davis in this fashion, providing Davis the benefit of updating specific images intended for transmission.

In regard to dependent claim 39, Davis teaches an e-mail comprising CGI (script) commands for insertion into a web page, as well as proprietary tag `<RPMTD>`, specifically used for time/date updating, and images known by file names (Davis column 4 lines 9-14, column 15 lines 20-26).

In regard to dependent claim 40, Davis teaches an e-mail submission involving revision of a plurality of sections of a web page, therefore the entire web page is scanned (parsed) accordingly (Davis Figure 13A).

In regard to dependent claims 41, 42, Davis teaches web pages, as well as a Netscape browser (Davis Figure 12B-1, column 2 lines 35-44). Since it is known in the art that Netscape incorporates its own cache for checking web page data modification, it would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate said cache within Davis, providing Davis the benefit of keeping media and scripts up to date.

15. Claims 7, 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davis, in view of Dozier et al. (hereinafter Dozier), U.S. Patent No. 5,870,552 issued February 1999.

In regard to dependent claim 7, Davis does not specifically teach automatically propagating changes of original media throughout a web site. However, Dozier teaches a method of editing/publishing HTML documents over a network whereby a global search function is used to replace common portions of content (i.e. an updated company logo, or URL shared by many or all documents in a (web site) collection (Dozier Abstract, column 8 lines 29-36). It would have been obvious to one of ordinary skill in the art at the time of the invention to apply Dozier to Davis, providing Davis the benefit of updating (via e-mail) site related media for consistency within related pages of a web site.

In regard to dependent claim 23, claim 23 reflects the system comprising computer executable (process) methods as claimed in claim 7, and is rejected along the same rationale.

16. Claims 9, 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davis, in view of Sakaguchi et al. (hereinafter Sakaguchi), A browsing tool of multi-lingual documents for users without multi-lingual fonts, ACM International Conference On Digital Libraries, 1996, pages 63-71.

In regard to dependent claim 9, Davis teaches a web page ultimately displayed on a browser (Davis Figure 14D-1). Since it is known that Netscape (at least Netscape version 1.1 onward) can utilize true type font (TTF) selection for display (i.e. "Courier New"), it would have been obvious to one of ordinary skill in the art at the time of the invention to utilize true type fonts in said display of HTML, for the benefit of visual clarity.

Davis does not specifically teach said TTF on a web server instead of a browser. However, Sakaguchi teaches translation of web pages via proxy servers, using font glyphs (Sakaguchi page 67 sections 3.2 and 3.3). It would have been obvious to one of ordinary skill in the art at the time of the invention to apply Sakaguchi to Davis, providing Davis the benefit of TTF on a server in order to free up resources of a client browser.

In regard to dependent claim 25, claim 25 reflects the system comprising computer executable (process) methods as claimed in claim 9, and is rejected along the same rationale.

17. Claims 15, 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davis, in view of Bhagwat et al. (hereinafter Bhagwat), U.S. Patent No. 6,563,517 issued May 2003.

In regard to dependent claim 15, Davis does not specifically teach clients specifying image quality on a web site. However, Bhagwat teaches a user interface for adjusting quality of images associated with a web page (Bhagwat Figure 11, column 4 lines 60-64, column 11 lines 45-55). It would have been obvious to one of ordinary skill in the art at the time of the invention to apply Bhagwat to Davis, providing Davis the benefit of adjustment for coping with variability of network characteristics during transmission (see Bhagwat column 3 lines 28-30).

In regard to dependent claim 31, claim 31 reflects the system comprising computer executable (process) methods as claimed in claim 15, and is rejected along the same rationale.

18. Prior art made of record and not relied upon is considered pertinent to disclosure.

Motoyama et al.	U.S. Patent No. 6,009,436	issued	12-1999
Orr	U.S. Patent No. 6,591,280	issued	07-2003
Orr et al.	U.S. Patent No. 5,895,476	issued	04-1999

Conclusion

19. Any inquiry concerning this communication or earlier communications from the examiner should be directed to William Bashore whose telephone number is (703) 308-5807. The examiner can normally be reached on Monday through Friday from 11:30 AM to 8:00 PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Feild, can be reached on (703) 305-9792.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 305-3900.

