CORRECTIVE PATENT ASSIGNMENT AGREEMENT

This Corrective Patent Assignment Agreement (the "Corrective Assignment") is made by and between Keith Vivian Alexander, a New Zealand citizen of 65 Middleton Road, Upper Riccarton, Christchurch, New Zealand ("Alexander" or "Assignor") and Board & Batten International Inc., a Cayman Island exempted company with a principal location at c/ International Management Services Ltd, Harbour Centre 4th Floor, North Church Street, Georgetown, Cayman Islands ("BBI" or "Assignee").

WITNESSETH

WHEREAS, Alexander is a named inventor of U.S. Patent App. Ser. No. 10/582,551 (now U.S. Patent No. 7,854,687) for "Trampoline and Enclosure System" ("the '551 Application"), filed June 20, 2007 and issued December 21, 2010; and

WHEREAS, on June 20, 2007, at Reel/Frame 019456/0049, an assignment was recorded which assigned the '551 Application from Alexander to a receiving party referred to as Board & Batten Inc. (the "Original Assignment") – more specifically, the Original Assignment assigned International Application No. PCT/NZ2004/000318, which designates the United States of America and is the parent of the '551 Application; and

WHEREAS, the Original Assignment contained an unintentional typo in that the receiving party should have been identified as Board & Batten International Inc. rather than Board & Batten Inc. – i.e., the only error in the assignment was omission of the word "International" from intended receiving party Board & Batten International Inc. – with all other information accurate and complete; and

WHEREAS, this Corrective Assignment is intended to be recorded with the Assignment Branch of the U.S. Patent and Trademark Office so that the public record will reflect that Board & Batten International Inc. has in fact been the owner of the '551 Application since execution of the Original Assignment on April 12, 2007 (the "Effective Date"); and

WHEREAS, this Assignment confirms that as of the Effective Date Assignor assigned and Assignee acquired all of Assignor's right, title, and interest in and to U.S. Patent App. Ser. No. 10/582,551 (now U.S. Patent No. 7,854,687) for "Trampoline and Enclosure System," and the right to recover damages and profits for past infringement thereof, and that Assignor and Assignee have acted in accordance therewith since the Effective Date; and

NOW, THEREFORE, in consideration of these premises, the ongoing burden of maintaining various registrations and enforcement of the '551 Application, and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the parties agree as follows:

1. Assignor hereby confirms that, as of the Effective Date, Assignor assigned to Assignee its entire right, title, and interest in and to the '551 Application, including the rights to all divisionals, continuations, continuations-in-part, renewals, reissues, or substitute applications, and also including all priority rights for patent applications foreign to the United States of America. Assignor further confirms that, as of the Effective Date, Assignor transferred and conveyed to Assignee the right to recover for any past, present, and future infringement of the '551 Application assigned herein. To the extent necessary, Assignor hereby re-affirms such assignment, transfer, and conveyance of all such rights, title, and interest.

2. Assignor hereby authorizes and requests the Commissioner for Patents and Trademarks to transfer the '551 Application to Assignee.

3. Assignor agrees to execute all papers and to perform such other proper acts as Assignee may deem necessary to secure for Assignee or its designee the rights herein assigned, as necessary to perfect such rights, title, and interests in Assignee, its successors, assigns, and legal representatives.

4. The parties may execute multiple counterparts of this Corrective Assignment and each is intended to be considered as an original. The parties may substitute telecopied signature pages for original signatures.

5. This Corrective Assignment shall be governed by and construed in accordance with the laws of the United States of America.

[SIGNATURE PAGE FOLLOWS]

IN WITNESS WHEREOF, the parties have executed this Agreement on
22/9/22.

ASSIGNOR: KEITH VIVIAN ALEXANDER

A handwritten signature in black ink, appearing to read 'K.V. Alexander', written over a horizontal line.

ASSIGNEE: BOARD & BATTEN INTERNATIONAL INC.

A handwritten signature in black ink, appearing to read 'D. A.', written over a horizontal line.

ISSUE NOTIFICATION

The projected patent number and issue date are specified above.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b) (application filed on or after May 29, 2000)

The Patent Term Adjustment is 605 day(s). Any patent to issue from the above-identified application will include an indication of the adjustment on the front page.

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (<http://pair.uspto.gov>).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Application Assistance Unit (AAU) of the Office of Data Management (ODM) at (571)-272-4200.

APPLICANT(s) (Please see PAIR WEB site <http://pair.uspto.gov> for additional applicants):

Keith Vivian Alexander, Christchurch, NEW ZEALAND;

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: **Mail** Mail Stop ISSUE FEE
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
or Fax (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission

I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below.

3. ASSIGNEE NAME AND RESIDENCE DATA TO BE PRINTED ON THE PATENT (print or type)

PLEASE NOTE: Unless an assignee is identified below, no assignee data will appear on the patent. If an assignee is identified below, the document has been filed for recordation as set forth in 37 CFR 3.11. Completion of this form is NOT a substitute for filing an assignment.

(A) NAME OF ASSIGNEE

BOARD & BATTEN INC.

(B) RESIDENCE: (CITY AND STATE OR COUNTRY)

Georgetown, CAYMAN ISLANDS

Please check the appropriate assignee category or categories (will not be printed on the patent): ☐ Individual ☒ Corporation or other private group entity ☐ Government

4a. The following fee(s) are submitted:

- ☒ Issue Fee
- ☒ Publication Fee (No small entity discount permitted)
- ☒ Advance Order - # of Copies 3

4b. Payment of Fee(s): (Please first reapply any previously paid issue fee shown above)

- ☐ A check is enclosed.
- ☐ Payment by credit card. Form PTO-2038 is attached.
- ☒ The Director is hereby authorized to charge the required fee(s), any deficiency, or credit any overpayment, to Deposit Account Number 04-1406 (enclose an extra copy of this form).

5. Change in Entity Status (from status indicated above)

- ☐ a. Applicant claims SMALL ENTITY status. See 37 CFR 1.27. ☐ b. Applicant is no longer claiming SMALL ENTITY status. See 37 CFR 1.27(g)(2).

NOTE: The Issue Fee and Publication Fee (if required) will not be accepted from anyone other than the applicant; a registered attorney or agent; or the assignee or other party in interest as shown by the records of the United States Patent and Trademark Office.

This collection of information is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

-------------------------------------	--------

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

EXAMINER	
DONNELLY, JEROME W	
ART UNIT	PAPER NUMBER
3764	
DATE MAILED: 10/13/2010	

APPLICATION NO.	FILING DATE	FIRST NAMED INVENTOR	ATTORNEY DOCKET NO.	CONFIRMATION NO.
10/582,551	06/20/2007	Keith Vivian Alexander	0074-543464	4738
TITLE OF INVENTION: TRAMPOLINE AND ENCLOSURE SYSTEM				

APPLN. TYPE	SMALL ENTITY	ISSUE FEE DUE	PUBLICATION FEE DUE	PREV. PAID ISSUE FEE	TOTAL FEE(S) DUE	DATE DUE
nonprovisional	YES	\$755	\$300	\$0	\$1055	01/13/2011

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PART B - FEE(S) TRANSMITTAL

**Complete and send this form, together with applicable fee(s), to: Mail Mail Stop ISSUE FEE
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
or Fax (571)-273-2885**

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission

I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below.

(A) NAME OF ASSIGNEE

(B) RESIDENCE: (CITY and STATE OR COUNTRY)

Please check the appropriate assignee category or categories (will not be printed on the patent): ☐ Individual ☐ Corporation or other private group entity ☐ Government

4a. The following fee(s) are submitted:

- ☐ Issue Fee
- ☐ Publication Fee (No small entity discount permitted)
- ☐ Advance Order - # of Copies _____

4b. Payment of Fee(s): (Please first reapply any previously paid issue fee shown above)

- ☐ A check is enclosed.
- ☐ Payment by credit card. Form PTO-2038 is attached.
- ☐ The Director is hereby authorized to charge the required fee(s), any deficiency, or credit any overpayment, to Deposit Account Number _____ (enclose an extra copy of this form).

5. Change in Entity Status (from status indicated above)

- ☐ a. Applicant claims SMALL ENTITY status. See 37 CFR 1.27.
- ☐ b. Applicant is no longer claiming SMALL ENTITY status. See 37 CFR 1.27(g)(2).

NOTE: The Issue Fee and Publication Fee (if required) will not be accepted from anyone other than the applicant; a registered attorney or agent; or the assignee or other party in interest as shown by the records of the United States Patent and Trademark Office.

This collection of information is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

DATE MAILED: 10/13/2010				

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b) (application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 134 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 134 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (<http://pair.uspto.gov>).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. ☒ This communication is responsive to Amendment dated 9-21-2010
2. ☒ The allowed claim(s) is/are 9-12 and 17-20
3. ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some* c) ☐ None of the:
- ☒ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

* Certified copies not received: _____.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.
THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.

4. ☐ A SUBSTITUTE OATH OR DECLARATION must be submitted. Note the attached EXAMINER'S AMENDMENT or NOTICE OF INFORMAL PATENT APPLICATION (PTO-152) which gives reason(s) why the oath or declaration is deficient.
5. ☐ CORRECTED DRAWINGS (as "replacement sheets") must be submitted.
- (a) ☐ including changes required by the Notice of Draftsperson's Patent Drawing Review (PTO-948) attached
- 1) ☐ hereto or 2) ☐ to Paper No./Mail Date _____.
- (b) ☐ including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date _____.
- Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).
6. ☐ DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

RESPONSE TO NON-FINAL ACTION

In response to the Official Action mailed on December 28, 2009, the Applicant submits the following.

Amendments to the **Claims** begin at **page 2**.

Responsive **Remarks** begin at **page 5**.

Application of Keith Vivian Alexander
Application No. 10/582,551
Confirmation No. 4738
Docket No. 0074-543464

Amendments to the Claims

1.-8. (Cancelled)

9. (Currently amended) A trampoline and enclosure system comprising:

 a trampoline comprising a flexible mat and a plurality of coil springs holding the mat in tension within a peripheral frame of the trampoline which surrounds the mat; and

 an enclosure system comprising a barrier of a flexible net material surrounding the mat above the mat and having a lower peripheral part coupled directly or indirectly to a periphery of the mat and a plurality of resiliently flexible generally upright enclosure support members outside of the barrier relative to the mat and which are connected at or towards the lower ends of the enclosure support members to the frame of the trampoline so that in their natural rest state ~~(when connected only at the lower ends to the frame of the trampoline)~~ the enclosure support members extend away from the mat, and which are connected to the barrier net only at or near an upper peripheral part of the barrier to hold the net in tension above the mat, and which enclosure support members are also connected together at or towards the upper ends of the enclosure support member to draw the upper ends of the enclosure support members away from their natural rest state ~~(when connected only at their lower ends to the frame of the trampoline)~~ and towards the centre of the mat, so that when impacted by a user against the barrier on one side of the enclosure causing the barrier and enclosure support member on that side of the enclosure to resiliently deform away from the mat, the enclosure support members and barrier on the opposite side of the enclosure will be resiliently deformed towards the centre of the mat.

10. (Currently amended) A trampoline and enclosure system according to claim ~~10~~ 9,

Application of Keith Vivian Alexander
Application No. 10/582,551
Confirmation No. 4738
Docket No. 0074-543464

wherein the enclosure support members are pultruded fibreglass rods.

11. (Currently amended) A trampoline and enclosure system comprising:

a trampoline comprising a flexible mat and a plurality of coil springs holding the mat in tension within a peripheral frame of the trampoline which surrounds the mat; and

an enclosure system comprising a barrier of a flexible net material surrounding the mat above the mat and having a lower peripheral part coupled directly or indirectly to a periphery of the mat and a plurality of resiliently flexible generally upright enclosure support members outside of the barrier relative to the mat and which are connected at or towards the lower ends of the enclosure support members to the frame of the trampoline and which are connected to the barrier net only at or near an upper peripheral part of the barrier to hold the net in tension above the mat, and which enclosure support members are also connected together at or towards the upper ends of the enclosure support members to draw the upper ends of the enclosure support members away from their natural rest state (~~when connected only at their lower ends to the frame of the trampoline~~) and towards the centre of the mat, so that when impacted by a user against the barrier on one side of the enclosure causing the barrier and enclosure support members on that side of the enclosure to resiliently deform away from the mat, the enclosure support members and barrier on the opposite side of the enclosure will be resiliently deformed towards the centre of the mat.

12. (Original) A trampoline and enclosure system according to claim 11, wherein the enclosure support members are pultruded fibreglass rods.

Application of Keith Vivian Alexander
Application No. 10/582,551
Confirmation No. 4738
Docket No. 0074-543464

13.-16. (Cancelled)

17. (Currently amended) A trampoline and enclosure system according to claim ~~13~~ 11 wherein the enclosure support members are connected together at or towards their upper ends by an upper peripheral part of the barrier.

18. (Currently amended) A trampoline and enclosure system according to claim ~~13~~ 11 wherein the enclosure support members are connected together at or towards their upper ends by a flexible connecting element

19. (Previously presented) A trampoline and enclosure system according to claim 18 wherein said flexible connecting element is fixed to or integral with the barrier at or towards an upper peripheral part of the barrier.

20. (Currently amended) A trampoline and enclosure system according to claim ~~13~~ 11 wherein the enclosure support members are connected to the frame of the trampoline below the surface of the mat.

21.-24. (Cancelled)

Application of Keith Vivian Alexander
Application No. 10/582,551
Confirmation No. 4738
Docket No. 0074-543464

REMARKS

No new matter has been introduced into this application by reason of the amendments presented hereinabove. It is respectfully requested that the foregoing amendments to the Claims be entered prior to the next examination of this application.

35 USC 102(b): Claims 1-3, 5-8, 13-15, 17-21, and 23

The Examiner rejected Claims 1-3, 5-8, 13-15, 17-21, and 23 under 35 USC 102(b) as being anticipated by US Patent No. 6,053,845 (Publicover). Claims 1-3, 5-8, 13-15, 21, and 23 have been cancelled. Therefore, the rejection is moot as to those claims. Claims 17-20 now depend from Claim 11 which was indicated to be allowable. As dependent claims, Claims 17-20 include all of the features of Claim 11, therefore those claims are allowable for at least the same reasons as Claim 11.

