UNITED STATES DISTRICT COURT
FOR THE WESTERN DISTRICT OF TEXAS
WACO DIVISION

WEBROOT, INC. and OPEN TEXT, INC., Plaintiffs v. FORCEPOINT LLC, Defendant.	CIVIL ACTION NO. 6:22-CV-00342 **JURY TRIAL DEMANDED**
FORCEPOINT LLC, Counterclaim Plaintiff, v. WEBROOT, INC., OPEN TEXT, INC., and OPEN TEXT CORPORATION Counterclaim-Defendants.	

DEFENDANT FORCEPOINT LLC'S
FINAL INVALIDITY CONTENTIONS

I. INTRODUCTION

Pursuant to the Court's Standing Order Governing Proceedings (OGP 4.1) – Patent Cases, Dkt. No. 13 (the "Order") and the Scheduling Order in this case, Defendant Forcepoint LLC ("Forcepoint" or "Defendant") hereby provides the following Final Invalidity Contentions ("Contentions") to Plaintiffs and Counterclaim Defendants Webroot Inc. ("Webroot"), Open Text, Inc. ("OTI"), and Open Text Corp. ("OTC") (collectively, "Plaintiffs") for asserted U.S. Patent Nos. 10,025,928 (the "'928 Patent"), 8,438,386 (the "'386 Patent"), 10,599,844 (the "'844 Patent"), 8,726,389 (the "'389 Patent"), 9,413,721 (the "'721 Patent"), 8,201,243 (the "'243

IPR2023-00786
Open Text Inc. EX-2013

Patent"), 8,719,932 (the "'932 Patent"), and 11,409,869 (the "'869 Patent") (collectively, the "Asserted Patents").[1] Forcepoint reserves the right to supplement or modify these Contentions, consistent with the Order.

Discovery is ongoing, and accordingly, Forcepoint reserves the right to revise or supplement these Contentions in light of party and third-party discovery. While Forcepoint's Contentions take the Court's claim construction into account, Forcepoint's Contentions are based in whole or in part on its present understanding of Plaintiffs' contentions concerning the scope and construction of the claims in their Infringement Contentions and Forcepoint's own understanding of the scope and construction of those claims. Plaintiffs' Infringement Contentions are deficient at least insofar as they fail to articulate how any single accused product or the use of any single accused product infringes any claim, and Forcepoint reserves the right to further amend its Contentions in response to any further supplementation or amendment of Plaintiffs' Infringement Contentions. Forcepoint takes no position on any matter of claim construction in these Contentions with respect to claim term that has not been construed. Any statement herein describing or tending to describe any unconstrued claim element is provided solely for the purpose of understanding the relevant prior art. Forcepoint further reserves the right to amend these Contentions based on any further claim construction orders by the Court.

[1] On October 17, 2023, the same day as the parties' original deadline to serve Final Infringement and Final Invalidity Contentions, and 15 days before the agreed extended deadline, Plaintiffs indicated that they intend to move for leave to supplement their infringement contentions to assert additional claims (i.e., claims 15–29) for the '389 Patent. Forcepoint opposes Plaintiffs' proposed supplement. Due to the prejudice inflicted upon Forcepoint by Plaintiffs' eleventh-hour proposed supplement, and the fact that the Court has not had a chance to address this issue, Forcepoint's Final Invalidity Contentions are hereby included with the express reservation of the right to supplement or modify the same to address these additional claims if and when the Court grants Plaintiffs' motion for leave. Likewise, Forcepoint is investigating the recently served proposed supplemental contentions and reserves all rights with respect to any other new contentions, including but not limited to new infringement theories advancing new or different claim interpretations or claim scope, for which Forcepoint reserves the right to identify and chart additional art and assert additional invalidity grounds under §§ 101, 102, 103, and/or 112.

Forcepoint further reserves the right to interpret these terms differently over the course of the litigation, and does not adopt any interpretations impliedly or expressly put forth in these Contentions. Accordingly, Forcepoint's Contentions, including the attached claim charts, may reflect alternative positions as to claim construction and scope. Nothing in this document or the attached claim charts, however, should be construed as an admission that Forcepoint agrees with Plaintiffs' contentions or that any claim, whether asserted or not, of the Asserted Patents is valid, enforceable, or infringed.

Accompanying claim charts contain specific examples of prior art references, patents, knowledge, inventions, uses, sales, methods, and/or systems that included and/or disclosed, either expressly or inherently, each limitation of certain claims and/or examples of prior art references and systems in view of which a person of ordinary skill in the art would have considered each limitation and the claimed combination of such limitations obvious. Forcepoint has endeavored to identify relevant portions and/or features of the identified prior art. The identified prior art, however, may contain additional descriptions of or alternative support for the claim limitations. Forcepoint may rely upon un-cited portions or features of the identified prior art, other documents, and expert testimony to provide context or to aid them in understanding the identified prior art. Where Forcepoint cites to a particular figure in a reference, the citation should be understood to encompass the caption and description of the figure and any text relating to the figure. Similarly, where Forcepoint cites to particular text referring to a figure, the citation should be understood to include the figure and caption as well.

Forcepoint reserves the right to further amend these disclosures should Plaintiffs later provide any information that they failed to provide in their disclosures under Section II, Paragraph 2 of the Order or should Plaintiffs further amend their disclosures under Section II, Paragraph 2 of

the Order in any way. Moreover, Forcepoint reserves the right to revise their ultimate Contentions concerning the invalidity of the Asserted Claims, which may change in response to any further order by the Court concerning the construction of the Asserted Claims, additional information obtained during the discovery period, any findings as to the priority date of the Asserted Claims, and/or positions that Forcepoint or any expert witnesses may take concerning claim construction, infringement, and/or invalidity issues. Forcepoint hereby provides disclosures and related documents pertaining only to the Asserted Claims as identified by Plaintiffs in their Preliminary Infringement Contentions, served July 12, 2022, and authorized supplements thereto. Forcepoint reserves the right to modify, amend, or supplement these Contentions to address any additional claims that the Court may allow Plaintiffs to later assert.

Forcepoint further intends to rely upon inventor admissions concerning the scope of the Asserted Claims, and prior art relevant to the Asserted Claims, found in: the Asserted Patents, the patent prosecution histories for the Asserted Patents, and related patents and/or patent applications; any deposition testimony of any inventor of the Asserted Patents; any previous trial testimony of any inventor of the Asserted Patents; and any papers filed or any evidence produced or submitted by Plaintiffs or their affiliates in connection with this litigation, or any previous litigation, related to any of the Asserted Patents. In particular, Forcepoint reserves the right to contend that the Asserted Claims are invalid in view of admitted prior art, or under pre-AIA 35 U.S.C. § 102(f) in the event Forcepoint obtains evidence that inventors named in the Asserted Patents did not invent (either alone or in conjunction with others) the subject matter claimed in the Asserted Patents. Should Forcepoint obtain such evidence, they will provide the name of the person(s) from whom and the circumstances under which the claimed invention or any part thereof was derived.

Prior art not included in these Contentions, whether known or not known to Forcepoint, may become relevant. Forcepoint is currently unaware of the extent, if any, to which Plaintiffs will contend that limitations of the Asserted Claims are not disclosed in the prior art identified by Forcepoint. Forcepoint reserves the right to identify additional references that would render obvious the allegedly missing limitation(s) of the disclosed device or method. Discovery is ongoing, and Forcepoint has not yet completed its search for and analysis of relevant prior art. Thus, Forcepoint reserves the right to revise, amend, and/or supplement the information provided herein, including identifying, charting, and relying on additional references, should Forcepoint's further search and analysis yield additional information or references, consistent with the Order and the Federal Rules of Civil Procedure.