Application/Control Number: 09/425,326

Mike Flynn , David Pendlebury , Chris Jones , Marge Eldridge , Mik Lamming

Mobile Networks and Applications December 2000

Volume 5 Issue 4

Mobile professionals require access to documents and document-related services, such as printing, wherever they may be. They may also wish to give documents to colleagues electronically, as

09/425,326

easily as with paper, face‐,‐face, and with similar security characteristics. The Satchel system provides such capabilities in the form of a mobile browser, implemented on a device that professional people would be likely to carry anyway, such as a pager or mobile phone. Printing may be per ...

4 An efficient and lightweight embedded Web server for Web-based network element management 83%

 Hong-Taek Ju , Mi-Joung Choi , James W. Hong

International Journal of Network Management September 2000

Volume 10 Issue 5

An Embedded Web Server (EWS) is a Web server which runs on an embedded system with limited computing resources to serve embedded Web documents to a Web browser. By embedding a Web server into a network device, it is possible to provide a Web‐based management user interface, which are user‐friendly, inexpensive, cross‐platform, and network‐ready. This article explores the topic of an efficient and lightweight embedded Web server for Web‐based netw ...

5 Web page presenter 82%

 Rumen Kostadinov

The Journal of Computing in Small Colleges May 2002

Volume 17 Issue 6

Currently, PowerPoint presentations have many useful features. The basic features are dividing the presentation into slides, dividing the slides into segments, displaying the slides and the segments sequentially and applying special effects to the slides and/or segments. However, the PowerPoint software has a few significant limitations: • The presentation files are large and in proprietary format. • The presentation could be posted on the Web, but then it loses the special effects ? ...

6 Special section on advanced XML data processing: Preservation of digital data with self-validating, self-instantiating knowledge-based archives 82%

 Bertram Ludäscher , Richard Marciano , Reagan Moore

ACM SIGMOD Record September 2001

Volume 30 Issue 3

Digital archives are dedicated to the long-term preservation of electronic information and have the mandate to enable sustained access despite rapid technology changes. Persistent archives are confronted with heterogeneous data formats, helper applications, and platforms being used over the lifetime of the archive. This is not unlike the interoperability challenges, for which mediators are devised. To prevent technological obsolescence over time and across platforms, a migration approach for per ...

7 Model-driven development of Web applications: the AutoWeb system 82%

 Piero Fraternali , Paolo Paolini

ACM Transactions on Information Systems (TOIS) October 2000

Volume 18 Issue 4

This paper describes a methodology for the development of WWW applications and a tool environment specifically tailored for the methodology. The methodology and the development environment are based upon models and techniques already used in the hypermedia, information systems, and software engineering fields, adapted and blended in an original mix. The foundation of the proposal is the conceptual design of WWW applications, using HDM-lite, a notation for the specification of structure, nav ...

8 Representing internet streaming media metadata using MPEG-7 multimedia description schemes 82%

-  Eric Rehm
Proceedings of the 2000 ACM workshops on Multimedia November 2000

Singingfish.com uses MPEG-7 description schemes to model the metadata characteristics of Internet streaming media. Further it has used MPEG-7 description schemes as the basis for a number of internal experiments, processes, as well as interchange with commercial content partners. This paper describes our selection of description schemes from the MPEG-7 Multimedia Description Schemes (MDS) Working Drafts, their ability (or lack thereof) to represent Internet streaming media metadata, and our e ...

- 9 Interactive mathematics via the Web using MathML 82%

-  Francis J. Wright
ACM SIGSAM Bulletin June 2000
Volume 34 Issue 2

MathML is a mathematical markup language intended for displaying mathematics in web browsers. At present, it can be used to display mathematics generated dynamically in response to interactive queries only if the browsing and generating facilities are chosen carefully. This paper examines the background and possible options, and describes some of the details of the use of MathML to display the output from a web-based demonstration of an ordinary differential equation solver running in REDUCE ...

- 10 Managing the software design documents with XML 82%

Proceedings of the 16th annual international conference on Computer documentation September 1998

- 11 Integrating and customizing heterogeneous e-commerce applications 80%

-  Anat Eyal , Tova Milo
The VLDB Journal — The International Journal on Very Large Data Bases August 2001
Volume 10 Issue 1

A broad spectrum of electronic commerce applications is currently available on the Web, providing services in almost any area one can think of. As the number and variety of such applications grow, more business opportunities emerge for providing new services based on the integration and customization of existing applications. (Web shopping malls and support for comparative shopping are just a couple of examples.) Unfortunately, the diversity of applications in each specific domain and the dispar ...