35 USC 112, First Paragraph: Claims 1-12, 23, and 24

The Examiner rejected Claims 1-12, 23, and 24 under 35 USC 112, first paragraph. In making the rejection the Examiner asserted that the expressions in parentheses in Claims 1, 9, 11, and 23 do not have written support in the specification. Claims 9 and 11 have been amended to delete the expressions in parentheses. Accordingly, it is believed that Claims 9 and 11 are in condition for allowance. The rejection is moot as to Claims 1 and 23 in view of the cancellation of those claims.

Formal Objections to the Claims

The Examiner objected to the form of Claim 10 because the claim recites an improper

Application of Keith Vivian Alexander
Application No. 10/582,551
Confirmation No. 4738
Docket No. 0074-543464

dependency. Claim 10 has been amended to refer to Claim 9. Thus, it is believed that Claim 10 is now in proper form.

35 USC 103(a): Claims 4, 10, 16, and 22

The Examiner rejected Claims 4, 10, 16, and 22 under 35 USC 103(a) as being unpatentable over Publicover in combination with US Patent No. 6,319,174 (Alexander). This rejection is moot in view of the cancellation of Claims 4, 16, and 22.

In so far as the rejection is applied to Claim 10, it is not understood. Claim 10 depends from Claim 9. Even though Claim 10 as previously presented referred to Claim 10, the Examiner stated that Claim 10 was examined as if it depends from Claim 9. However, Claim 9 was indicated as being allowable over the references of record in this application. Since Claim 10 depends from Claim 9, Claim 10 necessarily includes all of the features of Claim 9. Therefore, Claim 10 is allowable over the cited references for at least the same reasons as Claim 9.

Additional Remarks

In the Official Action the Examiner indicated that Claim 9 was objected to as being dependent from a rejected base claim. For the record, the Applicant notes that Claim 9 is and has been an independent claim in this application. A true and correct copy of the USPTO Claims Worksheet (Form PTO-2022) for this application is attached. The worksheet confirms that Claim 9 was filed as an independent claim. None of the amendments filed in this application changed Claim 9 to a dependent claim. Accordingly, the Applicant interprets the Examiner's statement as an indication that Claim 9 is allowable over the prior art of record subject to resolution of the rejection under Section 112.

Application of Keith Vivian Alexander
Application No. 10/582,551
Confirmation No. 4738
Docket No. 0074-543464

CONCLUSION

In view of the foregoing amendments and remarks, it is believed that the claims pending in this application are in condition for allowance. The Applicant respectfully requests that the Examiner reconsider the rejection of the application in the light of the foregoing amendments and remarks.

Respectfully submitted,

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/582,551	Applicant(s) ALEXANDER, KEITH VIVIAN	
	Examiner JEROME W. DONNELLY	Art Unit 3764	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) ____ is/are pending in the application. 1-23
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) ____ is/are rejected. 1-23
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. ____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 3764

In view of applicants remarks dated 6-10-09, the prior art of Culling will not be re-applied in this office action. This office action is non-final. The examiners reply is as follows:

Claim 9 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 11 and 12 are** allowed.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 5-8, 13-15, 17-21 and 23 are rejected under 35 U.S.C. 102(e) as being anticipated by Publicover.

Publicover discloses a trampoline comprising: a flexible mat (40), springs (39), a frame (34) an enclosure (100) having a lower part connected indirectly to the mat, a plurality of support members (84). The support member connected at their lower ends to the frame and at their upper ends to the barrier. The upper ends of the support members connected together by element (108).

Claims 1-12, 23 and 24 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application

Art Unit: 3764

was filed, had possession of the claimed invention. In the claims "(when connected only at their lower ends to the frame of the trampoline) is considered as indefinite. When exactly is the lower end connected and when is it not?

Currently claim 10, depends from claim 10, claim 10 has been examined as if it depends from claim 9.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4, 10, 16 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Publicover in view of Alexander.

Cullings discloses his device having rods, Cullings does not disclose his rods as being pultruded.

Alexander discloses his devices including pultruded rods.

Given the above teaching the examiner notes that it would have been obvious to one of ordinary skill in the art to provide pultruded rods as part of the device of Publicover for the purpose of removably positioning the poles of publicover away from a user when exercising and providing an extra degree of resiliency to the poles of Publicover.

Art Unit: 3764

Any inquiry concerning this communication should be directed to Jerome Donnelly at telephone number (571)272-4975.

For: A Trampoline and Enclosure System	:	

RESPONSE TO NON-FINAL ACTION

In response to the Official Action mailed on February 10, 2009, the Applicant submits the following.

Amendments to the **Claims** begin at **page 2**.

Responsive **Remarks** begin at **page 9**.

Amendments to the Claims

1. (original) A trampoline and enclosure system comprising:
a trampoline comprising a flexible mat and a plurality of springs holding the mat in tension within a peripheral frame of the trampoline which surrounds the mat; and
an enclosure system comprising a barrier of a flexible material surrounding the mat above the mat and having a lower peripheral part coupled directly or indirectly to the mat and a plurality of resiliently flexible generally upright enclosure support members outside of the barrier relative to the mat and which are connected at or towards the lower ends of the enclosure support members to the frame of the trampoline and at or towards their upper ends to the barrier at or near an upper peripheral part of the barrier to support the barrier above the mat, and which are free to resiliently deform away from the mat when impacted by a user against the barrier or an enclosure support member, and which are also connected together at or towards the upper ends of the enclosure support members to draw and pre-tension the upper ends of the enclosure support members away from their natural rest state (when connected only at their lower ends to the frame of the trampoline) and towards the centre of the mat.
2. (original) A trampoline and enclosure system according to claim 1, wherein said barrier comprises a flexible net material.
3. (previously presented) A trampoline and enclosure system according to claim 1 wherein the enclosure support members hold the barrier in tension.
4. (previously presented) A trampoline and enclosure system according to claim 1 wherein the enclosure support members are pultruded fibreglass rods.

5. (previously presented) A trampoline and enclosure system according to claim 1 wherein the enclosure support members are connected together at or towards their upper ends by an upper peripheral part of the barrier.

6. (previously presented) A trampoline and enclosure system according to claim 1 wherein the enclosure support members are connected together at or towards their upper ends by a flexible connecting element.

7. (original) A trampoline and enclosure system according to claim 6 wherein said flexible connecting element is fixed to or integral with the barrier at or towards an upper peripheral part of the barrier.

8. (previously presented) A trampoline and enclosure system according to claim 1 wherein the enclosure support members are connected to the frame of the trampoline below the surface of the mat.

9. (original) A trampoline and enclosure system comprising:
a trampoline comprising a flexible mat and a plurality of coil springs holding the mat in tension within a peripheral frame of the trampoline which surrounds the mat; and
an enclosure system comprising a barrier of a flexible net material surrounding the mat above the mat and having a lower peripheral part coupled directly or indirectly to a periphery of the mat and a plurality of resiliently flexible generally upright enclosure support members outside of the barrier relative to the mat and which are connected at or towards the lower ends of

the enclosure support members to the frame of the trampoline so that in their natural rest state (when connected only at the lower ends to the frame of the trampoline) the enclosure support members extend away from the mat, and which are connected to the barrier net only at or near an upper peripheral part of the barrier to hold the net in tension above the mat, and which enclosure support members are also connected together at or towards the upper ends of the enclosure support member to draw the upper ends of the enclosure support members away from their natural rest state (when connected only at their lower ends to the frame of the trampoline) and towards the centre of the mat, so that when impacted by a user against the barrier on one side of the enclosure causing the barrier and enclosure support member on that side of the enclosure to resiliently deform away from the mat, the enclosure support members and barrier on the opposite side of the enclosure will be resiliently deformed towards the centre of the mat.

10. (original) A trampoline and enclosure system according to claim 10, wherein the enclosure support members are pultruded fibreglass rods.

11. (original) A trampoline and enclosure system comprising:

a trampoline comprising a flexible mat and a plurality of coil springs holding the mat in tension within a peripheral frame of the trampoline which surrounds the mat; and

an enclosure system comprising a barrier of a flexible net material surrounding the mat above the mat and having a lower peripheral part coupled directly or indirectly to a periphery of the mat and a plurality of resiliently flexible generally upright enclosure support members outside of the barrier relative to the mat and which are connected at or towards the lower ends of the enclosure support members to the frame of the trampoline and which are connected to the barrier net only at or near an upper peripheral part of the barrier to hold the net in tension above

the mat, and which enclosure support members are also connected together at or towards the upper ends of the enclosure support members to draw the upper ends of the enclosure support members away from their natural rest state (when connected only at their lower ends to the frame of the trampoline) and towards the centre of the mat, so that when impacted by a user against the barrier on one side of the enclosure causing the barrier and enclosure support members on that side of the enclosure to resiliently deform away from the mat, the enclosure support members and barrier on the opposite side of the enclosure will be resiliently deformed towards the centre of the mat.

12. (original) A trampoline and enclosure system according to claim 11, wherein the enclosure support members are pultruded fibreglass rods.

13. (new) A trampoline and enclosure system comprising:

a trampoline comprising a flexible mat and a plurality of springs holding the mat in tension within a peripheral frame of the trampoline which surrounds the mat;

a barrier of a flexible material surrounding the mat above the mat and having a lower peripheral part coupled directly or indirectly to the mat; and

a plurality of generally upright enclosure support members outside of the barrier relative to the mat which are resiliently flexible over at least the major part of the lengths thereof and which are retained at or towards the lower ends of the enclosure support members and which support the barrier above the mat, which are free to deform away from the mat when impacted by a user against an enclosure support member and/or against said barrier of flexible material, the barrier connecting together the enclosure support members at or towards an upper peripheral edge part of the barrier and at or towards the upper ends of the enclosure members so that at least

said upper peripheral part of the net is in tension and so that such resilient deformation of one of the enclosure support members away from the mat causes resilient deformation of opposite enclosure support members towards the mat.

14. (new) A trampoline and enclosure system according to claim 13, wherein said barrier comprises a flexible net material.

15. (new) A trampoline and enclosure system according to claim 13 wherein the enclosure support members hold the barrier in tension.

16. (new) A trampoline and enclosure system according to claim 13 wherein the enclosure support members are pultruded fibreglass rods.

17. (new) A trampoline and enclosure system according to claim 13 wherein the enclosure support members are connected together at or towards their upper ends by an upper peripheral part of the barrier.

18. (new) A trampoline and enclosure system according to claim 13 wherein the enclosure support members are connected together at or towards their upper ends by a flexible connecting element

19. (new) A trampoline and enclosure system according to claim 18 wherein said flexible connecting element is fixed to or integral with the barrier at or towards an upper peripheral part of the barrier.

20. (new) A trampoline and enclosure system according to claim 13 wherein the enclosure support members are connected to the frame of the trampoline below the surface of the mat.

21. (new) A trampoline and enclosure system comprising:

a trampoline comprising a flexible mat and a plurality of coil springs holding the mat in tension within a peripheral frame of the trampoline which surrounds the mat;

a barrier of a flexible material surrounding the mat above the mat and having a lower peripheral part coupled directly or indirectly to the mat; and

a plurality of enclosure support members coupled to the trampoline only by a lower end of each enclosure support member being retained by the base frame of the trampoline, and which extend above the mat to support the barrier above the mat, and which are each resiliently flexible over substantially the entire length thereof and the barrier connecting together the enclosure support members at or towards an upper peripheral edge part of the barrier and at or towards the upper ends of the enclosure support members so that at least said upper peripheral part of the barrier is in tension and so that such resilient deformation of one of the enclosure support members away from the mat causes resilient deformation of opposite enclosure support members towards the mat.

22. (new) A trampoline and enclosure system according to claim 21, wherein the enclosure support members are pultruded fibreglass rods.

23. (new) A trampoline and enclosure system comprising:

a trampoline comprising a flexible mat and a plurality of coil springs holding the mat in

tension within a peripheral frame of the trampoline which surrounds the mat;

a barrier of a flexible material surrounding the mat above the mat and having a lower peripheral part coupled directly or indirectly to the mat; and

a plurality of resiliently flexible generally upright enclosure support members outside of the barrier relative to the mat and which are retained at or towards the lower ends of the enclosure support members by the frame of the trampoline and which support the barrier above the mat, which enclosure support members are connected together at or towards the upper ends of the enclosure support members to draw the upper ends of the enclosure support members away from their natural rest state (when connected only at their lower ends to the frame of the trampoline), and towards the centre of the mat to tension the barrier.

24. (new) A trampoline and enclosure system according to claim 23, wherein the enclosure support members are pultruded fibreglass rods.

U.S. Appln. No. 10/582,551
Confirmation No. 4738
Docket No. 0074-543464

REMARKS

No new matter has been introduced into this application by reason of the amendments presented hereinabove. It is respectfully requested that the foregoing amendments to the Claims be entered prior to the next examination of this application.

35 USC 102(e): Claims 1-3, 5-7, 9, and 11

The Examiner rejected Claims 1-3, 5-7, 9, and 11 under 35 USC 102(e) as being anticipated by US Patent Application Publication No. 2006/0270525 (Colling). This rejection is clearly erroneous because Colling is not properly citable against the present application under 35 USC 102(e).

Colling claims the benefit of US Provisional Application No. 61/684,106, filed May 24, 2005. Therefore, the earliest effective U.S. filing date to which Colling may be entitled is May 24, 2005. The present application is the US national stage of International Application No. PCT/NZ2004/000318, which has an international filing date of December 9, 2004. Colling was not filed in the U.S. before the Applicant's international filing date. Consequently, Colling is not available as a reference in a rejection of the claims of the present application under 35 USC 102(e). Accordingly, the rejection is improper and should be withdrawn.