Prior art patents or publications included in these Contentions may be related (*e.g.*, as a divisional, continuation, continuation-in-part, parent, child, or other relation or claim of priority) to earlier or later filed patents or publications, may have counterparts filed in other jurisdictions, or may incorporate (or be incorporated by) other patents or publications by reference. The listed patents or publications are intended to be representative of these other patents or publications, to the extent they exist. Accordingly, Forcepoint reserves the right to modify, amend, and/or supplement these Contentions with these related patents or publications, as well as other prior art references, upon further investigation.

Additionally, because third-party discovery is not yet complete, Forcepoint reserves the right to present additional items of prior art under 35 U.S.C. §§ 102(a), (b), (e), and/or (g), and/or § 103 located during the course of such discovery or further investigation, and to assert contentions of invalidity under 35 U.S.C. §§ 102(c), (d), or (f) to the extent that such discovery or investigation

yields information forming the basis for such contentions of invalidity.[2] For example, Forcepoint may issue subpoenas in the course of discovery to third parties believed to have knowledge, documentation, and/or corroborating evidence concerning some of the prior art listed below and/or additional prior art. These third parties may include, without limitation, the authors, inventors, developers, designers, or assignees of the references and systems listed in these disclosures.

In those instances where Forcepoint asserts that the claims are invalid under 35 U.S.C. § 112 (*e.g.*, no written description, not enabled, and/or indefinite), Forcepoint has applied the prior art, in part, in accordance with Forcepoint's assumptions that Plaintiffs: (1) contend those claims are definite; (2) find written description support for those claims; and (3) contend that those claims are enabled. However, Forcepoint's prior art and Invalidity Contentions do not necessarily represent Forcepoint's agreement or view as to the meaning, definiteness, written description support for, or enablement of any claim contained therein. In fact, Forcepoint notes numerous grounds for invalidity on such bases below.

II. BACKGROUND

A. The Asserted Claims

Plaintiffs are asserting the following claims of the Asserted Patents:

Patent	Asserted Claims
'389 Patent	1-14, 30 ("Asserted '389 Patent Claims")
'844 Patent	1-3, 6-12, and 15-20 ("Asserted '844 Patent Claim")
'721 Patent	1, 8, 9, 14, and 15 ("Asserted '721 Patent Claims")
'386 Patent	1-13, 15, 16, and 18 ("Asserted '386 Patent Claims")

[2] Throughout these Contentions, Forcepoint applies post-AIA sections to the '844 and '869 Patents based on their filing date and the equivalent pre-AIA sections to the other Asserted Patents based on their filing dates. All references to 35 U.S.C. throughout these Contentions should be understood to apply the appropriate pre-AIA or post-AIA sections accordingly.

Patent	Asserted Claims
’928 Patent	1-20 (“Asserted ’928 Patent Claims”)
’243 Patent	1-14 (“Asserted ’243 Patent Claims”)
’932 Patent	1-15 (“Asserted ’932 Patent Claims”)
’869 Patent	18-21, 24, 26-35, 38, 40-49, 52, 54-59 (“Asserted ’869 Patent Claims”)

B. Priority Dates of the Asserted Claims

The ’389 Patent

Plaintiffs contend that the ’389 Patent is entitled to a priority date of June 30, 2005, based on the filing of foreign patent application GB 01513375.6. But, as a preliminary matter, GB 01513375.6 and U.S. Patent Application No. 11/477,807 (the first U.S. Patent application filed relating to the ’389 Patent) do not share a common applicant or inventor as required by 35 U.S.C. § 119(a) to claim priority to a foreign application. In addition, Plaintiffs have yet to substantively respond to Forcepoint’s Interrogatory No. 9 (served May 1, 2023), which asked Plaintiffs to set forth the complete basis for each Asserted Claim’s priority date, including claim charts with specific citations within each priority document as to where and how each claim element is described and enabled in accordance with 35 U.S.C. § 112. Therefore, Forcepoint contends that no Asserted Claim of the ’389 Patent is entitled to a priority date earlier than June 30, 2006, though Forcepoint does not concede that the ’389 Patent is necessarily even entitled to that priority date.

The ’844 Patent

Forcepoint contends that no Asserted Claim of the ’844 Patent is entitled to a priority date earlier than May 12, 2015, though Forcepoint does not concede that the ’844 Patent is necessarily even entitled to that priority date.

The '721 Patent

Plaintiffs contend that the '721 Patent is entitled to an earlier priority date based on alleged conception in May 2010 followed by continuous diligence and an actual reduction to practice of the claimed inventions no later than November 30, 2010. Forcepoint disagrees that Plaintiffs' conception and reduction-to-practice allegations and evidence establish that the '721 Patent is entitled to an earlier priority date, including because Plaintiffs have yet to substantively respond to Forcepoint's Interrogatory No. 9 (served May 1, 2023), which asked Plaintiffs to set forth the complete basis for their contentions regarding the named inventors and their specific contribution(s) to the Asserted Claims, and the date, location, circumstances, and any corroborating evidence of the invention's conception, reduction to practice, and any acts of diligence.

Forcepoint contends that no Asserted Claim of the '721 Patent is entitled to a priority date earlier than February 15, 2011, though Forcepoint does not concede that the '721 Patent is necessarily even entitled to that priority date. As previously mentioned, Plaintiffs have not substantively answered Forcepoint's Interrogatory No. 9, which asked Plaintiffs to set forth the complete basis for each Asserted Claim's priority date, including claim charts with specific citations within each priority document as to where and how each claim element is described and enabled in accordance with 35 U.S.C. § 112. Accordingly, Plaintiffs have not established that the '721 Patent is entitled to claim the benefit of even Provisional Application No. 61/443,095.

The '386 Patent

Plaintiffs contend that the '386 Patent is entitled to a priority date of April 21, 2009, based on the filing of Provisional Application No. 61/171,264. While Forcepoint contends that no Asserted Claim of the '386 Patent is entitled to a priority date earlier than April 21, 2009,

Forcepoint does not concede that the ’386 Patent is necessarily even entitled to that priority date. As previously mentioned, Plaintiffs have not substantively answered Forcepoint’s Interrogatory No. 9, which asked Plaintiffs to set forth the complete basis for each Asserted Claim’s priority date, including claim charts with specific citations within each priority document as to where and how each claim element is described and enabled in accordance with 35 U.S.C. § 112. Accordingly, Plaintiffs have not established that the ’386 Patent is entitled to claim the benefit of Provisional Application No. 61/171,264.

The ’928 Patent

Plaintiffs contend that the ’928 Patent is entitled to a priority date of October 3, 2011, based on the filing of Provisional Application No. 61/542,693. While Forcepoint contends that no Asserted Claim of the ’928 Patent is entitled to a priority date earlier than October 3, 2011, Forcepoint does not concede that the ’928 Patent is necessarily even entitled to that priority date. As previously mentioned, Plaintiffs have not substantively answered Forcepoint’s Interrogatory No. 9, which asked Plaintiffs to set forth the complete basis for each Asserted Claim’s priority date, including claim charts with specific citations within each priority document as to where and how each claim element is described and enabled in accordance with 35 U.S.C. § 112. Accordingly, Plaintiffs have not established that the ’928 Patent is entitled to claim the benefit of Provisional Application No. 61/542,693.