- 12 Information storage and management in large web-based applications using XML 80%

The Journal of Computing in Small Colleges June 2003
Volume 18 Issue 6

The Extensible Markup Language [XML], was intended to be a meta-language, when it was initially approved as a Web Standard by the World Wide Web Consortium (W3C), in February of 1998. Since then, it has come a very long way in applicability and popularity and is fast becoming the Standard for Data Interchange over the Web. XML has now formed the foundation for a completely new way of communicating across the Internet. The power of XML to be applied universally to a number of areas lies in the fa ...

- 13 Database: Integrating XML into a database systems course 80%

-  Paul J. Wagner , Thomas K. Moore
Proceedings of the 34th SIGCSE technical symposium on Computer science education February

2003

eXtensible Markup Language (XML) is becoming a standard tool for data storage and transmission. Integrating XML into current database systems courses provides students with an understanding of the growing role of XML in data management and manipulation. We have successfully designed and implemented several exercises for a database systems course in the context of a real-world software project that educate students as to how XML relates to current Database Systems course topics.

14 Live documents with contextual, data-driven information components

80%

 Anke Weber , Holger M. Kienle , Hausi A. Müller

Proceedings of the 20th annual international conference on Computer documentation October 2002

We introduce the notion of a live document and we describe our concept of live documents with contextual, data driven information components. The dynamic and interactive features of live documents provide a consistent data source for multimedia presentations targeted to various audiences and multiple platforms. Therefore, they contribute to the solution of key challenges in single sourcing and repurposing. We motivate the use of live documents with sample scenarios from the field of systems docu ...

Volume 45 Issue 9

Web site developers creating 'data-based Web pages' that interact with organizational databases need to know server- and client-side processing.

16 Ubiquitous WWW: Profiles for the situated web

80%

 Lalitha Suryanarayana , Johan Hjelm

Proceedings of the eleventh international conference on World Wide Web May 2002

The World Wide Web is evolving into a medium that will soon make it possible for conceiving and implementing situation-aware services. A situation-aware or situated web application is one that renders the user with an experience (content, interaction and presentation) that is so tailored to his/her current situation. This requires the facts and opinions regarding the context to be communicated to the server by means of a profile, which is then applied against the description of the application o ...

17 Building efficient and effective metasearch engines

80%

 Weiyi Meng , Clement Yu , King-Lup Liu

ACM Computing Surveys (CSUR) March 2002

Volume 34 Issue 1

Frequently a user's information needs are stored in the databases of multiple search engines. It is inconvenient and inefficient for an ordinary user to invoke multiple search engines and identify useful documents from the returned results. To support unified access to multiple search engines, a metasearch engine can be constructed. When a metasearch engine receives a query from a user, it invokes the underlying search engines to retrieve useful information for the user. Metasearch engines have ...

 Gerhard Reitmayr , Dieter Schmalstieg

Proceedings of the ACM symposium on Virtual reality software and technology November 2001

This article describes OpenTracker, an open software architecture that provides a framework for the different tasks involved in tracking input devices and processing multi-modal input data in virtual

environments and augmented reality application. The OpenTracker framework eases the development and maintenance of hardware setups in a more flexible manner than what is typically offered by virtual reality development packages. This goal is achieved by using an object-oriented design based on XML, ...

 Jochen Hartmann , Shihong Huang , Scott Tilley
Proceedings of the 19th annual international conference on Computer documentation October 2001
Software engineers rely on program documentation as an aid in understanding the functional nature, high-level design, and implementation details of complex applications. Without such documentation, engineers are forced to rely solely on source code. This is a time-consuming and error-prone process, especially when one considers the amount of information assimilation and domain mapping that is required to understand the architecture of a large-scale software system. This paper describes an integr ...

NOTICE OF DRAFTSPERSON'S
PATENT DRAWING REVIEW

The drawing(s) filed (insert date) 10/24/99

A. ☐ approved by the Draftsperson under 37 CFR 1.84 or 1.152.

B. ☒ objected to by the Draftsperson under 37 CFR 1.84 or 1.152 for the reasons indicated below. The Examiner will require submission of new, corrected drawings when necessary. Corrected drawing must be submitted according to the instructions on the back of this notice.

1. DRAWINGS. 37 CFR 1.84(a): Acceptable categories of drawings:

Black ink. Color.

Color drawings are not acceptable until petition is granted.

Fig(s) _____

Pencil and non black ink not permitted. Fig(s) _____

2. PHOTOGRAPHS. 37 CFR 1.84 (b)

1 full-tone set is required. Fig(s) _____

Photographs not properly mounted (must use bristol board or photographic double-weight paper). Fig(s) _____

Poor quality (half-tone). Fig(s) _____

3. TYPE OF PAPER. 37 CFR 1.84(e)

Paper not flexible, strong, white, and durable.

