STUDIO COOL 4

Constructed with rigid aluminium extrusion profiles, all three models are available with three control module options. The Multi Control version gives full DMX and 0-10V analog control features, as well as a built-in manual dimmer on the back of the fixture. The Phase Control version allows conventional dimming via optional phase load adapters. The basic version is equipped with a 2-position switch, for single On/Off control of one or two tubes. The series covers a performance spectrum of 110-220 Watt.