The ’243 Patent

Plaintiffs purport that the ’243 Patent is entitled to a priority date of April 20, 2006, based on the purported filing date of the ’243 Patent. Forcepoint contends that no Asserted Claim of the ’243 Patent is entitled to a priority date earlier than April 20, 2006, though Forcepoint does not concede that the ’243 Patent is necessarily even entitled to that priority date.

The '932 Patent

Plaintiffs purport that the '932 Patent is entitled to a priority date of April 20, 2006, corresponding to the purported filing date of U.S. Patent Application No. 11/408,146. Forcepoint contends that no Asserted Claim of the '932 Patent is entitled to a priority date earlier than April 20, 2006, though Forcepoint does not concede that the '932 Patent is necessarily even entitled to that priority date.

The '869 Patent

Plaintiffs purport that the '869 Patent is entitled to a priority date of May 12, 2015, corresponding to the purported filing date of U.S. Patent Application No. 14/709,875. Forcepoint contends that no Asserted Claim of the '869 Patent is entitled to a priority date earlier than May 12, 2015, though Forcepoint does not concede that the '869 Patent is necessarily even entitled to that priority date.

III. INVALIDITY CONTENTIONS FOR THE '389 PATENT

A. General State of the Art at the Time of the Alleged Inventions

The prior art references identified in these Invalidity Contentions, and the "References Cited" on the face of the '389 Patent, may provide background and context pertinent to the teachings in, and interpretation of, the prior art referenced by the attached claim charts. Forcepoint may rely upon that prior art, including the "References Cited" on the face of the '389 Patent, to demonstrate the general state of the art at the time of the alleged inventions and what one of ordinary skill in the art would have understood at a time prior to the date of the alleged invention of the Asserted Claims. This prior art is exemplary only and is not in any way intended to limit the scope of what one of ordinary skill in the art would have understood at the times of the alleged inventions. Forcepoint reserves the right to rely upon additional prior art, information, and/or

knowledge to demonstrate what one of ordinary skill would have understood at any time prior to the date of alleged invention of the Asserted Claims.

B. Claim Charts

Pursuant to Section II, Paragraph 4 of the Order, the claim charts attached in Appendix A as Exhibits 389-A-1 through 389-A-21 identify where each limitation of the Asserted Claims of the '389 Patent is found in the prior art.

C. Identification of the Prior Art

Based on Plaintiffs' Preliminary Infringement Contentions and authorized supplements thereto, Forcepoint identifies prior art below and in Appendix A as Exhibits 389-A-1 through 389-A-21, which contains charts disclosing the identity of each item of prior art that anticipates each claim and/or renders it obvious. As shown in Appendix A as Exhibits 389-A-1 through 389-A-21 and below, Forcepoint has identified each prior art reference by its number, country of origin, author, and date of issue (where applicable). Forcepoint notes that it has applied the prior art in accordance with Plaintiffs' improper assertions of infringement and improper applications of the claims. Forcepoint does not agree with Plaintiffs' application of the claims and denies infringement.

Forcepoint further contends that all claims that are anticipated by a particular reference are also rendered obvious by that same reference alone, in combination with the other references, and/or in combination with the knowledge of a person of ordinary skill in the art. Forcepoint reserves the right to rely upon any combination of the charted prior art under 35 U.S.C. § 103, yet Forcepoint has also identified exemplary obviousness combination in Section III.E, *infra*.

Furthermore, with respect to the '389 Patent, under pre-AIA 35 U.S.C. § 102(f), Forcepoint identifies the activities of entities involved in computer security as referenced in foreign patent application GB 01513375.6, to which Plaintiffs claim priority. *See, e.g.*, GB 01513375.6 at 1-3.

Furthermore, with respect to the '389 Patent, under pre-AIA 35 U.S.C. §§ 102(a), (b), and (g)(2), Forcepoint reserves the right to identify additional prior art systems developed prior to June 30, 2006. *See, e.g.*, *Intell. Ventures II LLC v. FedEx Corp.*, No. 2:16-CV-00980-JRG, 2019 WL 1434656, at *8-11 (E.D. Tex. Mar. 29, 2019). Discovery is ongoing, and Forcepoint reserves the right to amend the Invalidity Contentions herein based on third-party discovery obtained.

D. Anticipation

At least under Plaintiffs' apparent infringement theory, the Asserted Claims of the '389 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by the references as set forth in the attached claim charts. At least under Plaintiffs'

apparent infringement theory, Asserted Claims 1-7 and 30 of the ’389 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Scheidell as set forth in the attached claim chart. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 1-6 of the ’389 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Cambridge 956 as set forth in the attached claim chart. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 1-5 and 8 of the ’389 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Thomas as set forth in the attached claim chart. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 1-5, 9-14, and 30 of the ’389 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Tuvell 871 as set forth in the attached claim chart. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 1-7, 9, 11, 14, and 30 of the ’389 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Halperin and Kirby as set forth in the attached claim chart. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 1-7, 9, 11-14, and 30 of the ’389 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Hernacki as set forth in the attached claim chart. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 1-7, 9-11, 13-14, and 30 of the ’389 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Loukas as set forth in the attached claim chart. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 1, 14, and 30 of the ’389 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by van der Made as set forth in the attached claim chart. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 1-2 and 4-6 of the ’389 Patent are anticipated, either

expressly or inherently as understood by a person having ordinary skill in the art, by Farley 381 as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-3, 5-7, 9, 11, 14, and 30 of the '389 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Palliyil as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-2, 6, 9, 11, 14, and 30 of the '389 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Inoue as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-3, 6-7, and 9-11 of the '389 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Kingsford as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-2, and 4-5 of the '389 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by SurfControl as set forth in the attached claim chart.

E. Obviousness

At least under Plaintiffs' apparent infringement theory, the Asserted Claims of the '389 Patent are rendered obvious by the references identified in the attached claim charts, either alone or in the combinations with other prior art references as identified below. Forcepoint contends that one of ordinary skill in the art, at the time of the alleged invention of the Asserted '389 Patent Claims, would have been motivated to combine the references disclosed herein in such a way to reach the alleged inventions. In certain instances, the suggested obviousness combinations are provided in the alternative to Forcepoint's anticipation contentions, which shall not be construed to suggest that any reference included in the combinations is not by itself anticipatory. The combinations evidencing teachings, suggestions, and/or motivations to combine the prior-art references in a way that renders the Asserted Claims obvious are merely exemplary.

One of ordinary skill in the art would be motivated to combine these references in the above combinations for at least the following reasons. One of ordinary skill in the art would have understood that each of these references are in the same field of endeavor, namely methods and

devices relating to computer security. *See, e.g.*, Cambridge 956 at Abstract; Scheidell at Abstract; Thomas at Abstract; Tuvell 871 at Abstract; van der Made at Abstract; Loukas at 1:42-62; Kirby at 2:21-42; Kester 035 at [0003]; Hernacki at [Abstract]; Halperin at Abstract; Cambridge 000 at 5:22-24; Costea at 8:15-26; Hooks at [0094]; Farley 381 at [0016]; Palliyil at [0009]; Hatonen at [0012]; Kouznetsov at 2:32-41; Inoue at [Page 52; Abstract]; Kidron at 1:16-19; Kingsford at 2:8-11; and SurfControl (Exhibit 389-A-21) at 6 (citing 2003 Evaluators' Guide at 6).