Fig(s) _____

Erasures, alterations, overwritings, interlineations,

fold, copy machine marks not accepted. Fig(s) _____

Mylar, vellum paper is not acceptable (too thin).

Fig(s) _____

4. SIZE OF PAPER. 37 CFR 1.84(f): Acceptable sizes:

21.0 cm by 29.7 cm (DIN size A4)

21.6 cm by 27.9 cm (8 1/2 x 11 inches)

All drawing sheets not the same size.

Sheet(s) _____

Drawings sheets not an acceptable size. Fig(s) _____

5. MARGINS. 37 CFR 1.84(g): Acceptable margins:

Top 2.5 cm Left 2.5cm Right 1.5 cm Bottom 1.0 cm

SIZE: A4 Size

Top 2.5 cm Left 2.5 cm Right 1.5 cm Bottom 1.0 cm

SIZE: 8 1/2 x 11

Margins not acceptable. Fig(s) _____

Top (T) _____ Left (L) _____

Right (R) _____ Bottom (B) _____

6. VIEWS. 37 CFR 1.84(h)

REMINDER: Specification may require revision to correspond to drawing changes.

Partial views. 37 CFR 1.84(h)(2)

Brackets needed to show figure as one entity.

Fig(s) _____

Views not labeled separately or properly.

Fig(s) _____

Enlarged view not labeled separately or properly.

Fig(s) _____

7. SECTIONAL VIEWS. 37 CFR 1.84 (h)(3)

Hatching not indicated for sectional portions of an object.

Fig(s) _____

Sectional designation should be noted with Arabic or

Roman numbers. Fig(s) _____

8. ARRANGEMENT OF VIEWS. 37 CFR 1.84(i)

Words do not appear on a horizontal, left-to-right fashion when page is either upright or turned so that the top becomes the right side, except for graphs. Fig(s) _____

9. SCALE. 37 CFR 1.84(k)

Scale not large enough to show mechanism without crowding when drawing is reduced in size to two-thirds in reproduction.

Fig(s) _____

10. CHARACTER OF LINES, NUMBERS, & LETTERS.

37 CFR 1.84(i)

Lines, numbers & letters not uniformly thick and well defined, clean, durable, and black (poor line quality).

Fig(s) 1-16

11. SHADING. 37 CFR 1.84(m)

Solid black areas pale. Fig(s) _____

Solid black shading not permitted. Fig(s) _____

Shade lines, pale, rough and blurred. Fig(s) _____

12. NUMBERS, LETTERS, & REFERENCE CHARACTERS.

37 CFR 1.84(p)

Numbers and reference characters not plain and legible.

Fig(s) _____

Figure legends are poor. Fig(s) _____

Numbers and reference characters not oriented in the same direction as the view. 37 CFR 1.84(p)(1)

Fig(s) _____

English alphabet not used. 37 CFR 1.84(p)(2)

Figs _____

Numbers, letters and reference characters must be at least .32 cm (1/8 inch) in height. 37 CFR 1.84(p)(3)

Fig(s) _____

13. LEAD LINES. 37 CFR 1.84(q)

Lead lines cross each other. Fig(s) _____

Lead lines missing. Fig(s) _____

14. NUMBERING OF SHEETS OF DRAWINGS. 37 CFR 1.84(t)

Sheets not numbered consecutively, and in Arabic numerals beginning with number 1. Sheet(s) _____

15. NUMBERING OF VIEWS. 37 CFR 1.84(u)

Views not numbered consecutively, and in Arabic numerals, beginning with number 1. Fig(s) _____

16. CORRECTIONS. 37 CFR 1.84(w)

Corrections not made from prior PTO-948 dated _____

17. DESIGN DRAWINGS. 37 CFR 1.152

Surface shading shown not appropriate. Fig(s) _____

Solid black shading not used for color contrast.

Fig(s) _____

Commissioner for Patents

Mail Stop Non Fee Amendment

P.O. Box 1450

15 Alexandria, VA 22313-1450

AMENDMENT

Sir:

20

This Amendment is responsive to the Office Action, dated 28 October 2003, for the above-identified patent application. Amended Specification is attached. Amended Claims are attached.

