PAUL BACA PROFESSIONAL COURT REPORTERS
500 4th Street, NW, Suite 105, Albuquerque, NM 87102
(505) 843-9241

1 improved premises monitoring system that allows users
2 to monitor realtime conditions in a premises
3 provoking. And this patent, particularly through a
4 graphical interface that is map based and has icons
5 and whatnot.

6 THE COURT: So just so I understand, as I
7 understand the papers that I have read so far, so
8 the, this can all be done, your innovation is this
9 can all be done remotely, so that wherever the
10 monitoring station is, you know, it could be on the
11 other side of the country, theoretically, when there
12 is an alarm, the map of the property will show up or
13 an image of the property and it will tell what kind
14 of alarm has gone off and in which area it has gone
15 off. So that the, and it is on an image as opposed
16 to just a printout of the location, correct?

17 MR. OFFOR: Yes, that is, in a nutshell,
18 that is correct. And basically so when alarms are
19 generated at a home, whether it is a door open or a
20 smoke detector goes off, those alarms, those alarms
21 would be transferred to some kind of central
22 repository where they are stored and then a user is
23 able to monitor those alarms, you know, through their
24 phone or through some kind of remote device. And so
25 specifically the innovation in this case is they will

1 need to monitor those conditions through an interface
2 where you have icons that represent the locations of
3 the various sensors in the home superimposed on a map
4 of the home like a graphical layout of the home and
5 you will be able to click on those icons, they will
6 get drilled out to more information about the
7 particular alarm and that is in a nutshell the
8 innovation here.

9 THE COURT: And previously the alarm would
10 trip and notice would be sent to the provider, the
11 company, and then some controller would see that the
12 alarm would trip and they would know in a printout
13 fashion or a digital fashion, data fashion which
14 alarm tripped and in which location, and then it
15 would pop up on the screen like the telephone number
16 and the address so that law enforcement could be
17 called and provided that information, but it would be
18 in a data stream as opposed to, I mean, it would be
19 digital data as opposed to the image?

20 MR. OFFOR: Yes, I believe, yes, that is
21 correct.

22 THE COURT: And that is your innovation?

23 MR. OFFOR: It is really an alternate
24 presentation format.

25 THE COURT: Okay.

1 I certify that the foregoing is a correct
2 transcript from the record of proceedings in the
3 above-entitled matter. I further certify that the
4 transcript fees and format comply with those
5 prescribed by the Court and the Judicial Conference
6 of the United States.