One of ordinary skill in the art would have recognized that these references are directed to addressing the same problem, in particular, improving computer security. *See, e.g.*, Cambridge 956 at Abstract; Scheidell at Abstract; Thomas at 3:44-49; Tuvell 871 at 4:29-37; van der Made at 1:15-18; Loukas at 1:42-62; Kirby at 2:56-3:6; Kester 035 at [0003]; Hernacki at [0051]; Halperin at Abstract; Cambridge 000 at 5:22-24; Costea at 8:15-26; Hooks at [0094]; Farley 381 at [0016]; Palliyil at [0009]; Hatonen at [0012]; Kouznetsov at 2:32-41; Inoue at [Page 52; Abstract]; Kidron at 1:16-19; Kingsford at 2:8-11; and SurfControl (Exhibit 389-A-21) at 6 (citing 2006 Web Filter Datasheet at 4).

Further, the Asserted Claims of the '389 Patent contain merely a duplication of concepts known in the prior art and have no patentable significance given that no unexpected results occur—*i.e.* the patentee merely combines known prior art elements according to known methods to yield predictable results. For example, the prior art references describe a "method of classifying a computer object as malware" *See, e.g.*, Cambridge 956 at Abstract; Scheidell at Abstract; Thomas at Abstract; Tuvell 871 at Abstract; van der Made at Abstract; Loukas at 1:42-62; Kirby at 2:21-42; Kester 035 at [0003]; Hernacki at [Abstract]; Halperin at Abstract; Cambridge 000 at 5:22-24; Costea at 8:15-26; Hooks at [0094]; Farley 381 at [0016]; Palliyil at [0009]; Hatonen at [0012];

Kouznetsov at 2:32-41; Inoue at [Page 52; Abstract]; Kidron at 1:16-19; Kingsford at 2:8-11; and SurfControl (Exhibit 389-A-21) at 6 (citing 2003 Evaluators' Guide at 6).

The prior art references further describe "at a base computer, receiving data about a computer object from a first remote computer on which the computer object or similar computer objects are stored, wherein said data includes information about events initiated or involving the computer object when the computer object is created, configured or runs on the first remote computer, said information including at least an identity of an object initiating the event, the event type, and an identity of an object or other entity on which the event is being performed." *See, e.g.*, Cambridge 956 at 11:45-55; Scheidell at 4:64-5:13; Thomas at 7:36-51; Tuvell 871 at 34:65-35:20; van der Made at 5:16-26; Loukas at Claim 1; Kirby at 9:37-53; Kester 035 at [0076]; Hernacki at [0003]; Halperin at [0061]; Cambridge 000 at 4:4-14; Costea at 3:8-14; Hooks at [0017]; Farley 381 at [0066]; Palliyil at [0013]; Hatonen at [0043]; Kouznetsov at 2:32-41; Inoue at [Page 58; Paragraph 6]; Kidron at 3:27-40; Kingsford at 2:42-45; and SurfControl (Exhibit 389-A-21) at 8 (citing Spyware Factsheet at 2).

The prior art references further describe "at the base computer, receiving data about the computer object from a second remote computer on which the computer object or similar computer objects are stored, wherein said data includes information about events initiated or involving the computer object when the computer object is created, configured, or runs on the second remote computer, said information including at least an identity of an object initiating the event, the event type, and an identity of an object or other entity on which the event is being performed." *See, e.g.*, Cambridge 956 at 11:45-55; Scheidell at 4:64-5:13; Thomas at 7:36-51; Tuvell 871 at 34:65-35:20; van der Made at 5:16-26; Loukas at Claim 1; Kirby at 9:37-53; Kester 035 at [0076]; Hernacki at [0003]; Halperin at [0061]; Cambridge 000 at 4:4-14; Costea at 3:8-14; Hooks at [0017]; Farley

381 at [0066]; Palliyil at [0013]; Hatonen at [0043]; Kouznetsov at 2:32-41; Inoue at [Page 58; Paragraph 6]; Kidron at 3:27-40; Kingsford at 2:42-45; and SurfControl (Exhibit 389-A-21) at 13 (citing 2004 Websense Enterprise Product Overview at 4).

The prior art references further describe "storing, at the base computer, said data received from the first and second remote computers." *See, e.g.*, Cambridge 956 at 6:28-38; Scheidell at 4:64-5:13; Thomas at 9:62-10:7; Tuvell 871 at 15:19-31; van der Made at 3:61-4:3; Loukas at 8:49-61; Kirby at 9:54-10:12; Kester 035 at [0076]; Hernacki at [0003]; Halperin at [0088]; Cambridge 000 at 3:60-67; Costea at 5:52-59; Hooks at [0085]; Farley 381 at [0066]; Palliyil at [0013]; Hatonen at [0043]; Kouznetsov at 4:59-5:3; Inoue at [Page 54; Paragraph 13 – Page 55; Paragraph 1]; Kidron at 8:35-42; Kingsford at 2:32-41; and SurfControl (Exhibit 389-A-21) at 17 (citing 2004 SMTP Guide at 4).

The prior art references further describe "correlating, by the base computer, at least a portion of the data about the computer object received from the first remote computer to at least a portion of the data about the computer object received from the second remote computer." *See, e.g.*, Cambridge 956 at 8:7-8:15; Scheidell 4:3-18; Thomas at 8:46-9:4; Tuvell 871 at 2:64-3:12; van der Made at 3:54-4:7; Loukas at 6:54-61; Kirby at 7:45-62; Kester 035 at [0070]; Hernacki at [0025]; Halperin at [0047]; Cambridge 000 at 8:1-4; Costea at 8:15-26; Hooks at [0134]; Farley 381 at [0019]; Palliyil at [0046]; Hatonen at [0043]; Kouznetsov at 2:32-41; Inoue at [Page 56; Paragraph 6]; Kidron at 3:27-40; Kingsford at 2:53-60; and SurfControl (Exhibit 389-A-21) at 25 (citing 2005 Websense Enterprise Admin Guide at 280).

The prior art references further describe "comparing, by the base computer, the correlated data about the computer object received from the first and second remote computers to other objects or entities to identify relationships between the correlated data and the other objects or

entities." *See, e.g.*, Cambridge 956 at 8:7-8:15; Scheidell 4:3-18; Thomas at 8:46-9:4; Tuvell 871 at 2:64-3:12; van der Made at 3:54-4:7; Loukas at 6:54-61; Kirby at 7:45-62; Kester 035 at [0070]; Hernacki at [0025]; Halperin at [0047]; Cambridge 000 at 3:60-67; Costea at 5:11-14; Hooks at [0093]; Farley 381 at [0155]; Palliyil at [0009]; Hatonen at [0043]; Kouznetsov at 2:32-41; Inoue at [Page 56; Paragraph 6]; Kidron at 3:27-40; Kingsford at 3:19-22; and SurfControl (Exhibit 389-A-21) at 26 (citing Spyware Factsheet at 2).

The prior art references further describe "classifying, by the base computer, the computer object as malware on the basis of said comparison." *See, e.g.*, Cambridge 956 at 9:22-32; Scheidell 4:3-18; Thomas at 8:46-9:4; Tuvell 871 at 2:64-3:12; van der Made at 3:54-4:7; Loukas at 6:54-61; Kirby at 4:17-34; Kester 035 at [0076]; Hernacki at [0021]; Halperin at [0037]; Cambridge 000 at 5:22-24; Costea at 6:47-64; Hooks at [0094]; Farley 381 at [0126]; Palliyil at [0013]; Hatonen at [0043]; Kouznetsov at 2:32-41; Inoue at [Page 54; Paragraph 1]; Kidron at 8:5-15; Kingsford at 3:30-31; and SurfControl (Exhibit 389-A-21) at 29 (citing Spyware Factsheet at 2).

