

Spanish Industrial Design No. I146513 to Muebles Bordonabe, S.A.
Bordonabe Furniture Translation
Spanish to English

A

A. This industrial model consists of an office furniture, specifically a table, characterized by two lateral legs materialized in thick rectangular and parallel boards, provided with a slight perimeter flange at the level of their lower extremity and affected by vertical and middle grooves that affect approximately the lower half of its height, opening towards its lower end, resting on these two extreme legs on a rectangular worktop, with respect to the perimeter of which said legs are substantially tucked. This worktop is made up of two superimposed tops, the lower one with a single piece and the upper one with a cut line in correspondence with its major axis, the upper top being affected, at the middle level of one of its major and free edges, by a small recess of considerable length, like a bevel, determining an arched edge on its upper face, which extends to the proximities of the corresponding legs, and on its front edge, another arched edge of the same extension but with less curvature. Under the front edge of the worktop, in correspondence with the aforementioned bevel, a low drawer is positioned at the center, whose front is in turn affected by a bevel inclined downwards and inwards, corresponding to its lower zone. All the aforementioned is as shown in the attached design.

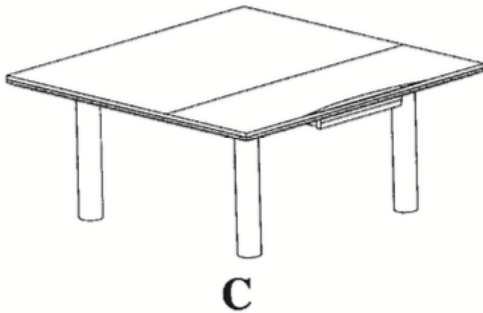

B

B. This industrial model consists of an office furniture, specifically a table, characterized by two lateral legs materialized in thick rectangular and parallel tops, provided with a slight perimeter edge at its lower extremity and affected by vertical and medium grooves that affect approximately the lower half of its height, opening towards its lower end, resting on these two extreme legs on a sensibly quadrangular worktop, with respect to the perimeter of which these

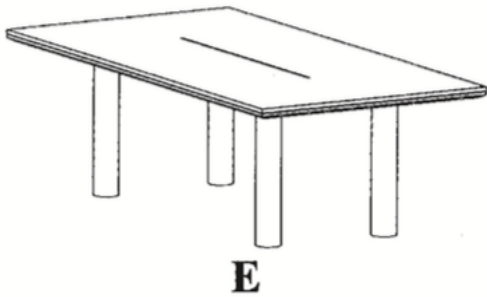

legs are substantially tucked. This worktop consists of two superimposed tops, the lower one being a single piece and the upper one having a cut line parallel to its front edge and markedly offset towards the latter, the upper top being affected, at the middle level of one of its larger and free edges, by a small recess of considerable length, like a bevel, determining on its upper face of an arched edge, which extends to the vicinity of the corresponding legs, and on its front edge of another arched edge, of equal length but with less curvature. Under the front edge of the worktop, in correspondence with the aforementioned bevel, a drawer of low height is centrally placed, whose front is in turn affected by a bevel inclined downwards and inwards, in correspondence with its lower zone.

All the aforementioned is as shown in the attached design.

C. This industrial model consists of an office furniture, specifically a table, characterized by four cylindrical legs, which distributed on imaginary axes of a rectangle, receive an appreciably quadrangular worktop, with respect to the perimeter of which these legs are substantially tucked in. This worktop is divided into two superimposed tops, the lower one being a single piece and the upper one having a cutting line parallel to its front edge and markedly offset towards the latter, the upper top being affected, at the middle level of one of its larger and free edges, by a small recess of considerable length, like a bevel, determining an arched edge on its upper face, which extends to the vicinity of the corresponding legs, and on its front edge another arched edge as well, of equal length but with less curvature. Under the front edge of the worktop, in correspondence with the mentioned bevel, a drawer of low height is centrally placed, whose front is in turn affected by a bevel inclined downwards and inwards, in correspondence with its lower zone.

All the aforementioned is as shown in the attached design.

E. This industrial model consists of an office furniture, specifically a table, characterized by four cylindrical legs which, distributed on imaginary axes of a rectangle, receive an appreciably quadrangular worktop, with respect to the perimeter of which the said legs are substantially tucked in. This worktop is made up of two superimposed tops, the lower one being a single piece and the upper one having a longitudinal cut line, in correspondence with its major axis, which is considerably interrupted before reaching its extreme edges, while the lower top has its lower edge beveled as well.

All the aforementioned is as shown in the attached design.
