Call Forwarding

Call Forwarding sends your calls to another phone number. The number can be local, long distance, or a mobile phone. You can activate, deactivate, and change your forwarding number at anytime, from your home phone.

Calls forwarded with this service are subject to local or toll charges. If your line is toll restricted, you cannot forward your call to a toll number.

You can make outgoing calls while Call Forwarding is activated.

All calling features are subject to availability and compatibility restrictions.