Other examples of these concepts are cited in the attached charts for the above references. *See* Exs. 389-A-1 through 389-A-21. It would have been known and simple to take a prior art for malware detection by comparison with similar objects, and it would have been obvious to a POSITA to try this. *Id.* It would have also yielded predictable results in the context of improving computer security. *Id.*

Forcepoint is not aware of any secondary considerations supporting non-obviousness of the '389 Patent claims. To the extent Plaintiffs seek to introduce any alleged secondary considerations in the future, Forcepoint reserves the right to respond at that time.

Forcepoint is not aware of any secondary considerations supporting non-obviousness of the '389 Patent claims. To the extent Plaintiffs seek to introduce any alleged secondary considerations in the future, Forcepoint reserves the right to respond at that time.

F. Invalidity Under Section 112

Pursuant to Section II, Paragraph 4 of the Order, Forcepoint provides an identification of the limitations of the '389 Patent that are invalid based on indefiniteness under pre-AIA 35 U.S.C. § 112 ¶ 2, or enablement or written description under pre-AIA 35 U.S.C. § 112 ¶ 1. These Contentions are being proffered without the full benefit of expert disclosure or discovery.

Asserted Claims 1-5, 7-9, 12, 14 of the '389 Patent (and all claims which depend from these claims) are indefinite, and thus invalid. "[A] patent is invalid for indefiniteness if its claims, read in light of the specification delineating the patent, and the prosecution history, fail to inform, with reasonable certainty, those skilled in the art about the scope of the invention." *Nautilus, Inc. v. Biosig Instruments, Inc.*, 572 U.S. 898, 901 (2014). For example, as applied in Plaintiffs' Infringement Contentions, the terms "correlating, by the base computer, at least a portion of the data about the computer object received from the first remote computer to at least a portion of the data about the computer object received from the second remote computer"; "comparing, by the base computer, the correlated data about the computer object received from the first and second remote computers to other objects or entities"; "other entity" / "entities"; "relationships between the correlated data and the other objects or entities"; "on the basis of said comparison"; "similar object" / "similar computer objects"; "Correlating" / "correlated"; "at least a portion"; "the relationship is between objects related directly, or between objects related via other objects"; "monitoring those related objects as a homogenous entity"; "common object"; "monitoring"; "homogenous entity"; "deducing an object to be malware"; "classed as malware"; "process-related objects"; "other objects includes other objects"; "data about the computer object that is sent from

the respective remote computer to the base computer and that is used in the comparison"; "the data"; "said data about said computer object"; "operation"; "monitoring an operation of the computer object on at least one of the first and second remote computers"; "the actual monitored behaviour" / "the monitored behaviour"; "reclassifying the computer object as malware"; "initially classifying a computer object as not malware"; and "acceptable behaviour" are indefinite because each of these phrases not only is subjective but also does not have a meaning that can be clearly determined from the patent, and thus fails to put the public on notice of what is and is not covered by these claims.

Asserted Claims 1-3, 7-8, 10-11, and 13-14 of the '389 Patent are invalid under § 112 ¶ 1, because the specification as filed does not contain a sufficient written description supporting those claims. For example, the patent disclosure would not lead a person of ordinary skill in the art to understand that the named inventor had possession of the purported inventions as claimed and in view of Plaintiffs' contentions. For example, Asserted Claims 1-3, 7-8, 10-11, and 13-14 (and all claims that depend from these claims) fail to satisfy the requirements of 35 U.S.C. § 112 for at least the following reasons: the '389 Patent fails to provide an adequate written description of the phrases "correlating, by the base computer, at least a portion of the data about the computer object received from the first remote computer to at least a portion of the data about the computer object received from the second remote computer"; "comparing, by the base computer, the correlated data about the computer object received from the first and second remote computers to other objects or entities"; "other entity" / "entities"; "relationships between the correlated data and the other objects or entities"; "on the basis of said comparison"; "similar object" / "similar computer objects"; "events initiated or involving"; "at least a portion"; "the relationship is between objects related directly, or between objects related via other objects"; "homogenous entity"; "process-

related objects"; "data about the computer object that is sent from the respective remote computer to the base computer and that is used in the comparison"; "operation"; "monitoring an operation of the computer object on at least one of the first and second remote computers"; "the actual monitored behaviour" / "the monitored behaviour"; "reclassifying the computer object as malware"; and "acceptable behaviour" as applied in Plaintiffs' Infringement Contentions.

The aforementioned claims are invalid because they are not enabled or described by the specification of the '389 Patent. The subject matter of these claims, as described above, are not sufficiently shown in the specification of the '389 Patent. The subject matter of these claims, as described above, are not sufficiently enabled because they do not teach one skilled in the art how to make and use the alleged invention from the specification of the '389 Patent. For example, the '389 Patent fails to enable the following and thus, Asserted Claims 1-3, 7-8, 10-11, and 13-14 of the '389 Patent are invalid: "correlating, by the base computer, at least a portion of the data about the computer object received from the first remote computer to at least a portion of the data about the computer object received from the second remote computer"; "comparing, by the base computer, the correlated data about the computer object received from the first and second remote computers to other objects or entities"; "other entity" / "entities"; "relationships between the correlated data and the other objects or entities"; "on the basis of said comparison"; "similar object" / "similar computer objects"; "events initiated or involving"; "at least a portion"; "the relationship is between objects related directly, or between objects related via other objects"; "homogenous entity"; "process-related objects"; "data about the computer object that is sent from the respective remote computer to the base computer and that is used in the comparison"; "operation"; "monitoring an operation of the computer object on at least one of the first and second remote computers"; "the actual monitored behaviour" / "the monitored behaviour"; "reclassifying

the computer object as malware"; and "acceptable behaviour." The foregoing phrases are not described in such a way that one of ordinary skill in the art could implement it to achieve the results sought by the individual named on the face of the '389 Patent as the inventor. The foregoing phrases are not described in such a way that a person having ordinary skill in the art at the time of the alleged invention would have understood that the individual named as the inventor on the face of the '389 Patent was in possession of the claimed subject matter. The Asserted Claims of the '389 Patent also do not comply with § 112 because they do not set forth what the applicant regards is the invention.

A more detailed basis for the above indefiniteness, written description, and enablement defenses may be set forth in any expert report(s) on invalidity to be served on Plaintiffs in accordance with the Court's Scheduling Order.

G. Invalidity Under Section 101

Pursuant to Section II, Paragraph 4 of the Order, Forcepoint provides an identification of the claims of the '389 Patent they contend are directed to ineligible subject matter under pre-AIA 35 U.S.C. § 101. These Contentions are being proffered without expert disclosure or discovery.

Each Asserted Claim of the '389 Patent is directed to ineligible subject matter under 35 U.S.C. § 101. First, the Asserted Patent Claims of the '389 Patent are directed to the abstract idea of data classification based on reference data points, which amounts to receiving information, analyzing information, and outputting a result. *See, e.g.*, '389 Patent, claim 1 ("receiving data about a computer object from a first remote computer . . . wherein said data includes information about events initiated or involving the computer object when the computer object is created, configured or runs on the first remote computer," "receiving data about the computer object from a second remote computer . . . wherein said data includes information about events initiated or involving the computer object when the computer object is created, configured, or runs on the