35 USC 103(a): Claim 8

The Examiner rejected Claim 8 under 35 USC 103(a) as being unpatentable over Colling in combination with US Patent No. 6,053,845 (Publicover et al.). This rejection is also clearly erroneous to the extent that it relies on Colling, because Colling is not available as a reference in a rejection of the claims of the present application for the same reasons set forth above. Therefore, the rejection of Claim 8 under 35 USC 103(a) is improper and should be withdrawn.

U.S. Appln. No. 10/582,551
Confirmation No. 4738
Docket No. 0074-543464

35 USC 103(a): Claims 4, 10, and 12

The Examiner rejected Claims 4, 10, and 12 under 35 USC 103(a) as being unpatentable over Colling in combination with US Patent No. 6,319,174 (Alexander). This rejection is also clearly erroneous to the extent that it relies on Colling, because Colling is not available as a reference in a rejection of the claims of the present application for the same reasons set forth above. Therefore, the rejection of Claims 4, 10, and 12 under 35 USC 103(a) is improper and should be withdrawn.

CONCLUSION

In view of the foregoing remarks, it is believed that claims of this application are in condition for allowance. The Applicant respectfully requests that the Examiner reconsider the rejection in the light of the foregoing remarks.

Respectfully submitted,

DANN, DORFMAN, HERRELL AND SKILLMAN

Information:

Total Files Size (in bytes): 385660

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE ____ MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-12 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-12 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. ____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 3764

Claims 1-3, 5, 6, 7, 9 and 11 are rejected under 35 U.S.C. 102(e) as being anticipated by Colling.

Colling discloses a trampoline and net enclosure, having springs, and a mat supported by the springs, and a frame.

Colling discloses a bottom end of the net connected to the mat and support members as claimed.

Note that the support members, (at least two are connected together at their upper ends by at least one horizontal member).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Colling in view of Public over et al.

Colling does not disclose his support members connected to his frame below the surface of his mat, Publicover et al does.

Given the above teaching the examiners not that to fasten pole members of an enclosure system to the frame of a trampoline below a mat surface is known and obvious for the purpose of providing stability to the pole members of Colling.

Art Unit: 3764

Claims 4, 10 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Colling in view of Alexander.

Colling discloses his device having rods, Colling does not disclose his rods as being pultruded.

Alexander discloses his device including pultruded rods.

Given the above teaching the examiner notes that it would have been obvious to one of ordinary skill in the art to provide pultruded rods as part of the device of Collings for the purpose of removably positioning the poles of Collings away from a user when exercising and providing an extra degree of resiliency to the poles of Collings.

Any inquiry concerning this communication should be directed to Jerome Donnelly at telephone number (571)272-4975.

(54) Title: EDGE FITTINGS FOR SOFT-EDGED TRAMPOLINES

(57) Abstract: A soft-edged trampoline includes a flexible mat (1) supported from a base frame (3) by a plurality of resiliently flexible rods (2). Each rod (2) has an enlarged upper end (12). A plurality of fittings (6) coupled to the mat (1) about the periphery of the mat each include a socket cavity (10) which receives the enlarged upper end (12) of a flexible rod, so that the upper ends of the flexible rods are pivotally connected to the periphery of the mat.

EDGE FITTINGS FOR SOFT-EDGED TRAMPOLINES

FIELD OF INVENTION

- 5 The invention relates to a trampoline for sporting and/or recreational use which is soft-edged relative to conventional trampolines which support the mat of the trampoline via a solid peripheral frame and exposed springs between the frame and the mat.

BACKGROUND

10

- US patent 6,319,174 discloses a form of soft-edged trampoline in which the mat of the trampoline is supported by a plurality of resiliently flexible rods received in a frame of the trampoline at the lower ends of the rods and coupled to the periphery of the bouncing mat of the trampoline at their upper ends, and which avoids the need for a solid frame about the exterior of the bouncing mat and exposed springs between the frame and periphery of the mat.
- 15

SUMMARY OF THE INVENTION

- 20 The invention provides an improved or at least alternative form of such a soft-edged trampoline.

- In broad terms in one aspect the invention comprises a trampoline including a flexible mat, a plurality of resiliently flexible rods each having a lower end retained in a frame of the trampoline and an enlarged upper end, and a plurality of fittings having a greater dimension approximately in the plane of the mat than in a direction through the mat, coupled to the mat about a periphery of the mat and including on or in an underside of each fitting a socket cavity which receives the enlarged upper end of a flexible rod, so that the upper ends of the flexible rods are pivotally connected to the periphery of the mat.
- 25
- 30

Preferably the fittings have an outer edge adjacent an outer edge of the mat, which outer edge of the fittings is wider approximately in the plane of the mat than an inner edge of the fittings. Typically the widest dimension of the fittings approximately in the plane of the mat is at an outer edge of the fittings closest to an outer edge of the mat. In one
5 form the fittings have an approximate truncated triangular shape in plan view.

Preferably the fittings are positioned within a pocket or pockets in or adjacent to the peripheral edge of the mat. A part of the mat defining the pocket or pockets wraps around the outer edge of the fittings.

10

In broad terms in another aspect the invention comprises a trampoline including a flexible mat, a plurality of resiliently flexible rods each having a lower end retained in a frame of the trampoline and an enlarged upper end, and a plurality of fittings coupled to the mat about a periphery of the mat and including on or in an underside of each fitting a
15 socket cavity which receives the enlarged upper end of a flexible rod so that the upper ends of the flexible rods are pivotally connected to the periphery of the mat, and wherein the fittings have a wide outer edge adjacent an outer edge of the mat which engages a pocket or pockets about or in the periphery of the mat.

20 In broad terms in a further aspect the invention comprises a trampoline including a flexible mat, a plurality of fittings coupled to the mat about a periphery of the mat, a plurality of resiliently flexible rods each having a lower end retained in a frame of the trampoline and an upper end connected to a said fitting, and or in an underside of each fitting a socket cavity which receives an enlarged upper end of the flexible rod
25 connected to the fitting or a ball shaped portion which is received by a socket cavity on the end of the rod connected to the fitting, so that the upper ends of the flexible rods are pivotally connected to the periphery of the mat.

In the trampoline of the invention the coupling of the upper ends of the rods to the
30 periphery of the mat via fittings having a cavity on the underside of the fittings and enlarged upper ends of the rods (or vice versa) provides a number of advantages. The

end of the rod is enclosed so that it is much less likely to cause harm to a user falling On
the edge of the trampoline. A more secure coupling between the ends of the rods and
the mat, so that the rods remain more securely attached while the trampoline is in use, is
achieved. And the connection allows easy assembly and disassembly of the rod-spring
5 from the mat edge. Trampolines are generally freighted to the purchaser in dis-
assembled form and it is essential that the purchaser can assemble the trampoline from
the separate components without difficulty.

10 In this specification (including claims) the term "trampoline" is intended to extend to
smaller trampolines commonly referred to as rebounders also, as well as larger
trampolines of all sizes.

BRIEF DESCRIPTION OF THE DRAWINGS

15 Preferred forms of trampoline are described with reference to the accompanying
drawings by way of example and without intending to be limiting, wherein:

Figure 1 is a perspective view of a preferred form trampoline,

Figure 2 is a side view of the trampoline of Figure 1,

20 Figure 3 is similar to Figure 1 but of one side of the trampoline only and
showing a portion of the edge of the mat of the trampoline cut away, and

Figure 3a is an enlarged view of the cut away edge portion of the trampoline,

Figure 4 shows an individual fitting and rod end separate from the other
components of the trampoline,

Figure 5 shows the fitting and rod end connected together, from below,

25 Figure 6 shows the fitting alone from below,

Figure 7 is an enlarged part cross-sectional view of the end part of a rod and a
rod end,

Figure 8 shows a portion of the periphery of the mat of the trampoline, showing
a single fitting in position within a pocket in the periphery of the mat, and

Figure 9 shows an alternative arrangement where the fittings around the periphery of the trampoline are coupled together by a flexible tongue and recess connection between adjacent fittings.

5 DETAILED DESCRIPTION OF PREFERRED FORMS

Referring to Figures 1 to 3, the preferred form trampoline comprises a flexible mat 1 on which users may bounce, a plurality of resiliently flexible rods 2, and a base frame 3. The preferred form trampoline shown is circular in shape but the trampoline could be of
10 any other desired shape such as oval, square, rectangular or similar.

The base frame of the preferred form trampoline comprises a circular beam 4 typically formed of steel or aluminium for example, which may be supported from the ground by
15 legs 5.

The rods 2 are typically fibre glass rods but may alternatively be formed of spring steel for example. The lower ends of the rods are retained by the base frame 3 and the upper ends of the rods connect to fittings 6 as will be further described, which are coupled to the mat 1 about the periphery of the mat. In the preferred form the lower ends of the
20 rods 2 enter into tubular holders 7 fixed to the circular beam as shown, but the lower ends of the rods may be coupled to the circular beam, or a base frame of the trampoline of any other form, in any suitable way.

In the preferred form the mat, which is typically heavy canvas or a woven synthetic
25 material, is doubled back upon itself and fixed by stitching for example about the periphery of the mat to form a continuous pocket 8 extending about the periphery of the mat. A number of the fittings 6 are positioned within this pocket in the peripheral edge of the mat as shown in Figure 3 in particular and also Figure 8. The fittings may be loosely captured within the pocket or alternatively may be stitched to the mat within the
30 edge pocket, or mechanically fastened to the mat via rivets for example.

The rods have enlarged upper ends which connect to the fittings 6. Figures 4 to 8 show a fitting and the connection of a rod end to the fitting in more detail. Preferably the fittings have a generally planar body portion 9, and a socket cavity 10 is defined on or in an underside of the body portion 9 of the fitting. The body 9 of the fitting of the fitting
5 has a greater dimension approximately in the plane of the mat than in a direction through the mat. Typically the fittings will be formed from a plastics material, by injection moulding for example. In the preferred form portion 11 extends downwardly from the underside of the fitting to define the socket cavity 10. The enlarged rod end fits 12 into the socket cavity 10, as shown into Figure 6 in particular. The fitting may
10 optionally include a slight dome 18 on body of the fitting over the socket cavity 10.

Also in the preferred form the fittings have an outer edge 13 which in use is closest to the outer peripheral edge of the mat, which edge 13 is wider in the plane of the mat than an inner edge of the fittings. The particular fitting 6 shown has an approximate
15 truncated triangular shape in plan view, with concave sides, but this is non-limiting and in other forms the fitting could be alternatively shaped.

In the preferred form the part of the mat which is doubled back to define the pocket 8 in the peripheral edge of the mat wraps around the outer edges 13 of the fittings 6, as
20 shown in Figures 3 and 3A so that in use the outer edges of the fittings contact the inside surface of the pocket at its outer edge as shown, which assists in transferring forces between the fitting and the mat or vice versa. This may not be essential however, and in an alternative form individual pockets may be formed adjacent but spaced from the outer most peripheral edge of the mat, and defined by stitching through the mat to form
25 the pockets which each receive and retain a fitting. Alternatively again the fittings may instead of being received in a pocket or pockets in the outer edge of the mat, be stitched directly to the mat adjacent its outer edge, or mechanically fastened to the mat.

In use as the trampoline is bounced on by a user, this will cause pivotal movement between the upper ends 12 of the rods 2 and the fittings 6 coupled to the mat, to a
30 greater or lesser extent depending upon the size and energy of the user. If the user bounces close to a part of the edge of the mat, significant movement of the ball ends 12

of the few rods closest to the point where the user bounces will pivot significantly within the socket cavities 10 in the fittings. A relatively secure and safe coupling of the upper ends of the rods to the mat is provided, without adversely affecting the performance of the trampoline is use. In addition the ends of the flexible rods are enclosed to increase protection to a user falling on the edge of the trampoline. At the same time assembly and disassembly of the trampoline and in particular connection between the individual rods and the mat can be carried out with relative ease. Typically the trampoline will be delivered to a purchaser in disassembled form. The purchaser need only insert the lower ends of the rods into the trampoline base, loosely place the mat over the trampoline base, and then bend each resilient rod as required to engage the ball ends 12 of the rod into the socket cavities of the fittings 6. The rod ends can enter the fittings from the side.

In the preferred form the portion 10 of the fitting on the underside of the body 9 of the fitting which defines the socket cavity includes a part 14 which extends inwardly towards the centre of the trampoline to ensure the fitting slides over the rod below in the event of a heavy bounce on the adjacent trampoline edge. This inward extension prevents the fitting from catching on the rod below and forcing the lower rod loose from its fitting.

Figure 8 shows a preferred connection between a fibreglass rod 2 and a separately formed ball shaped upper end part 12, which is typically injection moulded from a plastics material. An annular groove 15 is formed around the rod end as shown. A cavity is formed in the ball end part 12 which enables the end part 12 to be fitted to the rod end. The ball end part 12 includes an annular protrusion 16, which when the ball part is fitted to the rod end will snap fit into the annular groove 15. Alternatively the plastic ball part 12 may snap fit over an annular protrusion or protrusions around the rod end. Any suitable mechanical arrangement may be employed. Alternatively separately formed ball parts 12 may be bonded to the rod ends. The plastic ball parts 12 may optionally have a flattened end surface 19 which assists in stabilising the ball parts if

they are placed upside down on a surface during insertion of the rods 2 during assembly of a trampoline.

Figure 9 shows an alternative form where the fittings 6 are coupled together. The fittings 6 are generally similar to those described previously but each include an integrally moulded flexible plastic tongue 20 on one side and corresponding recess on the other side, so that the flexible tongue 20 of one fitting engages into the recess 21 in the adjacent fitting in the assembled trampoline. The depth of the recess 21 is sufficient to allow movement of the tongue into and from the recess as a user bounces on the trampoline and during use the tongue 20 will flex, particularly when a user bounces near the edge of the trampoline. In a yet further alternative form, the adjacent fittings 6 may slidably overlap with one another.