25

REMARKS

1. Applicant thanks the Examiner for the Examiner's comments which have greatly assisted Applicant in responding.

5

It should be appreciated that Applicant has elected to cancel Claims 1-32, 43, and 44 without prejudice (33 and 34 were previously canceled without prejudice) and amend Claims 37 and 45 solely for the purpose of expediting the patent application process in a manner consistent with the PTO's Patent Business Goals, 65 Fed. Reg. 54603 (9/8/00). In making such amendment, Applicant has not and does not in any way narrow the scope of protection to which Applicant considers the invention herein to be entitled. Rather, Applicant reserves Applicant's right to pursue such protection at a later point in time and merely seeks to pursue protection for the subject matter presented in this submission.

15

2. **Specification.** The Examiner objected to the Abstract of the disclosure because it is greater than 150 words and required correction.

Applicant has amended the Abstract to overcome the Examiner's objection.

20 Accordingly, Applicant respectfully requests that the Examiner withdraw the objection.

3. **35 U.S.C. § 112.** The Examiner has rejected Claim 45 under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Applicant has

amended Claim 45 as to address the Examiner's comments. Therefore, Applicant respectfully requests that the Examiner withdraw the rejection under 35 U.S.C. §112, second paragraph.

5 4. **Claim 37, its dependent claims, and Claim 43.** The Examiner objected to Claim 43 as being dependent upon a rejected base claim (Claim 37), but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. It should be appreciated that Claim 43 depends directly from Claim 37, *i.e.* no intervening claims. Applicant has canceled Claim 43
10 without prejudice and has amended Claim 37 to incorporate the limitations of Claim 43. Therefore, amended Claim 37 and its dependent claims are in allowable condition. Accordingly, Applicant respectfully requests that the Examiner withdraw the objection.

5. **35 U.S.C. §103(a).** The Examiner has rejected Claims 1-4, 8, 11-12, 16-20, 24,
15 27-28, 32, and 44 under 35 U.S.C. §103(a) as being unpatentable over Davis *et al* (U.S. Patent number 5,937,160).

The rejection of Claims 1-4, 8, 11-12, 16-20, 24, 27-28, 32, and 44 under 35 U.S.C. §103(a) is deemed moot in view of Applicant's comments hereinabove. Therefore,
20 Applicant respectfully requests that the Examiner withdraw the rejection under 35 U.S.C. §103(a).

6. **35 U.S.C. §103(a).** The Examiner has rejected Claims 5, 10, 21, and 26 under 35 U.S.C. §103(a) as being unpatentable over Davis *et al* (U.S. Patent number 5,937,160), in view of Qureshi *et al* (U.S. Patent number 6,456,305).

5 The rejection of Claims 15, 10, 21, and 26 under 35 U.S.C. §103(a) is deemed moot in view of Applicant's comments hereinabove. Therefore, Applicant respectfully requests that the Examiner withdraw the rejection under 35 U.S.C. §103(a).

7. **35 U.S.C. §103(a).** The Examiner has rejected Claims 6, 13-14, 22, 29-30, 37-42 under 35 U.S.C. §103(a) as being unpatentable over Davis *et al* (U.S. Patent number 5,937,160), in view of Halliday *et al* (U.S. Patent number 5,880,740).

The rejection of Claims 6, 13-14, 22, 29-30, 37-42 under 35 U.S.C. §103(a) is deemed moot in view of Applicant's comments hereinabove. Therefore, Applicant respectfully requests that the Examiner withdraw the rejection under 35 U.S.C. §103(a).

8. **35 U.S.C. §103(a).** The Examiner has rejected Claims 7 and 23 under 35 U.S.C. §103(a) as being unpatentable over Davis *et al* (U.S. Patent number 5,937,160), in view of Dozier *et al* (U.S. Patent number 5,870,552).

20

The rejection of Claims 7 and 23 under 35 U.S.C. §103(a) is deemed moot in view of Applicant's comments hereinabove. Therefore, Applicant respectfully requests that the Examiner withdraw the rejection under 35 U.S.C. §103(a).

9. **35 U.S.C. §103(a).** The Examiner has rejected Claims 9 and 25 under 35 U.S.C. §103(a) as being unpatentable over Davis *et al* (U.S. Patent number 5,937,160), in view of Sakaguchi *et al*, A browsing tool of multi-lingual documents for users without multi-lingual fonts, ACM International Conference On Digital libraries, 1996, pages 63-71.

5

The rejection of Claims 9 and 25 under 35 U.S.C. §103(a) is deemed moot in view of Applicant's comments hereinabove. Therefore, Applicant respectfully requests that the Examiner withdraw the rejection under 35 U.S.C. §103(a).