second remote computer," "correlating . . . at least a portion of the data about the computer object received from the first remote computer to at least a portion of the data about the computer object received from the second remote computer," "comparing . . . the correlated data . . . to other objects or entities to identify relationships," "classifying . . . the computer object as malware on the basis of said comparison"). The specification of the '389 confirms that the Asserted Claims are directed to basic concepts of receiving information, analyzing information, and outputting a result. *See, e.g.*, *id.*, 1:1—17 ("In one aspect, the present invention relates to a method and apparatus for classifying a computer object as malware. . . . In another aspect, the present invention relates to a method and apparatus for classifying a computer object as malware or as safe."); 3:4–13 ("According to a first aspect of the present invention, there is provided a method of classifying a computer object as malware, the method comprising: at a base computer, receiving data about a computer object from each of plural remote computers on which the object or similar objects are stored; comparing in the base computer the data about the computer object received from the plural computers; and, classifying the computer object as malware on the basis of said comparison."); 3:14–19 ("Compared to the prior art that relies solely on signature matching, this aspect allows a comparison to be made between the objects and/or their effects on the different remote computers to determine whether or not a particular object should be classed as good or as malware."); 3:18–19 ("Sophisticated pattern analysis can be carried out."); *see also* 2:13–19 ("Such analysis is typically carried out manually or "semi-manually" by subjecting the file to detailed analysis, for example by emulation or interpretation, which can still take days given the human involvement that is typically required. There is therefore still a considerable period of time before a new file is classified as safe or as malware."); 2:27–33 ("[S]ome limited audit information about the prevalence of the file on other local computers can be sent to a human system administrator

associated with the local computer that is seeking permission to run the file. The human system administrator can therefore make a better informed though still "manual" decision as to whether or not the file is safe to run.").

Second, the Asserted Claims of the '389 Patent do not contain any inventive concept as they combine standard, generic, and well-known components in a conventional way to arrive at the claimed invention. The '389 Patent describes performing data classification based on reference data points (receiving information, analyzing information, and outputting a result) using conventional computing devices, computer programs, computer objects, storage media, and networks well-known in the prior art. *See, e.g.*, *id.*, 7:29–45 ("Although the embodiments of the invention described with reference to the drawings comprise computer processes performed in computer apparatus and computer apparatus itself, the invention also extends to computer programs, particularly computer programs on or in a carrier, adapted for putting the invention into practice. The program may be in the form of source code, object code, a code intermediate source and object code such as in partially compiled form, or in any other form suitable for use in the implementation of the processes according to the invention. The carrier be any entity or device capable of carrying the program. For example, the carrier may comprise a storage medium, such as a ROM, for example a CD ROM or a semiconductor ROM, or a magnetic recording medium, for example a floppy disk or hard disk. Further, the carrier may be a transmissible carrier such as an electrical or optical signal which may be conveyed via electrical or optical cable or by radio or other means."); 7:59–62 ("Referring to FIG. 1, a computer network is generally shown as being based around a distributed network such as the Internet 1. The present invention may however be implemented across or use other types of network, such as a LAN."); 7:64–8:1 ("The computers 2 may each be variously a personal computer, a server of any type, a PDA, mobile phone, an

interactive television, or any other device capable of loading and operating computer objects."); 8:1–4 ("An object in this sense may be a computer file, part of a file or a sub-program, macro, web page or any other piece of code to be operated by or on the computer, or any other event whether executed, emulated, simulated or interpreted."). Considered individually or as an ordered combination, the claim limitations recite nothing more than the abstract idea of receiving information, analyzing information, and outputting a result. Simply identifying an overarching desirable outcome (such as "rapid determination of the nature of the object") without specifying any technical improvements over the prior art to achieve that outcome does not rise to the level of an inventive and, thus, patent-eligible concept. *See Intell. Ventures I LLC v. Erie Indem. Co.*, 850 F.3d 1315, 1330–32 (Fed. Cir. 2017) ("The recited use of a mobile interface and pointers to retrieve user information evidences nothing more than a 'generic computer implementation' of the abstract idea that is insufficient to transform a patent-ineligible abstract idea into a patent-eligible invention."); *Intellectual Ventures I LLC v. Capital One Bank (USA)*, 792 F.3d 1363, 1367–68 (Fed. Cir. 2015) (claims directed to internet-based communications recite generic computer components and do not claim inventive concepts). Moreover, the prior art cited throughout Forcepoint's Contentions, as well as the patents themselves and the prior art cited therein, demonstrate that each claim element in every Asserted Claim is directed to well-understood, routine, and conventional computer security components and techniques. The remaining Asserted Claims merely apply those conventional and generic computer components and techniques in a selected physical or technical environment—an environment where they had already long been used by those of ordinary skill as the prior art referenced herein reflects. Thus, the Asserted Claims of the '389 Patent fail to add anything to the underlying abstract idea sufficient to transform them into patent-eligible subject matter.

Furthermore, at least under Plaintiffs' apparent infringement theory, as set forth in their Infringement Contentions, the Asserted Claims of the '389 Patent are ineligible because they would preempt the entire field of data classification based on reference data points, that is, receiving information, analyzing information, and outputting a result.

This ineligibility contention is based in whole or in part on Forcepoint's present understanding of the Asserted Claims of the '389 Patent, their current construction of the claims, and/or Plaintiffs' apparent construction of the claims in their current Infringement Contentions. Forcepoint is not adopting Plaintiffs' apparent claim construction, nor admitting to the accuracy of any particular claim construction. To the extent that Plaintiffs' apparent claim construction or applications thereof are reflected in this Contention, nothing herein should be construed as an admission that Forcepoint agrees with Plaintiffs' apparent claim construction or Plaintiffs' application of that claim construction in Plaintiffs' current Infringement Contentions. Further, claim construction is not necessary to determine that the Asserted Claims of the '389 Patent are ineligible.

Forcepoint's Contentions regarding ineligibility under 35 U.S.C. § 101 may be based on Plaintiffs' allegations of infringement. Forcepoint does not necessarily agree with the interpretations set forth in Plaintiffs' Infringement Contentions and thus this ineligibility contention is not an admission that the accused products meet any particular claim element or infringe the Asserted Claim. In addition, nothing in this ineligibility contention should be interpreted as a position about whether any portion of the Asserted Claims are limiting or not. Further, by submitting this ineligibility contention, Forcepoint does not waive and hereby expressly reserves its right to raise invalidity defenses including, but not limited, to defenses under 35 U.S.C. §§ 102, 103, and/or 112.

Discovery in this case is ongoing and, accordingly, this ineligibility contention is not to be considered final. Forcepoint reserves all rights to revise, amend, or supplement this ineligibility claim at a later date as discovery progresses, if the Court issues further claim construction rulings, or if Plaintiffs amend their Infringement Contentions.

IV. INVALIDITY CONTENTIONS FOR THE '844 PATENT

A. General State of the Art at the Time of the Alleged Inventions

The prior art references identified in these Invalidity Contentions, and the "References Cited" on the face of the '844 Patent, may provide background and context pertinent to the teachings in, and interpretation of, the prior art referenced by the attached claim charts. Forcepoint may rely upon that prior art, including the "References Cited" on the face of the '844 Patent, to demonstrate the general state of the art at the time of the alleged inventions and what one of ordinary skill in the art would have understood at a time prior to the date of the alleged invention of the Asserted Claims. This prior art is exemplary only and is not in any way intended to limit the scope of what one of ordinary skill in the art would have understood at the times of the alleged inventions. Forcepoint reserves the right to rely upon additional prior art, information, and/or knowledge to demonstrate what one of ordinary skill would have understood at any time prior to the date of alleged invention of the Asserted Claims.

B. Claim Charts

Pursuant to Section II, Paragraph 4 of the Order, the claim charts attached in Appendix A as Exhibits 844-B-1 through 844-B-31 identify where each limitation of the Asserted Claims of the '844 Patent is found in the prior art.