In the preferred forms described above a ball shaped end part on the rods 2 is received in a socket cavity of the fittings 6. In an alternative form the upper end of each rod may provide a socket cavity in which is received a ball shaped portion moulded on the underside of the fittings 6. The socket cavity on the upper end of the rod may be defined by an injection moulded plastic part fitted to the end of the rod.

The foregoing describes the invention including preferred forms thereof. Alterations and modifications as will be obvious to those skilled in the art are intended to be incorporated within the scope hereof as defined in the accompanying claims.

CLAIMS:

1. A trampoline including
a flexible mat
5 a plurality of resiliently flexible rods each having a lower end retained in a frame of the trampoline and an enlarged upper end, and
plurality of fittings having a greater dimension approximately in the plane of the mat than in a direction through the mat, coupled to the mat about a periphery of the mat and including on or in an underside of each fitting a socket cavity which receives
10 the enlarged upper end of a flexible rod, so that the upper ends of the flexible rods are pivotally connected to the periphery of the mat.
2. A trampoline according to claim 1 wherein the fittings have an outer edge adjacent an outer edge of the mat, which outer edge of the fittings is wider
15 approximately in the plane of the mat than an inner edge of the fittings.
3. A trampoline according to claim 1 or claim 2 wherein the widest dimension of the fittings approximately in the plane of the mat is at an outer edge of the fittings closest to an outer edge of the mat.
20
4. A trampoline according to any one of claims 1 to 3 wherein the fittings have an approximate truncated triangular shape in plan view.
5. A trampoline according to any one of claims 1 to 4 wherein the fittings are
25 positioned within a pocket or pockets in or adjacent the peripheral edge of the mat.
6. A trampoline according to any one of claims 1 to 5 wherein a part of the mat defining the pocket or pockets wraps around the outer edge of the fittings.
- 30 7. A trampoline according to any one of claims 1 to 6 wherein the fittings are stitched to the mat or otherwise mechanically fastened to the mat.

8. A trampoline according to any one of claims 1 to 7 wherein a part of the each fitting which defines the socket cavity in or on the underside of the fitting, which receives the enlarged upper end of a flexible rod, depends downwardly from the underside of the fitting.

5

9. A trampoline according to claim 8 wherein the part of the fitting which depends downwardly from the underside of the fitting to define the socket cavity includes a portion which extends towards the centre of the trampoline and shaped to further assist in preventing the enlarged end of a rod from dislodging from the fitting during use of the trampoline.

10

10. A trampoline according to any one of claims 1 to 9 wherein the fittings are one piece fittings formed from a plastics material.

15

11. A trampoline according to any one of claims 1 to 10 wherein the fittings slidably overlap with adjacent fittings or are slidably or flexibly coupled to adjacent fittings.

20

12. A trampoline according to any one of claims 1 to 11 wherein the enlarged upper ends of the rods are approximately ball shaped.

25

13. A trampoline according to any one of claims 1 to 12 wherein the enlarged upper ends of the rods are separately formed from the rods and are fitted to the upper ends of the rods.

30

14. A trampoline according to claim 13 wherein the rods include an annular groove around the rod ends spaced from the ends of the rods and the separately formed enlarged upper end parts include one or more protrusions arranged to snap fit into the annular grooves about the ends of the rods to fix the enlarged end parts to the rods.

15. A trampoline according to claim 13 wherein the rods include an annular protrusion or protrusions spaced annularly around the rods adjacent the ends of the rods

and the separately formed enlarged upper end parts snap fit over said protrusion or protrusions to fix the end parts to the rods.

16. A trampoline according to either one of claims 14 and 15 wherein the end parts
5 have a flattened end surface.

17. A trampoline according to any one of claims 1 to 16 wherein the plurality of fittings are each loosely coupled to adjacent fittings.

10 18. A trampoline according to claim 17 wherein adjacent fittings are coupled by an extending tongue portion of one fitting engaging into a recess in an adjacent fitting.

19. A trampoline including
a flexible mat
15 a plurality of resiliently flexible rods each having a lower end retained in a frame of the trampoline and an enlarged upper end, and
plurality of fittings coupled to the mat about a periphery of the mat and including on or in an underside of each fitting a socket cavity which receives the enlarged upper end of a flexible rod so that the upper ends of the flexible rods are
20 pivotally connected to the periphery of the mat, and wherein the fittings have a wide outer edge adjacent an outer edge of the mat which engages a pocket or pockets about or in the periphery of the mat.

20. A trampoline including a flexible mat, plurality of fittings coupled to the mat
25 about a periphery of the mat, a plurality of resiliently flexible rods each having a lower end retained in a frame of the trampoline and an upper end connected to a said fitting, and or in an underside of each fitting a socket cavity which receives an enlarged upper end of the flexible rod connected to the fitting or a ball shaped portion which is received by a socket cavity on the end of the rod connected to the fitting, so that the upper ends
30 of the flexible rods are pivotally connected to the periphery of the mat.

21. A trampoline according to claim 20 wherein the widest dimension of the fittings is approximately in the plane of the mat and at an outer edge of the fittings closest to an outer peripheral edge to the mat.
- 5 22. A trampoline according to claim 20 or claim 21 wherein the fittings are positioned within a pocket or pockets in the peripheral edge of the mat.

371 ACCEPTANCE LETTER

Date Mailed: 07/22/2008

NOTICE OF ACCEPTANCE OF APPLICATION UNDER 35 U.S.C 371 AND 37 CFR 1.495

The applicant is hereby advised that the United States Patent and Trademark Office in its capacity as a Designated / Elected Office (37 CFR 1.495), has determined that the above identified international application has met the requirements of 35 U.S.C. 371, and is ACCEPTED for national patentability examination in the United States Patent and Trademark Office.

The United States Application Number assigned to the application is shown above and the relevant dates are:

06/20/2007
DATE OF RECEIPT OF 35 U.S.C. 371(c)(1),
(c)(2) and (c)(4) REQUIREMENTS

06/20/2007
DATE OF COMPLETION OF ALL
35 U.S.C. 371 REQUIREMENTS

A Filing Receipt (PTO-103X) will be issued for the present application in due course. **THE DATE APPEARING ON THE FILING RECEIPT AS THE " FILING DATE" IS THE DATE ON WHICH THE LAST OF THE 35 U.S.C. 371 (c)(1), (c)(2) and (c)(4) REQUIREMENTS HAS BEEN RECEIVED IN THE OFFICE. THIS DATE IS SHOWN ABOVE.** The filing date of the above identified application is the international filing date of the international application (Article 11(3) and 35 U.S.C. 363). Once the Filing Receipt has been received, send all correspondence to the Group Art Unit designated thereon.

The following items have been received:

- Indication of Small Entity Status
- Copy of the International Application filed on 06/09/2006
- Copy of the International Search Report filed on 06/09/2006
- Preliminary Amendments filed on 06/20/2007
- Information Disclosure Statements filed on 06/20/2007
- Oath or Declaration filed on 06/20/2007
- U.S. Basic National Fees filed on 06/09/2006
- Priority Documents filed on 06/09/2006
- Power of Attorney filed on 06/20/2007

Applicant is reminded that any communications to the United States Patent and Trademark Office must be mailed to the address given in the heading and include the U.S. application no. shown above (37 CFR 1.5)

FILING RECEIPT

Date Mailed: 07/22/2008

Receipt is acknowledged of this non-provisional patent application. The application will be taken up for examination in due course. Applicant will be notified as to the results of the examination. Any correspondence concerning the application must include the following identification information: the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. **If an error is noted on this Filing Receipt, please submit a written request for a Filing Receipt Correction. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the USPTO processes the reply to the Notice, the USPTO will generate another Filing Receipt incorporating the requested corrections**

PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process **simplifies** the filing of patent applications on the same invention in member countries, but **does not result** in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at <http://www.uspto.gov/web/offices/pac/doc/general/index.html>.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, <http://www.stopfakes.gov>. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4158).

LICENSE FOR FOREIGN FILING UNDER**Title 35, United States Code, Section 184****Title 37, Code of Federal Regulations, 5.11 & 5.15****GRANTED**

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as

set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it contains a valid OMB control number.

WARNING: Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form PTO-2038 submitted for payment purposes) is never required by the USPTO to support a petition or an application. If this type of personal information is included in documents submitted to the USPTO, petitioners/applicants should consider redacting such personal information from the documents before submitting them to the USPTO. Petitioner/applicant is advised that the record of a patent application is available to the public after publication of the application (unless a non-publication request in compliance with 37 CFR 1.213(a) is made in the application) or issuance of a patent. Furthermore, the record from an abandoned application may also be available to the public if the application is referenced in a published application or an issued patent (see 37 CFR 1.14). Checks and credit card authorization forms PTO-2038 submitted for payment purposes are not retained in the application file and therefore are not publicly available.				
I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under 18 U.S.C. 1001 and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

PRELIMINARY AMENDMENT

As a preliminary matter, please amend the above-identified application as follows:

Amendments to the **Claims** begin at **page 2**.

The **Remarks** concerning the Preliminary Amendment begin at **page 6**.

1.(original) A trampoline and enclosure system comprising:
a trampoline comprising a flexible mat and a plurality of springs holding the mat in tension within a peripheral frame of the trampoline which surrounds the mat; and
an enclosure system comprising a barrier of a flexible material surrounding the mat above the mat and having a lower peripheral part coupled directly or indirectly to the mat and a plurality of resiliently flexible generally upright enclosure support members outside of the barrier relative to the mat and which are connected at or towards the lower ends of the enclosure support members to the frame of the trampoline and at or towards their upper ends to the barrier at or near an upper peripheral part of the barrier to support the barrier above the mat, and which are free to resiliently deform away from the mat when impacted by a user against the barrier or an enclosure support member, and which are also connected together at or towards the upper ends of the enclosure support members to draw and pre-tension the upper ends of the enclosure support members away from their natural rest state (when connected only at their lower ends to the frame of the trampoline) and towards the centre of the mat.

2.(original) A trampoline and enclosure system according to claim 1, wherein said barrier comprises a flexible net material.

3.(currently amended) A trampoline and enclosure system according to ~~either of claims 1 or 2~~ claim 1 wherein the enclosure support members hold the barrier in tension.

4.(currently amended) A trampoline and enclosure system according to ~~any one of claims 1 to 3~~, claim 1 wherein the enclosure support members are pultruded fibreglass rods.

5.(currently amended) A trampoline and enclosure system according to ~~any one of claims 1 to 4~~ claim 1 wherein the enclosure support members are connected together at or towards their upper ends by an upper peripheral part of the barrier.

6.(currently amended) A trampoline and enclosure system according to ~~any one of claims 1 to 4~~ claim 1 wherein the enclosure support members are connected together at or towards their upper ends by a flexible connecting element.

7.(original) A trampoline and enclosure system according to claim 6 wherein said flexible connecting element is fixed to or integral with the barrier at or towards an upper peripheral part of the barrier.

8.(currently amended) A trampoline and enclosure system according to ~~any one of claims 1 to 7~~, claim 1 wherein the enclosure support members are connected to the frame of the trampoline below the surface of the mat.

9.(original) A trampoline and enclosure system comprising:
a trampoline comprising a flexible mat and a plurality of coil springs holding the mat in tension within a peripheral frame of the trampoline which surrounds the mat; and
an enclosure system comprising a barrier of a flexible net material surrounding the mat above the mat and having a lower peripheral part coupled directly or indirectly to a periphery of the mat and a plurality of resiliently flexible generally upright enclosure support members outside of the barrier relative to the mat and which are connected at or towards the lower ends of the enclosure support members to the frame of the trampoline so that in their natural rest state

(when connected only at the lower ends to the frame of the trampoline) the enclosure support members extend away from the mat, and which are connected to the barrier net only at or near an upper peripheral part of the barrier to hold the net in tension above the mat, and which enclosure support members are also connected together at or towards the upper ends of the enclosure support member to draw the upper ends of the enclosure support members away from their natural rest state (when connected only at their lower ends to the frame of the trampoline) and towards the centre of the mat, so that when impacted by a user against the barrier on one side of the enclosure causing the barrier and enclosure support member on that side of the enclosure to resiliently deform away from the mat, the enclosure support members and barrier on the opposite side of the enclosure will be resiliently deformed towards the centre of the mat.

10.(original) A trampoline and enclosure system according to claim 10, wherein the enclosure support members are pultruded fibreglass rods.

11.(original) A trampoline and enclosure system comprising:

a trampoline comprising a flexible mat and a plurality of coil springs holding the mat in tension within a peripheral frame of the trampoline which surrounds the mat; and

an enclosure system comprising a barrier of a flexible net material surrounding the mat above the mat and having a lower peripheral part coupled directly or indirectly to a periphery of the mat and a plurality of resiliently flexible generally upright enclosure support members outside of the barrier relative to the mat and which are connected at or towards the lower ends of the enclosure support members to the frame of the trampoline and which are connected to the barrier net only at or near an upper peripheral part of the barrier to hold the net in tension above the mat, and which enclosure support members are also connected together at or towards the

REMARKS

No new matter has been introduced into this application by reason of the amendments presented hereinabove. The amendments to the claims are to conform the claims to the requirements of 37 CFR 1.75(c) and to accepted claim formats. There is no intention to limit the scope of the amended claims either expressed or implied by the amendments.

It is respectfully requested that the foregoing amendments to the Claims be entered prior to the first official action on this application.

Respectfully submitted,

INFORMATION DISCLOSURE STATEMENT

In compliance with the Duty of Disclosure set forth in 37 C.F.R. §1.56, Applicant is submitting herewith Form PTO/SB/08A with this statement.

Please note that this application is the U.S. national phase of International Patent Application No. PCT/NZ2004/000318, filed December 9, 2004. An International Search Report was established for this international application and a copy of the International Search Report was transmitted to the U.S. Patent and Trademark Office by the International Bureau. The International Search Report was received by the U.S. Patent and Trademark Office as indicated on Form PTO/DO/EO/905 mailed on February 20, 2007.

This submission is being made in accordance with 37 C.F.R. §1.97 and is believed to be in full compliance with the requirements of 37 C.F.R. §1.98.