10 10. **35 U.S.C. §103(a).** The Examiner has rejected Claims 15 and 31 under 35 U.S.C. §103(a) as being unpatentable over Davis *et al* (U.S. Patent number 5,937,160), in view of Bhagwat *et al*, (U.S. Patent No. 6, 563,517).

15 The rejection of Claims 15 and 31 under 35 U.S.C. §103(a) is deemed moot in view of Applicant's comments hereinabove. Therefore, Applicant respectfully requests that the Examiner withdraw the rejection under 35 U.S.C. §103(a).

01/14/2004 WED 15:03 FAX 650 474 8401 GLENN PATENT GROUP

007/015

CONCLUSION

Based on the foregoing, Applicant considers the present invention to be distinguished from the art of record. Accordingly, Applicant earnestly solicits the Examiner's withdrawal of the objections and rejections raised in the above referenced Office Action, such that a Notice of Allowance is forwarded to Applicant, and the present application is therefore allowed to issue as a United States patent.

10

Respectfully Submitted,

Michael A. Glenn

Reg. No. 30,176

15

Customer No. 22862

Amendment to the Specification

On page 34, Abstract, please replace the single paragraph with the following paragraph, as follows.

5

bl

~~A system is provided for the automatic process and delivery of media, such as images, video, and sound to a Web server. A primary feature of the invention is that it eliminates the laborious post-production work that must be done before a media asset can be delivered on a Web server. This system uses as input the original media, an HTML document or browser language having proprietary tags, Web server traffic, and Web client capabilities. This system uses the input to generate an optimized Web media, generates HTML to refer to the generated media, and automatically deploys the HTML and media to the Web server. The Web authoring process involves the creation of the media, the assignment of a unique name to the media, and the modification of the HTML document or browser language to contain a proprietary tag that contains the media's unique name, the modification to be performed on the media, and the Web page format for the media. Once the authoring is complete, it may be viewed by a client browser. The client browser retrieves the page containing the media in a standard way. A Web server passes the HTML or browser language, including ASP, JSP, and CGI, the client browser capabilities, and current server traffic to the system, which parses the HTML or browser language searching for the proprietary tags. If the proprietary tag is found, the tag is processed to generate a Web media. The system replaces the proprietary tag with standard HTML tags containing the generated media and the Web page delivery to the browser. The proprietary tag is combined with current server load~~

~~statistics and client browser capabilities to generate a key. The key is looked up in the system's database. If the key is found, the associated HTML tag is received and the proprietary tag is replaced as discussed above. If the key is not found, the system uses the HTML tag along with the client browser to generate an optimized media for the client. An HTML tag is created based on the proprietary tag and contains the generated media. The information is stored in the system database in case identical proprietary tags are processed.~~

A system using as input original media, an HTML document or browser language having proprietary tags, Web server traffic, and Web-client capabilities to generate an optimized Web media and HTML to refer to the generated media, and to automatically deploy the HTML and media to the Web server is provided. A Web authoring process is provided for facilitating creation of the media, assignment of a unique name to the media, and modification of the HTML document or browser language to contain a proprietary tag. Viewing capability is provided by the Web server passing the HTML or browser language, client browser capabilities, and current server traffic to the system, which parses the HTML or browser language searching for the proprietary tags. If a proprietary tag is found, the tag is processed to generate the Web media. Information is stored in the system database in case identical proprietary tags are processed.

20

Amendment to the Claims

Claims 1-34 (canceled)

35. (original) A process for delivering an original media, comprising the steps of:

5 placing said original media in a network system;

creating an HTML document or browser language having proprietary media tags
and placing said HTML document or browser language onto a Web server;

actuating a user request from a customer browser for a Web page by having said
Web server pass said requested Web page to an HTML parser on said network system;

10 parsing said HTML document or browser language on said parser by looking for
said proprietary media tags;

looking up said proprietary media tags in a media tags database on said network
system;

If at least one media tag of said proprietary media tags is not found,

15 generating a Web media by using said at least one media tag; placing said
generated Web media in a media cache on said network system;

converting said at least one media tag to at least one standard HTML
equivalent tag that refers to said media in said cache; and

20 storing said at least one media tag and said at least one standard HTML
equivalent tag in said database;

modifying said HTML document or browser language by replacing said at least
one media tag by said at least one standard HTML equivalent tag;

delivering said modified HTML document or browser language from said network
system to said Web server; and

delivering said modified HTML document or browser language from said Web server to said customer browser for said customer to view.