C. Identification of the Prior Art

Based on Plaintiffs' Preliminary Infringement Contentions and authorized supplements thereto, Forcepoint identifies prior art below and in Appendix A as Exhibits 844-B-1 through 844-

B-31, which contains charts disclosing the identity of each item of prior art that anticipates each claim and/or renders it obvious. As shown in Appendix A as Exhibits 844-B-1 through 844-B-31 and below, Forcepoint has identified each prior art reference by its number, country of origin, author, and date of issue (where applicable). Forcepoint notes that it has applied the prior art in accordance with Plaintiffs' improper assertions of infringement and improper applications of the claims. Forcepoint does not agree with Plaintiffs' application of the claims and denies infringement.

Forcepoint further contends that all claims that are anticipated by a particular reference are also rendered obvious by that same reference alone, in combination with the other references, and/or in combination with the knowledge of a person of ordinary skill in the art. Forcepoint reserves the right to rely upon any combination of the charted prior art under 35 U.S.C. § 103, yet Forcepoint has also identified exemplary obviousness combination in Section IV.E, *infra*.

'844 Patent Prior Art Patents/Patent Applications				
Ex. No.	**Patent / Publication No.**	**Country of Origin**	**Filing Date**	**Date of Issue / Publication**

Furthermore, with respect to the '844 Patent, under 35 U.S.C. §§ 102(a) and (b), Forcepoint reserves the right to identify additional prior art systems developed prior to May 12, 2015. *See, e.g.*, *Intell. Ventures II LLC v. FedEx Corp.*, No. 2:16-CV-00980-JRG, 2019 WL 1434656,

at *8–11 (E.D. Tex. Mar. 29, 2019). Discovery is ongoing, and Forcepoint reserves the right to amend the Invalidity Contentions herein based on third-party discovery.

D. Anticipation

At least under Plaintiffs' apparent infringement theory, the Asserted Claims of the '844 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by the references as set forth in the attached claim charts. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-3, 6-12, 15-20 of the '844 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Diao 535, Tahan, Cai 675, Hsu, Diao 788, Zhu, Ramzan, Cheng, Wan, Diao 466, Ideses, Masud, Schultz 926, Avasarala, and ThreatSeeker as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 17-20 of the '844 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Haq and Schultz 992 as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-3, 6-7, 9-12, 17, and 19 of the '844 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Maloof and Okano 074 as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-3, 6-7, 9-12, and 15-20 of the '844 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Moskovitch 458 as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-3, 6-12, and 15-16 of the '844 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Diao 974 as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-3, 6, 8-12, 15, 17, and 19 of the '844 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Chen 771 as set forth in the attached

claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-3, 6, 8-12, 15, 17, and 19-20 of the '844 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Diao 531 as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-3, 8-12, and 17-20 of the '844 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Menahem as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-3, 9-12, 17, and 19 of the '844 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Xuewen as set forth in the attached claim chart.

E. Obviousness

At least under Plaintiffs' apparent infringement theory, the Asserted Claims of the '844 Patent are rendered obvious by the references identified in the attached claim charts, either alone or in the combinations with other prior art references as identified below. Forcepoint contends that one of ordinary skill in the art, at the time of the alleged invention of the Asserted '844 Patent Claims, would have been motivated to combine the references disclosed herein in such a way to reach the alleged inventions. In certain instances, the suggested obviousness combinations are provided in the alternative to Forcepoint's anticipation contentions, which shall not be construed to suggest that any reference included in the combinations is not by itself anticipatory. The combinations evidencing teachings, suggestions, and/or motivations to combine the prior-art references in a way that renders the Asserted Claims obvious are merely exemplary.

ThreatSeeker	Tahan + Masud

Forcepoint reserves the right to amend these Contentions and prior art combinations in light of new information that may arise from third parties related to additional malware detection and containment systems. The following list of references are also evidence of the knowledge of POSITA at the time of the alleged invention: Fawaz, Apostolescu, Pistoia, Mahaffey, Lecerf, Tuvell, Mori, Okano 820, Jenks, Chen 907, Oliver, Diao 673, Abou-Assaleh, Arnold 2000, Aswini, Markel, Cortes, Demertzis, Firdausi, Lai, Leder, Raman, Liangboonprakong, and Tian.

One of ordinary skill in the art would be motivated to combine these references in the above combinations for at least the following reasons. One of ordinary skill in the art would have understood that each of these references are in the same field of endeavor, namely methods and devices relating to malware detection and containment. *See, e.g.*, Saxe at Abstract; Maloof at Abstract; Poulson at Abstract; Okano 074 at Abstract; Moskovitch 458 at 57; Avasarala at Abstract; Ideses at [0063]; Diao 974 at 2:21-33, 3:21-26; Chen 771 at 2:30-45; Diao 535 at 3:14-39; Diao 531 at 3:6-23; Haq at [0042]; Schultz 992 at [0021]; Hsu at 2:22-39, 3:30-42; Diao 788 at 7:33-38; Zhu at 3:44-4:7, 5:1-7; Ramzan at 2:56-65, Fig. 1; Cheng at 2:19-31; Wan at Fig. 1, 4:34-40; Xuewen at 9:42-10:43; Diao 466 at 2:34-36; Schultz 926 at Abstract; Baldangombo at Abstract; Islam 2012 at Abstract; Islam 2010 at 2; Masud at 114, 211; Tahan at 949-962; Menahem at 1483-1487; Cai 675 at [0012]; ThreatSeeker (Exhibit 844-B-30) at 26–27 (citing The Websense

ThreatSeeker Network: Leveraging Websense HoneyGrid Computing (Sep. 4, 2008) at 6, 9)); Next Generation Firewall (Exhibit 844-B-31) at 4 (citing StoneGate Firewall/VPN Common Criteria Security Target Report (Jan. 23, 2009) at 9)).

One of ordinary skill in the art would have recognized that these references are directed to addressing the same problem, in particular, improving malware detection and containment. *See, e.g.*, Saxe at Abstract; Maloof at Abstract; Poulson at Abstract; Okano 074 at Abstract; Moskovitch 458 at 57; Avasarala at Abstract; Ideses at [0063]; Diao 974 at 2:21-33, 3:21-26; Chen 771 at 2:30-45; Diao 535 at 3:14-39; Diao 531 at 3:6-23; Haq at [0042]; Schultz 992 at [0021]; Hsu at 2:22-39, 3:30-42; Diao 788 at 7:33-38; Zhu at 3:44-4:7, 5:1-7; Ramzan at 2:56-65, Fig. 1; Cheng at 2:19-31; Wan at Fig. 1, 4:34-40; Xuewen at 9:42-10:43; Diao 466 at 2:34-36; Schultz 926 at Abstract; Baldangombo at Abstract; Islam 2012 at Abstract; Islam 2010 at 2; Masud at 114, 211; Tahan at 949-962; Menahem at 1483-1487; Cai 675 at [0012]; ThreatSeeker (Exhibit 844-B-30) at 26–27 (citing The Websense ThreatSeeker Network: Leveraging Websense HoneyGrid Computing (Sep. 4, 2008) at 6, 9); Next Generation Firewall (Exhibit 844-B-31) at 4 (citing StoneGate Firewall/VPN Common Criteria Security Target Report (Jan. 23, 2009) at 9).