Applicants respectfully request full and proper consideration of the listed information during examination of the application, and that the listed information be printed on any patent which issues therefrom.

Respectfully submitted,

DANN, DORFMAN, HERRELL AND SKILLMAN

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

NOTIFICATION OF MISSING REQUIREMENTS UNDER 35 U.S.C. 371 IN THE UNITED STATES DESIGNATED/ELECTED OFFICE (DO/EO/US)

The following items have been submitted by the applicant or the IB to the United States Patent and Trademark Office as a Designated / Elected Office (37 CFR 1.495).

- Indication of Small Entity Status
- Copy of the International Application filed on 06/09/2006
- Copy of the International Search Report filed on 06/09/2006
- U.S. Basic National Fees filed on 06/09/2006
- Priority Documents filed on 06/09/2006

The applicant needs to satisfy supplemental fees problems indicated below.

The following items **MUST** be furnished within the period set forth below in order to complete the requirements for acceptance under 35 U.S.C. 371:

- Additional claim fees of **\$180** as a small entity, including any required multiple dependent claim fee, are required. Applicant must submit the additional claim fees or cancel the additional claims for which fees are due.
- Oath or declaration of the inventors, in compliance with 37 CFR 1.497(a) and (b), identifying the application by the International application number and international filing date.
- To avoid abandonment, a surcharge (for late submission of filing fee, search fee, examination fee or oath or declaration) as set forth in 37 CFR 1.492(h) of \$65 for a small entity in compliance with 37 CFR 1.27, must be submitted with the missing items identified in this letter.

SUMMARY OF FEES DUE:

Total additional fees required for this application is **\$245** for a Small Entity:

- \$65 Surcharge.
- Total additional claim fee(s) for this application is \$ 180
 - \$180 for multiple dependent claim surcharge.

ALL OF THE ITEMS SET FORTH ABOVE MUST BE SUBMITTED WITHIN TWO (2) MONTHS FROM THE DATE OF THIS NOTICE OR BY 32 MONTHS FROM THE PRIORITY DATE FOR THE APPLICATION, WHICHEVER IS LATER. FAILURE TO PROPERLY RESPOND WILL RESULT IN ABANDONMENT.

The time period set above may be extended by filing a petition and fee for extension of time under the provisions of 37 CFR 1.136(a).

Applicant is reminded that any communications to the United States Patent and Trademark Office must be mailed to the address given in the heading and include the U.S. application no. shown above (37 CFR 1.5)

DESIGNATED/ELECTED OFFICE (DO/EO/US)**

Attention: PCT International Division

We are enclosing the following for the above-identified international application:

- 1) Transmittal Letter to United States Designated/Elected Office (DO/EO/US) Concerning a Filing Under 35 U.S.C. 371 (**FIRST** submission): Form PTO-1390;
- 2) Check in the amount of \$450.00: (small entity): basic national fee (\$150); examination fee (\$100); and search fee (\$200).

A TRAMPOLINE AND ENCLOSURE SYSTEM

AP12 Rec'd PCT/PTO 09 JUN 2006

FIELD OF THE INVENTION

- 5 The present invention relates to an improved trampoline and enclosure system.

BACKGROUND TO THE INVENTION

- 10 US patent 6,053,845 describes an enclosure for a trampoline consisting of a net fence or barrier which surrounds the trampoline and is supported by upright poles spaced around the periphery of the trampoline and fixed to the trampoline frame.

- 15 US patent 6,319,174 discloses a form of soft-edged trampoline in which the mat of the trampoline is supported by a plurality of resiliently flexible rods received in a frame of the trampoline at the lower ends of the rods and coupled to the periphery of the bouncing mat of the trampoline at their upper ends, and which avoids the need for a solid frame about the exterior of the bouncing mat and exposed springs between the frame and periphery of the mat.

20 **SUMMARY OF THE INVENTION**

It is an object of the invention to provide an improved or at least alternative trampoline enclosure, for a spring-based trampoline.

- 25 In one aspect the invention may be said to comprise a trampoline and enclosure system comprising:

- 30 a trampoline comprising a flexible mat and a plurality of springs holding the mat in tension within a peripheral frame of the trampoline which surrounds the mat; and
an enclosure system comprising a barrier of a flexible material surrounding the mat above the mat and having a lower peripheral part coupled directly or indirectly to the mat and a plurality of resiliently flexible generally upright enclosure support

members outside of the barrier relative to the mat and which are connected at or towards the lower ends of the enclosure support members to the frame of the trampoline and at or towards their upper ends to the barrier at or near an upper peripheral part of the barrier to support the barrier above the mat, and which are free to resiliently deform away from the mat when impacted by a user against the barrier or an enclosure support member, and which are also connected together at or towards the upper ends of the enclosure support members to draw and pre-tension the upper ends of the enclosure support members away from their natural rest state (when connected only at their lower ends to the frame of the trampoline) and towards the centre of the mat.

Typically the barrier comprises a flexible net material and the enclosure support members are resiliently flexible pultruded fibreglass rods.

In broad terms in another aspect the invention may be said to comprise a trampoline and enclosure system including:

a trampoline comprising a flexible mat and a plurality of coil springs holding the mat in tension within a peripheral frame of the trampoline which surrounds the mat; and

an enclosure system comprising a barrier of a flexible net material surrounding the mat above the mat and having a lower peripheral part coupled directly or indirectly to a periphery of the mat and a plurality of resiliently flexible generally upright enclosure support members outside of the barrier relative to the mat and which are connected at or towards the lower ends of the enclosure support members to the frame of the trampoline so that in their natural rest state (when connected only at the lower ends to the frame of the trampoline) the enclosure support members extend away from the mat, and which are connected to the barrier net only at or near an upper peripheral part of the barrier to hold the net in tension above the mat, and which enclosure support members are also connected together at or towards the upper ends of the enclosure support members to draw the upper ends of the enclosure support members away from their natural rest state (when connected only at their lower ends to the frame of the trampoline) and towards the centre of the mat, so that when impacted by a user against

the barrier on one side of the enclosure causing the barrier and enclosure support member on that side of the enclosure to resiliently deform away from the mat, the enclosure support members and barrier on the opposite side of the enclosure will be resiliently deformed towards the centre of the mat.

5

1. In broad terms in a further aspect the invention comprises a trampoline and enclosure system comprising:

a trampoline comprising a flexible mat and a plurality of coil springs holding the mat in tension within a peripheral frame of the trampoline which surrounds the mat;

10 and

an enclosure system comprising a barrier of a flexible net material surrounding the mat above the mat and having a lower peripheral part coupled directly or indirectly to a periphery of the mat and a plurality of resiliently flexible generally upright enclosure support members outside of the barrier relative to the mat and which are connected at or towards the lower ends of the enclosure support members to the frame of the trampoline and which are connected to the barrier net only at or near an upper peripheral part of the barrier to hold the net in tension above the mat, and which enclosure support members are also connected together at or towards the upper ends of the enclosure support members to draw the upper ends of the enclosure support members away from their natural rest state (when connected only at their lower ends to the frame of the trampoline) and towards the centre of the mat, so that when impacted by a user against the barrier on one side of the enclosure causing the barrier and enclosure support member on that side of the enclosure to resiliently deform away from the mat, the enclosure support members and barrier on the opposite side of the enclosure will be resiliently deformed towards the centre of the mat.

25

In this specification (including claims) the term "trampoline" is intended to extend to smaller trampolines commonly referred to as rebounders also, as well as larger trampolines of all sizes. Trampolines of the invention may be circular, square, rectangular, or of other shapes such as octagonally shaped in plan view for example.

30

The term 'comprising' as used in this specification and claims means 'consisting at least in part of', that is to say when interpreting independent claims including that term, the features prefaced by that term in each claim all need to be present but other features can also be present

5

BRIEF DESCRIPTION OF THE DRAWINGS

Preferred embodiments of the invention will be described with reference to the accompanying drawings, of which:

10

Figure 1 is a side view of a trampoline and enclosure system of the invention,

Figure 2 is a view of part of the trampoline frame and of a tubular socket fitting attached thereto mounting the lower end of an enclosure support member,

15

Figure 3 is a closer view of the tubular socket fitting shown in Figure 2,

Figure 4 illustrates the trampoline and enclosure system in use,

20

Figures 5 and 6 show a portion of the upper peripheral edge of the barrier net of the preferred form trampoline and the upper end of an enclosure support rod which engages into a pocket fixed to the upper edge of the barrier net,

25

Figure 7 shows one side of a preferred form trampoline and long pockets fixed to the upper edge of the barrier net and into which the enclosure support rods engage to mount the barrier net to the support rods.

Figure 8 schematically shows a further pocket system for mounting the upper peripheral edge of the barrier net to the upper ends of the enclosure support rods.

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENTS

Referring to Figures 1 to 3 the trampoline shown comprises a peripheral frame 1 supported by legs 2. The frame in the form shown is circular and is typically formed of steel or aluminium for example. A flexible mat 3 on which users may bounce is held in tension within the frame 1 by springs 4 which are connected between the edge of the mat and the peripheral frame to hold the mat in tension. Typically the springs are coil springs the wire ends of which are formed into hooks so that one end of each spring hook-engages the edge of the trampoline mat while the other end of each spring hooks into a hole in the circular trampoline frame. The trampoline shown is circular in shape but the trampoline could be of any other desired shape such as oval, square, rectangular or similar.

The trampoline also comprises an enclosure system as shown. The enclosure system consists of a plurality of resiliently deformable generally upright enclosure support members 5 which in the preferred form are deformable or flexible fibreglass rods and may in particular be pultruded fibreglass rods, but may alternatively be spring steel elements for example. Hereinafter the enclosure support members 5 will be referred to as enclosure rods for convenience, but it is to be understood that this term is non-limiting in relation to the size and cross-sectional shape of the enclosure support elements and the material from which they are formed, provided that they provide the required degree of flexibility in accordance with the invention.

The enclosure system also comprises a barrier net 6. The enclosure rods 5 support the net 6 above the mat 3, and the lower edge of the barrier net 6 is coupled directly or indirectly to the peripheral edge of the mat.

The enclosure rods 5 are positioned on the outside of the barrier 6 as shown. The enclosure rods 5 are coupled to the trampoline frame at the lower ends of the enclosure rods, and to the upper peripheral part of the net 6 at or towards the upper ends of the enclosure rods.

The barrier 6 is preferably formed of a lightweight but strong net material but may alternatively be a flexible fabric material which is for example opaque or which is perforated so as to be semi-opaque. In the preferred form, as shown in Figure 2 a band
5 7 of a stronger material such as a webbing material for example, is fixed to the lower peripheral edge of the barrier net, and comprises holes through which the hooks on the ends of the springs 4 pass before the hooks also hook into holes about the edge of the mat 3 as referred to previously, so that the lower edge of the barrier net 6 and the edge of the mat 3 are held together. Alternative arrangements are possible for example the
10 lower edge of the barrier net may be stitched or otherwise affixed directly to the periphery of the mat. The net is held in tension between the top of the enclosure rods and the edge of the trampoline mat.

Figures 2 and 3 show how the lower ends of the enclosure rods 5 may be connected to
15 the trampoline frame. A tubular socket 8 is carried by a bracket 9 which includes a U-shaped clamp part 10 which encircles an upright leg part of the trampoline frame and clamps the socket 8 to the frame. The U-shaped bracket may be closed by a bolt and nut 12 for example. A hook part 11 of the bracket extends upwardly and over the trampoline frame 1 as shown to assist in locating the bracket 9 vertically. Any other
20 mechanical equivalent arrangement for holding the lower ends of the closure rods at an angle may be utilised. Also it is not necessary that a bracket 9 or equivalent is provided only at each trampoline leg 2. Alternatively a bracket could clamp to the frame 1 between legs 2 or tubular holders 8 or equivalent could be fixed by welding for example to the lower external part of the frame member 1.

25 The sockets 8 or equivalent are oriented so that the enclosure rods are preferably retained by the trampoline frame at their lower ends so that in the natural rest state of the enclosure rods, when connected only at their lower ends to the frame of the trampoline and before fitting of the barrier net, the enclosure rods will extend at an
30 angle away from the mat of the trampoline as shown. Thus, when the net is fitted to connect the upper ends of the enclosure rods, or some other flexible connecting element which connects the upper ends of the enclosure rods is fitted, this will draw the upper

ends of the enclosure rods away from their natural state of rest and towards the centre of the mat, to the position generally as shown in Figure 1, to pre-tension the enclosure rods. The enclosure support rods act like fishing rods, and are set to hold up and tension the enclosure net adequately for the play or safety function. The higher is such pre-tension in the support rods the stronger rebound capability the enclosure net has. In addition it may not be essential that the enclosure rods are mounted so that they extend in a vertical plane. Alternatively the enclosure rods may extend to one side or the other, in a plane at an angle to the vertical and/or horizontal.

10 In a most simple form the upper ends of all of the enclosure rods 5 may be connected by a line. In the preferred form shown a band 15 such as a webbing strap fixed for example by sewing to the upper peripheral edge of the barrier net 6 couples the upper ends of all of the enclosure rods 5. The rods are coupled so that they are bowed or drawn away from their natural state of rest (when connected only at their lower ends to the frame of the trampoline) and towards the centre of the mat. In an alternative form a line or band may couple the enclosure rods at or towards their upper ends, which is a separate component from the net itself. Such a separate band or line may incorporate a buckle or adjustable connector which allows for adjustment of the length of the band or line to enable the degree of pre-tension applied to the enclosure rods 5 to be varied, thus varying the strength of rebound that will be provided. Because the enclosure rods are coupled to the trampoline and mat only at or towards their lower ends they are free to move relative to the mat as shown in Figure 4. The enclosure rods are highly flexible or deformable. The degree of resilience may be such that an average size or weight user (for example a 80 kg user) deforming the enclosure to the extent shown in Figure 4 or to a greater extent will be rebounded back onto the mat.

