Threat Graphs

🕒 Jan 17, 2023

Threat graphs let you investigate and clean up malware attacks.

You can find out where an attack started, how it spread, and which processes or files it has affected. This helps you improve security.

This feature is available only to customers with an Intercept X or Intercept X Advanced with XDR license. If you have an Intercept X Advanced with XDR or Intercept X Advanced for Server with XDR license, you can also do the following:

- Isolate affected devices.
- Search for more examples of the threat on your network.
- Clean up and block the threat.
- Obtain further advanced threat intelligence.

We create a threat graph for you whenever we detect malware that you need to investigate further.