- 2
86. (original) A network system for delivering an original media, comprising:
- 5 means for placing said original media in said network system;
- means for creating HTML or browser language having proprietary media tags and placing said HTML or browser language onto a Web server;
- means for actuating a request from a customer browser for a Web page by having said Web server pass said requested Web page to an HTML parser on said
- 10 network system;
- means for parsing said HTML document on said parser by looking for said proprietary media tags;
- means for looking up said proprietary media tags in a media tags database on said network system;
- 15 if at least one media tag of said proprietary media tags is not found,
- means for generating a Web media by using said at least one media tag;
- placing said generated Web media in a media cache on said network system;
- means for converting said at least one media tag to at least one standard HTML equivalent tag that refers to said media in said cache; and
- 20 means for storing said at least one media tag and said at least one standard HTML equivalent tag in said database;
- means for generating HTML or browser language by replacing said at least one media tag by said at least one standard HTML equivalent tag;

means for delivering said generated HTML or browser language from said network system to said Web server; and

means for delivering said modified generated HTML or browser language from said Web server to said customer browser for said customer to view.

5

³
~~37~~. (currently amended) An media delivery system using a Java servlet engine, a Web server, and a customer browser for generating HTML or browser language, said generated HTML or browser language having a proprietary image, from an original HTML document or browser language embedded with a proprietary tag, comprising:

10

B² an HTML parser subsystem adapted to search for a proprietary tag in said original HTML or browser language and to replace said proprietary tag with a standard HTML tag;

a media caching subsystem adapted to determine a status of existing or needs to be created of said proprietary image for said proprietary tag, and to send said standard

15

HTML tag to said media creation subsystem;

a media cache database adapted to store data associated with said proprietary image;

a media creation subsystem adapted to decipher said proprietary tag;

20

a media processing engine adapted to receive from said media creation subsystem said deciphered proprietary tag and to interpret said tag to generate said proprietary media; and

a media repository adapted to store at least one original media associated with said proprietary media;

wherein said media cache database further comprises:

a script table having a media processing script column, an HTML Equivalent column, a Bandwidth column, a Generated File column, and a Dependency List column;
and

a dependency table having a File Name column and a Modification Date
5 column.

38. (original) The system of Claim ³37, wherein said original HTML or browser language is embedded with a plurality of proprietary tags, said proprietary tags associated with a plurality of proprietary media and associated with a plurality of original media.
10

39. (original) The system of Claim 37, wherein said stored data associated with said proprietary media further comprises:

15 a script used to create said proprietary media, said script having an associated date ;

a name of said at least one original media used to create said proprietary media, said name having an associated date; and
said generated HTML or browser language.

20 40. (original) The system of Claim ³37, wherein said HTML parser subsystem further comprises:

means for sending said proprietary tag to said media caching subsystem for further processing;

means for receiving from said media caching subsystem said standard HTML tag;

means for searching for a next proprietary tag to replace said next proprietary tag with a next standard HTML tag; and

5 means for determining that no more proprietary tags exist in said original HTML document or browser language.

8
21. (original) The system of Claim 37, wherein said media caching subsystem further comprises:

10 means for determining if said proprietary media has been modified.

6
42. (original) The system of Claim 39, wherein said media caching subsystem further comprises:

means for determining if said associated script data and said associated original media data have been modified.

43. (canceled)

44. (canceled)

20
9
45. (currently amended) A process for creating a media associated with an HTML equivalent tag and associated with a media tag for a system, comprising the steps of:
receiving a request from said system for said HTML equivalent tag;
combining said media tag with bandwidth information;

determining if a media tag entry associated with said media tag exists in a media tag database;

if said media tag entry exists in said media database,

determining if at least one original asset used to create said media has
5 changed;

If said at least one original asset used to create said media has not changed,

retrieving said HTML equivalent tag from said database; and

return said HTML equivalent tag to said system;

if said at least one original asset used to create said media has changed,

removing said media tag entry from said database;

create said media using said media tag;

storing said media in a media cache;

generating an HTML document referring to said generated media;

placing said media tag and said HTML equivalent tag in said media
15 database; and

return said HTML equivalent tag to said system;

if said media tag entry does not exist in said media database,

create said media using said media tag;

storing said media in a media cache;

20 generating HTML or browser language referring to said generated media;

placing said media tag and said HTML equivalent tag in said media database;

and

return said HTML equivalent tag to said system.