Typically the trampoline will be delivered to a purchaser in disassembled form. The enclosure may be supplied together with the trampoline or separately, and may be factory fitted, or retrospectively self-fitted by a user. It may come in component form as a kit, or preassembled for attachment to the trampoline. This provides an enclosure that is specifically designed to function as a play and safety addition to a trampoline.

The resulting enclosure system has a high degree of flexibility or deformability. This is illustrated in Figure 4, which shows a user impacting against the barrier net 6 and one enclosure rod 5, and it can be seen that the enclosure rod freely deforms away from the trampoline. At the same time the lower edge of the net remains coupled to the trampoline mat. Typically when an average sized or weight user hits the enclosure so that the enclosure deforms to this extent or more, the impact energy absorbed by the enclosure will gently rebound the user back onto the trampoline mat. The upper ends of all of the enclosure rods are connected together so that all of the enclosure rods and net form a dynamic rebound surface. That is, a user impacting any side of the enclosure will cause all of the rods to deform to some extent. The enclosure is such that when the enclosure is impacted by a user on one side causing the barrier on that side of the enclosure to deform away from the mat as shown in Figure 4 for example or more, the enclosure support members and barrier on the opposite side of the enclosure will be deformed inwardly towards the centre of the mat. Also, the enclosure rods 5 are outside and thus removed from the direct area of play, are deformable and mounted by their lower ends only so as to not cause injury when they are hit from the side and, unlikely to cause injury if landed on from above, but provide enough tension to the net to give the required rebounding response to a jumper hitting it.

Referring to Figures 5 and 6, the enclosure net may be supported at its upper periphery by pockets 17 provided at or near an upper periphery of the enclosure net, which will fit over the upper ends of the enclosure rods 15 as shown. The pockets 17 may be stitched or otherwise fixed to the enclosure net and/or band 15 around the top of the enclosure. As shown in Figure 7 the pocket 17 may be coupled to the barrier net 6 only at or adjacent the upper peripheral edge of the net. Optionally the pockets 17 may be lined with or formed of a compressible material such as synthetic foam or foam rubber material to further reduce the risk of any injury on impact with the enclosure rod by a jumper. Longer pockets the full length of the rods and preferably attaching at the bottom to the sockets 8 (as shown in Figure 7) reduce any risk of the pockets separating from the enclosure rods during active bouncing on the trampoline and against the barrier net. The risk of a bystander such as a child pulling an enclosure rod from the pocket is also reduced.

Figure 8 shows an alternative arrangement in which again a pocket 17 is provided at the upper periphery of the enclosure net for each enclosure rod 5. In this embodiment the pocket 17 is a shorter length pocket as shown. Safety loops 18 typically formed of a webbing material are provided through which the upper end of the enclosure rod 5 passes, which take the approximately lateral load between the upper end of the enclosure rod and the barrier net, one safety loop 18 within the pocket and the other below the pocket as shown. Thus the contact point between the top of the pocket 17 and the upper end of the rod enclosure 5 carries only approximately vertical force. Preferably the upper end of the enclosure rod 5 in this and other embodiments is enlarged as shown for example by fitting of a ball shaped end 19 to the rod end. The webbing loops 18 act to prevent the rod 5 with its attached ball 19 from being pulled downwards when the net 6 is tight, so preventing the rods 5 from being pulled inadvertently from the pocket 17 once the net 6 is assembled.

Preferably as also shown in Figure 7, the barrier net incorporates an integral door 20 as a flap sewn into the net. A hook and loop fastening material such as VELCRO is used between the edges of the door and the aperture through the barrier net as at 21. Alternatively, zippers may be used, or a combination of a hook and loop material and one or more zippers. The door aperture flap may be in any suitable form such as a square door flap and aperture as shown, or alternatively an inverted T-form with flaps on either side and a centre fastener or similar.

The foregoing describes the invention including preferred forms thereof. Alterations and modifications as will be obvious to those skilled in the art are intended to be incorporated and within the scope thereof as defined in the accompanying claims.

WHAT WE CLAIM IS:

1. A trampoline and enclosure system comprising:
a trampoline comprising a flexible mat and a plurality of springs holding the
5 mat in tension within a peripheral frame of the trampoline which surrounds the mat; and
an enclosure system comprising a barrier of a flexible material surrounding the
mat above the mat and having a lower peripheral part coupled directly or indirectly to
the mat and a plurality of resiliently flexible generally upright enclosure support
members outside of the barrier relative to the mat and which are connected at or towards
10 the lower ends of the enclosure support members to the frame of the trampoline and at
or towards their upper ends to the barrier at or near an upper peripheral part of the
barrier to support the barrier above the mat, and which are free to resiliently deform
away from the mat when impacted by a user against the barrier or an enclosure support
member, and which are also connected together at or towards the upper ends of the
15 enclosure support members to draw and pre-tension the upper ends of the enclosure
support members away from their natural rest state (when connected only at their lower
ends to the frame of the trampoline) and towards the centre of the mat.
2. A trampoline and enclosure system according to claim 1, wherein said barrier
20 comprises a flexible net material.
3. A trampoline and enclosure system according to either of claims 1 or 2 wherein
the enclosure support members hold the barrier in tension.
- 25 4. A trampoline and enclosure system according to any one of claims 1 to 3,
wherein the enclosure support members are pultruded fibreglass rods.
5. A trampoline and enclosure system according to any one of claims 1 to 4
wherein the enclosure support members are connected together at or towards their upper
30 ends by an upper peripheral part of the barrier.

6. A trampoline and enclosure system according to any one of claims 1 to 4 wherein the enclosure support members are connected together at or towards their upper ends by a flexible connecting element

5 7. A trampoline and enclosure system according to claim 6 wherein said flexible connecting element is fixed to or integral with the barrier at or towards an upper peripheral part of the barrier.

8. A trampoline and enclosure system according to any one of claims 1 to 7,
10 wherein the enclosure support members are connected to the frame of the trampoline below the surface of the mat.

9. A trampoline and enclosure system comprising:

15 a trampoline comprising a flexible mat and a plurality of coil springs holding the mat in tension within a peripheral frame of the trampoline which surrounds the mat; and

an enclosure system comprising a barrier of a flexible net material surrounding the mat above the mat and having a lower peripheral part coupled directly or indirectly to a periphery of the mat and a plurality of resiliently flexible generally upright enclosure support members outside of the barrier relative to the mat and which are
20 connected at or towards the lower ends of the enclosure support members to the frame of the trampoline so that in their natural rest state (when connected only at the lower ends to the frame of the trampoline) the enclosure support members extend away from the mat, and which are connected to the barrier net only at or near an upper peripheral
25 part of the barrier to hold the net in tension above the mat, and which enclosure support members are also connected together at or towards the upper ends of the enclosure support members to draw the upper ends of the enclosure support members away from their natural rest state (when connected only at their lower ends to the frame of the trampoline) and towards the centre of the mat, so that when impacted by a user against
30 the barrier on one side of the enclosure causing the barrier and enclosure support member on that side of the enclosure to resiliently deform away from the mat, the

enclosure support members and barrier on the opposite side of the enclosure will be resiliently deformed towards the centre of the mat.

10. A trampoline and enclosure system according to claim 10, wherein the enclosure support members are pultruded fibreglass rods.

11. A trampoline and enclosure system comprising:

a trampoline comprising a flexible mat and a plurality of coil springs holding the mat in tension within a peripheral frame of the trampoline which surrounds the mat; and

an enclosure system comprising a barrier of a flexible net material surrounding the mat above the mat and having a lower peripheral part coupled directly or indirectly to a periphery of the mat and a plurality of resiliently flexible generally upright enclosure support members outside of the barrier relative to the mat and which are connected at or towards the lower ends of the enclosure support members to the frame of the trampoline and which are connected to the barrier net only at or near an upper peripheral part of the barrier to hold the net in tension above the mat, and which enclosure support members are also connected together at or towards the upper ends of the enclosure support members to draw the upper ends of the enclosure support members away from their natural rest state (when connected only at their lower ends to the frame of the trampoline) and towards the centre of the mat, so that when impacted by a user against the barrier on one side of the enclosure causing the barrier and enclosure support member on that side of the enclosure to resiliently deform away from the mat, the enclosure support members and barrier on the opposite side of the enclosure will be resiliently deformed towards the centre of the mat.

12. A trampoline and enclosure system according to claim 11, wherein the enclosure support members are pultruded fibreglass rods.

(54) Title: A TRAMPOLINE AND ENCLOSURE SYSTEM

(57) Abstract: A trampoline comprising a flexible mat (3) and a plurality of springs (4) holding the mat in tension within a peripheral frame (1) of the trampoline which surrounds the mat has an enclosure system surrounding the mat. The enclosure has a lower peripheral part coupled to the mat and a plurality of resiliently flexible upright enclosure members (5) to support the barrier above the mat. The enclosure support members are free to resiliently deform away from the mat when impacted by a user against the barrier. They are also connected together at the upper ends of the enclosure support members away from their natural rest state and towards the centre of the mat. When impacted by a user against the barrier on the side of the enclosure causing the barrier to resiliently deform away from the mat, the enclosure support members are resiliently deformed towards the centre of the mat.

A TRAMPOLINE AND ENCLOSURE SYSTEM

FIELD OF THE INVENTION

- 5 The present invention relates to an improved trampoline and enclosure system.

BACKGROUND TO THE INVENTION

- 10 US patent 6,053,845 describes an enclosure for a trampoline consisting of a net fence or barrier which surrounds the trampoline and is supported by upright poles spaced around the periphery of the trampoline and fixed to the trampoline frame.

- 15 US patent 6,319,174 discloses a form of soft-edged trampoline in which the mat of the trampoline is supported by a plurality of resiliently flexible rods received in a frame of the trampoline at the lower ends of the rods and coupled to the periphery of the bouncing mat of the trampoline at their upper ends, and which avoids the need for a solid frame about the exterior of the bouncing mat and exposed springs between the frame and periphery of the mat.

20 SUMMARY OF THE INVENTION

It is an object of the invention to provide an improved or at least alternative trampoline enclosure, for a spring-based trampoline.

- 25 In one aspect the invention may be said to comprise a trampoline and enclosure system comprising:

- a trampoline comprising a flexible mat and a plurality of springs holding the mat in tension within a peripheral frame of the trampoline which surrounds the mat; and
30 an enclosure system comprising a barrier of a flexible material surrounding the mat above the mat and having a lower peripheral part coupled directly or indirectly to the mat and a plurality of resiliently flexible generally upright enclosure support

members outside of the barrier relative to the mat and which are connected at or towards the lower ends of the enclosure support members to the frame of the trampoline and at or towards their upper ends to the barrier at or near an upper peripheral part of the barrier to support the barrier above the mat, and which are free to resiliently deform away from the mat when impacted by a user against the barrier or an enclosure support member, and which are also connected together at or towards the upper ends of the enclosure support members to draw and pre-tension the upper ends of the enclosure support members away from their natural rest state (when connected only at their lower ends to the frame of the trampoline) and towards the centre of the mat.

10

Typically the barrier comprises a flexible net material and the enclosure support members are resiliently flexible pultruded fibreglass rods.

In broad terms in another aspect the invention may be said to comprise a trampoline and enclosure system including:

15

a trampoline comprising a flexible mat and a plurality of coil springs holding the mat in tension within a peripheral frame of the trampoline which surrounds the mat; and

20

an enclosure system comprising a barrier of a flexible net material surrounding the mat above the mat and having a lower peripheral part coupled directly or indirectly to a periphery of the mat and a plurality of resiliently flexible generally upright enclosure support members outside of the barrier relative to the mat and which are connected at or towards the lower ends of the enclosure support members to the frame of the trampoline so that in their natural rest state (when connected only at the lower ends to the frame of the trampoline) the enclosure support members extend away from the mat, and which are connected to the barrier net only at or near an upper peripheral part of the barrier to hold the net in tension above the mat, and which enclosure support members are also connected together at or towards the upper ends of the enclosure support members to draw the upper ends of the enclosure support members away from their natural rest state (when connected only at their lower ends to the frame of the trampoline) and towards the centre of the mat, so that when impacted by a user against

25

30

the barrier on one side of the enclosure causing the barrier and enclosure support member on that side of the enclosure to resiliently deform away from the mat, the enclosure support members and barrier on the opposite side of the enclosure will be resiliently deformed towards the centre of the mat.

5

1. In broad terms in a further aspect the invention comprises a trampoline and enclosure system comprising:

a trampoline comprising a flexible mat and a plurality of coil springs holding the mat in tension within a peripheral frame of the trampoline which surrounds the mat;

10 and

an enclosure system comprising a barrier of a flexible net material surrounding the mat above the mat and having a lower peripheral part coupled directly or indirectly to a periphery of the mat and a plurality of resiliently flexible generally upright enclosure support members outside of the barrier relative to the mat and which are connected at or towards the lower ends of the enclosure support members to the frame of the trampoline and which are connected to the barrier net only at or near an upper peripheral part of the barrier to hold the net in tension above the mat, and which enclosure support members are also connected together at or towards the upper ends of the enclosure support members to draw the upper ends of the enclosure support members away from their natural rest state (when connected only at their lower ends to the frame of the trampoline) and towards the centre of the mat, so that when impacted by a user against the barrier on one side of the enclosure causing the barrier and enclosure support member on that side of the enclosure to resiliently deform away from the mat, the enclosure support members and barrier on the opposite side of the enclosure will be resiliently deformed towards the centre of the mat.

25

In this specification (including claims) the term "trampoline" is intended to extend to smaller trampolines commonly referred to as rebounders also, as well as larger trampolines of all sizes. Trampolines of the invention may be circular, square, rectangular, or of other shapes such as octagonally shaped in plan view for example.