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. ☒ This communication is responsive to 1/14/2004.
2. ☒ The allowed claim(s) is/are 35-42, 45, renumbered as 1-5, 7-8, 6, 9, respectively.
3. ☐ The drawings filed on _____ are accepted by the Examiner.
4. ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some* c) ☐ None of the:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

* Certified copies not received: _____

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.
THIS THREE-MONTH PERIOD IS NOT EXTENDABLE

5. ☐ A SUBSTITUTE OATH OR DECLARATION must be submitted. Note the attached EXAMINER'S AMENDMENT or NOTICE OF INFORMAL PATENT APPLICATION (PTO-152) which gives reason(s) why the oath or declaration is deficient.
6. ☒ CORRECTED DRAWINGS (as "replacement sheets") must be submitted.
- (a) ☒ including changes required by the Notice of Draftsperson's Patent Drawing Review (PTO-948) attached
- 1) ☐ hereto or 2) ☒ to Paper No./Mail Date 7.
- (b) ☐ including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date _____.
- Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).
7. ☐ DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

Attachment(s)

1. ☐ Notice of References Cited (PTO-892)

2176	9
DATE MAILED: 05/04/2004	

APPLICATION NO.	FILING DATE	FIRST NAMED INVENTOR	ATTORNEY DOCKET NO.	CONFIRMATION NO.
09/425,326	10/21/1999	CHRISTOPHER SAMANIEGO	EQUI000	9401

TITLE OF INVENTION: AUTOMATED PROCESSING AND DELIVERY OF MEDIA TO WEB SERVERS

APPLN. TYPE	SMALL ENTITY	ISSUE FEE	PUBLICATION FEE	TOTAL FEE(S) DUE	DATE DUE
nonprovisional	YES	\$665	\$0	\$665	08/04/2004

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. **PROSECUTION ON THE MERITS IS CLOSED.** THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN **THREE MONTHS** FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. **THIS STATUTORY PERIOD CANNOT BE EXTENDED.** SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE REFLECTS A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE APPLIED IN THIS APPLICATION. THE PTOL-85B (OR AN EQUIVALENT) MUST BE RETURNED WITHIN THIS PERIOD EVEN IF NO FEE IS DUE OR THE APPLICATION WILL BE REGARDED AS ABANDONED.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status is changed, pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above and notify the United States Patent and Trademark Office of the change in status, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check the box below and enclose the PUBLICATION FEE and 1/2 the ISSUE FEE shown above.

☐ Applicant claims SMALL ENTITY status.
See 37 CFR 1.27.

II. PART B - FEE(S) TRANSMITTAL should be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). Even if the fee(s) have already been paid, Part B - Fee(s) Transmittal should be completed and returned. If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: **Mail** Mail Stop ISSUE FEE
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
or Fax (703) 746-4000

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 4 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

- ☐ A check in the amount of the fee(s) is enclosed.
- ☐ Payment by credit card. Form PTO-2038 is attached.
- ☐ The Director is hereby authorized by charge the required fee(s), or credit any overpayment, to Deposit Account Number _____ (enclose an extra copy of this form).

Director for Patents is requested to apply the Issue Fee and Publication Fee (if any) or to re-apply any previously paid issue fee to the application identified above.

(Authorized Signature)

(Date)

NOTE: The Issue Fee and Publication Fee (if required) will not be accepted from anyone other than the applicant; a registered attorney or agent; or the assignee or other party in interest as shown by the records of the United States Patent and Trademark Office.

This collection of information is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, Alexandria, Virginia 22313-1450.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

Determination of Patent Term Extension under 35 U.S.C. 154 (b)
(application filed after June 7, 1995 but prior to May 29, 2000)

The Patent Term Extension is 0 day(s). Any patent to issue from the above-identified application will include an indication of the 0 day extension on the front page.

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Extension is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) system (<http://pair.uspto.gov>).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (703) 305-1383. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (703) 305-8283.

Abstract:

A system using as input original media, an HTML document or browser language having proprietary tags, Web server traffic, and Web-client capabilities to generate an optimized Web media and HTML to refer to the generate media, and to automatically deploy the HTML and media to the Web server is provided. A Web authoring process is provided for facilitating creation of the media, assignment of a unique name to the media, and modification of the HTML document or browser language to contain a proprietary tag. Viewing capability is provided by the Web server passing the HTML or browser language, client browser capabilities, and current server traffic to the system, which parses the HTML or browser language searching for the proprietary tags. If a proprietary tag is found, the tag is processed to generate the Web media. Information is stored in the system database in case identical proprietary tags are processed.