30

The term 'comprising' as used in this specification and claims means 'consisting at least in part of', that is to say when interpreting independent claims including that term, the features prefaced by that term in each claim all need to be present but other features can also be present

5

BRIEF DESCRIPTION OF THE DRAWINGS

Preferred embodiments of the invention will be described with reference to the accompanying drawings, of which:

10

Figure 1 is a side view of a trampoline and enclosure system of the invention,

Figure 2 is a view of part of the trampoline frame and of a tubular socket fitting attached thereto mounting the lower end of an enclosure support member,

15

Figure 3 is a closer view of the tubular socket fitting shown in Figure 2,

Figure 4 illustrates the trampoline and enclosure system in use,

20

Figures 5 and 6 show a portion of the upper peripheral edge of the barrier net of the preferred form trampoline and the upper end of an enclosure support rod which engages into a pocket fixed to the upper edge of the barrier net,

25

Figure 7 shows one side of a preferred form trampoline and long pockets fixed to the upper edge of the barrier net and into which the enclosure support rods engage to mount the barrier net to the support rods.

Figure 8 schematically shows a further pocket system for mounting the upper peripheral edge of the barrier net to the upper ends of the enclosure support rods.

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENTS

- Referring to Figures 1 to 3 the trampoline shown comprises a peripheral frame 1 supported by legs 2. The frame in the form shown is circular and is typically formed of steel or aluminium for example. A flexible mat 3 on which users may bounce is held in tension within the frame 1 by springs 4 which are connected between the edge of the mat and the peripheral frame to hold the mat in tension. Typically the springs are coil springs the wire ends of which are formed into hooks so that one end of each spring hook-engages the edge of the trampoline mat while the other end of each spring hooks into a hole in the circular trampoline frame. The trampoline shown is circular in shape but the trampoline could be of any other desired shape such as oval, square, rectangular or similar.
- The trampoline also comprises an enclosure system as shown. The enclosure system consists of a plurality of resiliently deformable generally upright enclosure support members 5 which in the preferred form are deformable or flexible fibreglass rods and may in particular be pultruded fibreglass rods, but may alternatively be spring steel elements for example. Hereinafter the enclosure support members 5 will be referred to as enclosure rods for convenience, but it is to be understood that this term is non-limiting in relation to the size and cross-sectional shape of the enclosure support elements and the material from which they are formed, provided that they provide the required degree of flexibility in accordance with the invention.
- The enclosure system also comprises a barrier net 6. The enclosure rods 5 support the net 6 above the mat 3, and the lower edge of the barrier net 6 is coupled directly or indirectly to the peripheral edge of the mat.
- The enclosure rods 5 are positioned on the outside of the barrier 6 as shown. The enclosure rods 5 are coupled to the trampoline frame at the lower ends of the enclosure rods, and to the upper peripheral part of the net 6 at or towards the upper ends of the enclosure rods.

The barrier 6 is preferably formed of a lightweight but strong net material but may alternatively be a flexible fabric material which is for example opaque or which is perforated so as to be semi-opaque. In the preferred form, as shown in Figure 2 a band
5 7 of a stronger material such as a webbing material for example, is fixed to the lower peripheral edge of the barrier net, and comprises holes through which the hooks on the ends of the springs 4 pass before the hooks also hook into holes about the edge of the mat 3 as referred to previously, so that the lower edge of the barrier net 6 and the edge of the mat 3 are held together. Alternative arrangements are possible for example the
10 lower edge of the barrier net may be stitched or otherwise affixed directly to the periphery of the mat. The net is held in tension between the top of the enclosure rods and the edge of the trampoline mat.

Figures 2 and 3 show how the lower ends of the enclosure rods 5 may be connected to
15 the trampoline frame. A tubular socket 8 is carried by a bracket 9 which includes a U-shaped clamp part 10 which encircles an upright leg part of the trampoline frame and clamps the socket 8 to the frame. The U-shaped bracket may be closed by a bolt and nut 12 for example. A hook part 11 of the bracket extends upwardly and over the trampoline frame 1 as shown to assist in locating the bracket 9 vertically. Any other
20 mechanical equivalent arrangement for holding the lower ends of the closure rods at an angle may be utilised. Also it is not necessary that a bracket 9 or equivalent is provided only at each trampoline leg 2. Alternatively a bracket could clamp to the frame 1 between legs 2 or tubular holders 8 or equivalent could be fixed by welding for example to the lower external part of the frame member 1.

25 The sockets 8 or equivalent are oriented so that the enclosure rods are preferably retained by the trampoline frame at their lower ends so that in the natural rest state of the enclosure rods, when connected only at their lower ends to the frame of the trampoline and before fitting of the barrier net, the enclosure rods will extend at an
30 angle away from the mat of the trampoline as shown. Thus, when the net is fitted to connect the upper ends of the enclosure rods, or some other flexible connecting element which connects the upper ends of the enclosure rods is fitted, this will draw the upper

- ends of the enclosure rods away from their natural state of rest and towards the centre of the mat, to the position generally as shown in Figure 1, to pre-tension the enclosure rods. The enclosure support rods act like fishing rods, and are set to hold up and tension the enclosure net adequately for the play or safety function. The higher is such pre-tension in the support rods the stronger rebound capability the enclosure net has. In addition it may not be essential that the enclosure rods are mounted so that they extend in a vertical plane. Alternatively the enclosure rods may extend to one side or the other, in a plane at an angle to the vertical and/or horizontal.
- 10 In a most simple form the upper ends of all of the enclosure rods 5 may be connected by a line. In the preferred form shown a band 15 such as a webbing strap fixed for example by sewing to the upper peripheral edge of the barrier net 6 couples the upper ends of all of the enclosure rods 5. The rods are coupled so that they are bowed or drawn away from their natural state of rest (when connected only at their lower ends to the frame of the trampoline) and towards the centre of the mat. In an alternative form a line or band may couple the enclosure rods at or towards their upper ends, which is a separate component from the net itself. Such a separate band or line may incorporate a buckle or adjustable connector which allows for adjustment of the length of the band or line to enable the degree of pre-tension applied to the enclosure rods 5 to be varied, thus varying the strength of rebound that will be provided. Because the enclosure rods are coupled to the trampoline and mat only at or towards their lower ends they are free to move relative to the mat as shown in Figure 4. The enclosure rods are highly flexible or deformable. The degree of resilience may be such that an average size or weight user (for example a 80 kg user) deforming the enclosure to the extent shown in Figure 4 or to a greater extent will be rebounded back onto the mat.
- 15
20
25

Typically the trampoline will be delivered to a purchaser in disassembled form. The enclosure may be supplied together with the trampoline or separately, and may be factory fitted, or retrospectively self-fitted by a user. It may come in component form as a kit, or preassembled for attachment to the trampoline. This provides an enclosure that is specifically designed to function as a play and safety addition to a trampoline.

30

The resulting enclosure system has a high degree of flexibility or deformability. This is illustrated in Figure 4, which shows a user impacting against the barrier net 6 and one enclosure rod 5, and it can be seen that the enclosure rod freely deforms away from the trampoline. At the same time the lower edge of the net remains coupled to the trampoline mat. Typically when an average sized or weight user hits the enclosure so that the enclosure deforms to this extent or more, the impact energy absorbed by the enclosure will gently rebound the user back onto the trampoline mat. The upper ends of all of the enclosure rods are connected together so that all of the enclosure rods and net form a dynamic rebound surface. That is, a user impacting any side of the enclosure will cause all of the rods to deform to some extent. The enclosure is such that when the enclosure is impacted by a user on one side causing the barrier on that side of the enclosure to deform away from the mat as shown in Figure 4 for example or more, the enclosure support members and barrier on the opposite side of the enclosure will be deformed inwardly towards the centre of the mat. Also, the enclosure rods 5 are outside and thus removed from the direct area of play, are deformable and mounted by their lower ends only so as to not cause injury when they are hit from the side and unlikely to cause injury if landed on from above, but provide enough tension to the net to give the required rebounding response to a jumper hitting it.

Referring to Figures 5 and 6, the enclosure net may be supported at its upper periphery by pockets 17 provided at or near an upper periphery of the enclosure net, which will fit over the upper ends of the enclosure rods 15 as shown. The pockets 17 may be stitched or otherwise fixed to the enclosure net and/or band 15 around the top of the enclosure. As shown in Figure 7 the pocket 17 may be coupled to the barrier net 6 only at or adjacent the upper peripheral edge of the net. Optionally the pockets 17 may be lined with or formed of a compressible material such as synthetic foam or foam rubber material to further reduce the risk of any injury on impact with the enclosure rod by a jumper. Longer pockets the full length of the rods and preferably attaching at the bottom to the sockets 8 (as shown in Figure 7) reduce any risk of the pockets separating from the enclosure rods during active bouncing on the trampoline and against the barrier net. The risk of a bystander such as a child pulling an enclosure rod from the pocket is also reduced.

Figure 8 shows an alternative arrangement in which again a pocket 17 is provided at the upper periphery of the enclosure net for each enclosure rod 5. In this embodiment the pocket 17 is a shorter length pocket as shown. Safety loops 18 typically formed of a webbing material are provided through which the upper end of the enclosure rod 5 passes, which take the approximately lateral load between the upper end of the enclosure rod and the barrier net, one safety loop 18 within the pocket and the other below the pocket as shown. Thus the contact point between the top of the pocket 17 and the upper end of the rod enclosure 5 carries only approximately vertical force. Preferably the upper end of the enclosure rod 5 in this and other embodiments is enlarged as shown for example by fitting of a ball shaped end 19 to the rod end. The webbing loops 18 act to prevent the rod 5 with its attached ball 19 from being pulled downwards when the net 6 is tight, so preventing the rods 5 from being pulled inadvertently from the pocket 17 once the net 6 is assembled.

Preferably as also shown in Figure 7, the barrier net incorporates an integral door 20 as a flap sewn into the net. A hook and loop fastening material such as VELCRO is used between the edges of the door and the aperture through the barrier net as at 21. Alternatively, zippers may be used, or a combination of a hook and loop material and one or more zippers. The door aperture flap may be in any suitable form such as a square door flap and aperture as shown, or alternatively an inverted T-form with flaps on either side and a centre fastener or similar.

The foregoing describes the invention including preferred forms thereof. Alterations and modifications as will be obvious to those skilled in the art are intended to be incorporated and within the scope thereof as defined in the accompanying claims.

WHAT WE CLAIM IS:

1. A trampoline and enclosure system comprising:
a trampoline comprising a flexible mat and a plurality of springs holding the
5 mat in tension within a peripheral frame of the trampoline which surrounds the mat; and
an enclosure system comprising a barrier of a flexible material surrounding the
mat above the mat and having a lower peripheral part coupled directly or indirectly to
the mat and a plurality of resiliently flexible generally upright enclosure support
members outside of the barrier relative to the mat and which are connected at or towards
10 the lower ends of the enclosure support members to the frame of the trampoline and at
or towards their upper ends to the barrier at or near an upper peripheral part of the
barrier to support the barrier above the mat, and which are free to resiliently deform
away from the mat when impacted by a user against the barrier or an enclosure support
member, and which are also connected together at or towards the upper ends of the
15 enclosure support members to draw and pre-tension the upper ends of the enclosure
support members away from their natural rest state (when connected only at their lower
ends to the frame of the trampoline) and towards the centre of the mat.
2. A trampoline and enclosure system according to claim 1, wherein said barrier
20 comprises a flexible net material.
3. A trampoline and enclosure system according to either of claims 1 or 2 wherein
the enclosure support members hold the barrier in tension.
- 25 4. A trampoline and enclosure system according to any one of claims 1 to 3,
wherein the enclosure support members are pultruded fibreglass rods.
5. A trampoline and enclosure system according to any one of claims 1 to 4
wherein the enclosure support members are connected together at or towards their upper
30 ends by an upper peripheral part of the barrier.

6. A trampoline and enclosure system according to any one of claims 1 to 4 wherein the enclosure support members are connected together at or towards their upper ends by a flexible connecting element

5 7. A trampoline and enclosure system according to claim 6 wherein said flexible connecting element is fixed to or integral with the barrier at or towards an upper peripheral part of the barrier.

8. A trampoline and enclosure system according to any one of claims 1 to 7,
10 wherein the enclosure support members are connected to the frame of the trampoline below the surface of the mat.

9. A trampoline and enclosure system comprising:

a trampoline comprising a flexible mat and a plurality of coil springs holding
15 the mat in tension within a peripheral frame of the trampoline which surrounds the mat; and

an enclosure system comprising a barrier of a flexible net material surrounding the mat above the mat and having a lower peripheral part coupled directly or indirectly to a periphery of the mat and a plurality of resiliently flexible generally upright
20 enclosure support members outside of the barrier relative to the mat and which are connected at or towards the lower ends of the enclosure support members to the frame of the trampoline so that in their natural rest state (when connected only at the lower ends to the frame of the trampoline) the enclosure support members extend away from the mat, and which are connected to the barrier net only at or near an upper peripheral
25 part of the barrier to hold the net in tension above the mat, and which enclosure support members are also connected together at or towards the upper ends of the enclosure support members to draw the upper ends of the enclosure support members away from their natural rest state (when connected only at their lower ends to the frame of the trampoline) and towards the centre of the mat, so that when impacted by a user against
30 the barrier on one side of the enclosure causing the barrier and enclosure support member on that side of the enclosure to resiliently deform away from the mat, the

enclosure support members and barrier on the opposite side of the enclosure will be resiliently deformed towards the centre of the mat.

10. A trampoline and enclosure system according to claim 10, wherein the enclosure support members are pultruded fibreglass rods.

11. A trampoline and enclosure system comprising:
a trampoline comprising a flexible mat and a plurality of coil springs holding the mat in tension within a peripheral frame of the trampoline which surrounds the mat;
and

an enclosure system comprising a barrier of a flexible net material surrounding the mat above the mat and having a lower peripheral part coupled directly or indirectly to a periphery of the mat and a plurality of resiliently flexible generally upright enclosure support members outside of the barrier relative to the mat and which are connected at or towards the lower ends of the enclosure support members to the frame of the trampoline and which are connected to the barrier net only at or near an upper peripheral part of the barrier to hold the net in tension above the mat, and which enclosure support members are also connected together at or towards the upper ends of the enclosure support members to draw the upper ends of the enclosure support members away from their natural rest state (when connected only at their lower ends to the frame of the trampoline) and towards the centre of the mat, so that when impacted by a user against the barrier on one side of the enclosure causing the barrier and enclosure support member on that side of the enclosure to resiliently deform away from the mat, the enclosure support members and barrier on the opposite side of the enclosure will be resiliently deformed towards the centre of the mat.

12. A trampoline and enclosure system according to claim 11, wherein the enclosure support members are pultruded fibreglass rods.

(54) Title: A TRAMPOLINE AND ENCLOSURE SYSTEM

(57) Abstract: A trampoline comprising a flexible mat (3) and a plurality of springs (4) holding the mat in tension within a peripheral frame (1) of the trampoline which surrounds the mat has an enclosure system surrounding the mat. The enclosure has a lower peripheral part coupled to the mat and a plurality of resiliently flexible upright enclosure members (5) to support the barrier above the mat. The enclosure support members are free to resiliently deform away from the mat when impacted by a user against the barrier. They are also connected together at the upper ends of the enclosure support members away from their natural rest state and towards the centre of the mat. When impacted by a user against the barrier on the side of the enclosure causing the barrier to resiliently deform away from the mat, the enclosure support members are resiliently deformed towards the centre of the mat.

PROVISIONAL SPECIFICATION

TRAMPOLINE ENCLOSURE

We, BOARD & BATTEN INTERNATIONAL INC., c/- International Management Services Ltd., Harbour Centre 4th Floor, North Church Street, Georgetown, Cayman Islands, do hereby declare this invention to be described in the following statement:

TRAMPOLINE ENCLOSURE

FIELD OF THE INVENTION

The present invention relates to an enclosure for a trampoline that provides a rebounding surface in addition to the trampoline surface.

BACKGROUND TO THE INVENTION

Enclosures have been developed and sold to contribute to the safety of conventional trampolines. Such enclosures for trampolines are shown in Figure 1 and Figure 2. These enclosures are primarily designed as a safety device to prevent users falling from the trampoline. They are not suitable for users to deliberately bounce against them for play purposes. The enclosures are generally fairly rigid in nature, and especially the upright poles 1. Should a user deliberately jump into the enclosure, they could hit a rigid pole 1 and/or the outer horizontal frame that supports the trampoline mat. Both types of contact could result in injury to the user.

SUMMARY OF THE INVENTION

It is an object of the invention to provide a trampoline enclosure that provides a rebounding surface.

In one aspect the present invention may be said to consist in a trampoline enclosure adapted to be installed on a trampoline including: a plurality of resilient rods for attaching to the trampoline, and an enclosure wall for attaching to the rods and to, or in proximity to, the perimeter of the trampoline mat.

Preferably, in one form, the rod is made from pultruded fibreglass.

Preferably, in another form, the curtain is netting.

Preferably, in a further form, the top of the curtain includes pockets for attaching the curtain to the top of the rods. Preferably the rods have ball endings. Preferably, the pockets extend substantially the length of the rods.

In another form, the top of the curtain preferably includes fittings to capture the ball end of the rods. Preferably, the fittings are sewn into the top of the curtain.

In another form, a fitting is provided that preferably can attach or clamp to any point on the top of the curtain to capture the top end of the rods. Preferably, the rods are locked in to the fitting to prevent accidental removal.

In another form, the rods are preferably attached to the trampoline at a location on the frame or the legs of the trampoline. Preferably, the attachment is a socket connection. Preferably the bottom of the curtain has a band with holes or other means for connection of the curtain to the trampoline springs or to the spring attachment fittings on the mat. The enclosure may be supplied in component form as a kit, or preassembled, for attachment to the trampoline.

In another embodiment the present invention may be said to consist in a trampoline with an enclosure, the enclosure including: a plurality of resilient rods attached to the trampoline, and an enclosure wall attached to the rods and to, or in proximity to, the perimeter of the trampoline mat.

Preferably, in one form, the rod is made from pultruded fibreglass.

Preferably, in another form, the curtain is netting.

Preferably, in a further form, the top of the curtain includes pockets for attaching the curtain to the top of the rods. Preferably the rods have ball endings. Preferably, the pockets extend substantially the length of the rods.

In another form, the top of the curtain preferably includes fittings to capture the ball end of the rods. Preferably, the fittings are sewn into the top of the curtain.

In another form, a fitting is provided that preferably can attach or clamp to any point on the top of the curtain to capture the top end of the rods. Preferably, the rods are locked in to the fitting to prevent accidental removal.

In a further form, the rods are preferably attached to the trampoline at a location on the frame or the legs of the trampoline. Preferably, the attachment is a socket connection. Preferably the bottom of the curtain has a band with holes or other means for connection of the curtain to the trampoline springs or to the spring attachment fittings on the mat.

BRIEF DESCRIPTION OF THE DRAWINGS

Preferred embodiments of the invention will be described with reference to the accompanying drawings, of which:

Figures 1 and 2 show conventional enclosures on rectangular and round trampolines,

Figure 3 shows a trampoline without enclosure but with pads covering the frame and springs

Figure 4 shows an enclosure according to one embodiment of the invention installed on a trampoline,

Figures 5, 6 and 7 show attachment brackets for the rod sockets,

Figures 8 and 9 show the attachment of the support rods to the pockets on the curtain,

Figures 10 and 11 show the attachment of the support rods to a cleat in the curtain,

Figure 12 shows a the assembly of long curtain pockets for the support rods (in this case on a soft edged trampoline),

Figure 13 shows the attachment of the curtain at the bottom,

Figure 14 shows a zipped opening in the enclosure wall.

Figure 15 shows the trampoline in use,

Figure 16 shows an example construction of a support rod joiner,

Figure 17 shows a higher placement of the support rod joiner,

Figures 18A and 18B show the affect of using a central joiner, and

Figures 19A and 19B show the affect of placing the support rod joiner higher.

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENTS

The present invention relates to an enclosure for a trampoline. An example a trampoline without an enclosure is shown in Figure 3. It has a steel frame outer edge 4, with multiple springs connected to it tensioning the mat. It has safety pads 2 covering the frame and springs.

The enclosure according an embodiment of the invention is adapted for use with the trampoline in Figure 3 is shown installed on the trampoline in Figure 4. It comprises flexible/resilient poles or rods 3 attached at one end to the trampoline frame 4 that extend vertically. A net curtain 5 or similar is attached to the poles 3 near the top 6 and also near the trampoline mat in a manner to be described with reference to Figures 13 and 14. The enclosure may come supplied with the trampoline, or separately, and may be factory fitted, or retrospectively self fitted. It may come in component form as a kit,

or preassembled for attachment to the trampoline. This provides an enclosure that is specifically designed to function as a play addition to a trampoline, such as that of Figure 3. The particular combination of

- (a) the trampoline with safety pads
- (b) enclosure, and
- (c) supported by flexible/resilient rods is

uniquely suited to the use of the enclosure in trampoline play because a jumper hitting the enclosure wall and falling on the trampoline safety pads is in little danger of injury as the trampoline pads are soft and designed for such an event. Also the flexible rods are both difficult for the jumper to hit and readily move on impact so as not to cause injury.

This is in contrast to conventional trampoline enclosures such as in Figure 1 and 2, which are designed purely for safety. With such a conventional trampoline enclosure, if a jumper impacts a support pole 1 it is relatively rigid. They are therefore not suited to using the enclosure for play, and are designed as safety features.

A possible embodiment of the enclosure also provides an enclosure net 5 with a substantially vertical, robust and resilient impact surface of sufficient strength to bounce a person back on to the trampoline. It also provides flexible support rods 3 (as shown in Figure 4) that

- (a) Are preferably removed from the curtain surface 5 as to be difficult to hit,
- (b) That are so flexible as to not cause injury when they are hit from the side,
- (c) That are so flexible as to not cause injury if landed on from above and
- (d) Provide enough tension to the net to give the required rebounding response to the jumper hitting it.

Mounting methods for the support rods can include socket connections, where the sockets receive the end(s) of the enclosure rod. The position and orientation of the

socket may be, in one embodiment, clamped on to the trampoline frame and leg as shown in Figures 5 & 6. The socket 7 includes a bracket portion for attachment around the leg. The bracket can be attached to the frame 4 using for example a bolt.

Further, in another form, the sockets 7 for the enclosure rods 3 could be made integral with the trampoline frame 4. As shown in Figure 7, the socket 7 is welded directly to the frame. It could alternatively be embedded within the frame. This form allows a simpler production since there is no need for attachment brackets. Also, since the socket 7 is within the frame, the stability and strength of the socket 7 may be improved from the designs in Figures 5 and 6.

To allow the rods 3 to bend under impact, the socket could be set at an angle from vertical. The sockets 7 shown in Figure 5 to 7 show such an angle.

The enclosure also provides the safety function achieved by conventional trampoline enclosures and it may be assembled on a trampoline for that purpose alone.

Further features may be provided for the trampoline enclosure as described above. For example, support rods 3, acting like fishing rods, are set to hold up and tension the upper edge 6 of the enclosure net adequately for the play function. The higher the tension in the support rods 3, the more rebound capability the enclosure net 5 has. In other words, where there is a need to provide a netting 5 with a high rebound capability, highly loaded rods 3, thicker rods 3 or more rods 3 could be employed.

Another optional feature could be providing enough support rods 3 to produce an enclosure that does not intrude over the jumping surface. In Figure 4, eight rods are used to achieve this.

The enclosure net 5 could include inverted pockets 8 in the top edge 6 to engage and retain the tops of the support rods 3, as shown in Figures 8 and 9. The inverted pockets 8 may be sewn onto the top edge of the enclosure net 5, or they may be attached by other means such as ties or Velcro straps. Additionally, support rods 3 could be fitted

with a ball-shaped end 9 to both engage the inverted pocket 8 and prevent the rod 3 from penetrating the net inverted pocket 8, especially on impact, as shown in Figures 8 and 9.

In a further form, the inverted pockets 8 may be replaced with fittings 10 that engage the ball-shape end 9 of the rod 3. An example of the fitting is shown in Figure 10. The fitting 10 could be a cleat that includes a socket cavity to receive the ball-shape end 9 of the rod 3 to form a pivotable connection. To ensure the fitting 10 itself is secured to the net top edge 6, the fitting 10 could be sewn into the net top edge 6. A hole is provided in the net top edge 6 to allow the ball-end 9 of the rod 3 to connect with the fitting 10.

In an optional arrangement, a clip cleat 10 is provided. A cut-away view of the clip cleat 10 is shown in Figure 11. The clip cleat 10 provides a latch-like clip 11 to retain the ball-end 9 in the socket cavity. With this arrangement, the rod 3 will not dislocate out of the cleat even if the trampoline user was to pull on the rod 3. To release the ball-end 9, the user will have to move the clip 11 downward before pulling the rod 3 out. This arrangement thus provides a greater safety feature of preventing accidental dislocation of the support rods 3.

In another optional arrangement, the inverted pocket 8 could be a long pocket 8 hanging from the top edge 6, covering the support rod 3. An example is shown in Figure 12. The advantages of this include additional safety against the rod 3 springing loose from the top edge 6 during an impact, and injuring a bystander: the rod 3 is fully contained in the long pocket 8. If the long pocket 8 is lined with a soft material such as foam, this can reduce any impact injury. Also, the long pocket 8 prevents a bystander from pulling the rod 3 down and out of the top socket, because the pocket has to be pulled at the same time.

Furthermore, the enclosure net 5 may have sewn into the bottom edge a band 12 of plain material with holes for hooking over on the trampoline springs as shown in Figure 13.

The enclosure net may also incorporate a door 14 which may be a flap sewn into the net, hung from its top edge and which seals around its edges with Velcro, or a door made with a zip 15 at the joint in the net as shown in Figure 14.

As previously described in the above preferred embodiments, flexible support rods 3 are used to support the enclosure net 5 to provide both safety and play functions. As shown in Figure 15, the flexible support rods 3 must be long enough to support, with tension, the height of the enclosure net 5. At the same time, the flexible support rods 3 must possess the strength to withstand the forces involved when the enclosure is used. For various reasons, the flexible support rods 3 are not manufactured as a single extruded rod, but are preferably a combination of multiple interjoined flexible support rods.

In one form, two flexible rods combine at substantially the centre point of the enclosure net 5. To ensure the secure coupling of the two flexible rods, a central joiner is provided. Referring to Figure 15, the central joiner is shown as 16.

Figure 16 shows one simple form of the central joiner 16. For a seamless connection, the central joiner 16 is shown to have substantially the same cross-sectional dimension as the flexible rods. On each end of the central joiner 16, a hollow passage 17 is provided. The passage 17 will receive an equivalently dimensioned protrusion 18 on the flexible rods. The protrusion 18 of the flexible rod could be attained by machining (e.g. using a lathe) the flexible rod end. Alternatively, the protrusion 18 could be formed during the extrusion of the flexible rods.

In an alternative form of the flexible support rod 3, the joiner for the individual flexible rods could be set higher along the length of the flexible support rod 3. An illustration of this form is shown in Figure 17. Shown as joiners 19, the relative difference in position when compared to the central joiners 16 is apparent.

The reasons for this alternative arrangement of the joiners 19 are to:

- (a) move the joiner away from a point where a jumper could hit it.
- (b) reduce the stress on the joiner.

(c) use more convenient lengths of rod.

In a highly preferred embodiment, a long pocket 8, illustrated in Figure 12, receives the assembled support rods 3, such that the central joiner 16 or the joiner 19 is substantially covered by the long pocket 8. This prevents the support rods 3 from escaping from the central joiner 16 or joiner 19 and prevents the joiner becoming a projectile if the support rods 3 are pulled apart.

* If the entry in column 1 is less than the entry in column 2, write "0" in column 3.

** If the "Highest Number Previously Paid For" IN THIS SPACE is less than '20', enter "20".

*** If the "Highest Number Previously Paid For" IN THIS SPACE is less than '3', enter "3".

The "Highest Number Previously Paid For" (Total or Independent) is the highest number found in the appropriate box in column 1.