Further, the Asserted Claims of the ’844 Patent contain merely a duplication of concepts known in the prior art and have no patentable significance given that no unexpected results occur—*i.e.* the patentee merely combines known prior art elements according to known methods to yield predictable results. For example, the prior art references describe “computer implemented method comprising extracting a plurality of static data points from an executable file.” *See, e.g.*, Saxe at Abstract; Maloof at Abstract; Poulson at Abstract; Okano 074 at Abstract; Moskovitch 458 at 57; Avasarala at Abstract; Ideses at [0063]; Diao 974 at 2:21-33, 3:21-26; Chen 771 at 2:30-45; Diao 535 at 3:14-39; Diao 531 at 3:6-23; Haq at [0042]; Schultz 992 at [0021]; Hsu at 2:22-39, 3:30-

42; Diao 788 at 7:33-38; Zhu at 3:44-4:7, 5:1-7; Ramzan at 2:56-65, Fig. 1; Cheng at 2:19-31; Wan at Fig. 1, 4:34-40; Xuewen at 9:42-10:43; Diao 466 at 2:34-36; Schultz 926 at Abstract; Baldangombo at Abstract; Islam 2012 at Abstract; Islam 2010 at 2; Masud at 114, 211; Tahan at 949-962; Menahem at 1483-1487; Cai 675 at [0012]; ThreatSeeker (Exhibit 844-B-30) at 5–7 (citing The Websense ThreatSeeker Network: Leveraging Websense HoneyGrid Computing (Sep. 4, 2008) at 2, 9; The Web Isn't Fun Anymore: How Websense Technology Protects Against Internet-Based Threats (Aug. 1, 2007) at 4; Websense Product Overview (Jan. 10, 2007) at 4; Websense Email Security Suite: DataSheet (Sept. 16, 2008) at 2; Websense Enterprise V6.2 and Web Security Suites "Aries" Requirements Document (May 01, 2005) at 6); Next Generation Firewall (Exhibit 844-B-31) at 5–6 (citing StoneGate Firewall/VPN Common Criteria Security Target Report (Jan. 23, 2009) at 10; StoneGate 5.1: Firewall/VPN Reference Guide (Jan. 13, 2010) at 20; The Evolution to the Next Generation Firewall: Meeting Today's Critical Enterprise Network Demands (Feb. 22, 2010) at 10). The prior art references further describe "generating a feature vector from the plurality of static data points using a classifier trained to classify the plurality of static data points based on a collection of data comprising known malicious executable files, known benign executable files, and known unwanted executable files." *See, e.g.*, Saxe at 5:20-44; Maloof at [0054]-[0055]; Poulson at [0024]; Okano 074 at [0090]-[0091]; Moskovitch 458 at [0021]; Avasarala at [0050]; Ideses at [0044]; Diao 974 at 4:8-14; Chen 771 at 3:31-43; Diao 535 at 3:14-39; Diao 531 at 4:1-24; Haq at [0086]; Schultz 992 at [0042]; Hsu at 3:30-42, 3:30-42; Diao 788 at 9:33-37; Zhu at 4:24-48; Ramzan at 9:25-30; Cheng at 4:60-5:6; Wan at 5:27-45; Xuewen at 5:15-19; Diao 466 at 4:44-54; Schultz 926 at [0039]; Baldangombo at 11-12; Islam 2012 at Abstract; Islam 2010 at 6-7; Masud at 206; Tahan at 951; Menahem at 1483; Cai 675 at [0018]; ThreatSeeker (Exhibit 844-B-30) at 8–10 (citing The Websense ThreatSeeker Network:

Leveraging Websense HoneyGrid Computing (Sep. 4, 2008) at 8, 10–11; The Web Isn't Fun Anymore: How Websense Technology Protects Against Internet-Based Threats (Aug. 1, 2007) at 3; Websense Product Overview (Jan. 10, 2007) at 3); Next Generation Firewall (Exhibit 844-B-31) at 6–7 (citing StoneGate 5.1: Firewall/VPN Reference Guide (Jan. 13, 2010) at 112; StoneGate Firewall/VPN Common Criteria Security Target Report (Jan. 23, 2009) at 17, 21). The prior art references further describe "wherein the collection of data comprises at least a portion of the plurality of static data points". *See, e.g.,* Saxe at 10:4-16; Maloof at [0040]; Poulson at [0043]-[0047]; Okano 074 at [0092]-[0094]; Moskovitch 458 at [0043]; Avasarala at [0050]; Ideses at [0080]-[0085]; Diao 974 at 4:8-14; Chen 771 at 3:31-43; Diao 535 at 4:34-41; Diao 531 at 3:24-34; Haq at [0024]; Schultz 992 at [0020]; Hsu at 3:30-42; Diao 788 at 5:26-35; Zhu at 5:1-7; Ramzan at 9:25-30; Cheng at 3:45-67; Wan at 4:34-40; Xuewen at 5:49-65; Diao 466 at 6:22-24; Schultz 926 at [0042]; Baldangombo at 5; Islam 2012 at Abstract; Islam 2010 at 4-5; Masud at 206; Tahan at 955; Menahem at 1484; Cai 675 at [0012]; ThreatSeeker (Exhibit 844-B-30) at 3–7 (citing Websense Express (June 28, 2007) at 2; Websense Product Overview (Jan. 10, 2007) at 2; Websense Enterprise V6.2 and Web Security Suites "Aries" Requirements Document (May 01, 2005) at 6; The Websense ThreatSeeker Network: Leveraging Websense HoneyGrid Computing (Sep. 4, 2008) at 9); Next Generation Firewall (Exhibit 844-B-31) at 3–5 (citing StoneGate 5.1: Firewall/VPN Reference Guide (Jan. 13, 2010) at 20, 26; The Evolution to the Next Generation Firewall: Meeting Today's Critical Enterprise Network Demands (Feb. 22, 2010) at 10).

Other examples of these concepts are cited in the attached charts for the above references. *See* Exs. 844-B-1 through 844-B-31. It would have been known and simple to take a prior art for malware detection and neutralization by analyzing feature vectors to determine whether a file is

harmful, and it would have been obvious to a POSITA to try this. *Id.* It would have also yielded predictable results in the context of improving malware detection and containment. *Id.*

Forcepoint is not aware of any secondary considerations supporting non-obviousness of the '844 Patent claims. To the extent Plaintiffs seek to introduce any alleged secondary considerations in the future, Forcepoint reserves the right to respond at that time.

F. Invalidity Under Section 112

Pursuant to Section II, Paragraph 4 of the Order, Forcepoint provides an identification of the limitations of the '844 Patent that are invalid based on indefiniteness under 35 U.S.C. § 112(b), or enablement or written description under 35 U.S.C. § 112(a). These Contentions are being proffered without the full benefit of expert disclosure or discovery.

Asserted Claims 1-3, 6-12, and 15-20 of the '844 Patent (and all claims which depend from these claims) are indefinite, and thus invalid. "[A] patent is invalid for indefiniteness if its claims, read in light of the specification delineating the patent, and the prosecution history, fail to inform, with reasonable certainty, those skilled in the art about the scope of the invention." *Nautilus, Inc. v. Biosig Instruments, Inc.*, 572 U.S. 898, 901 (2014). For example, as applied in Plaintiffs' Infringement Contentions, the terms "at least a portion of the plurality"; "features . . . selectively turned on or off"; "support vector processing"; "type of data"; "encoding the extracted static data points" / "encoding the extracted plurality of predefined character strings"; "selectively setting features of the classifier"; "determined probability value" / "probability value"; "predetermined false positive range data"; "exceeds a threshold value"; "generating a feature vector from the plurality of static data points using a classifier trained to classify the plurality of static data points based on a collection of data comprising known malicious executable files, known benign executable files[,] and known unwanted executable files" / "generating a feature vector from the plurality of predefined character strings using a classifier trained to classify the plurality of

predefined character strings based on a collection of data comprising known malicious executable files, known benign executable files and known unwanted executable files"; "classifier" / "classifier trained to classify the plurality of static data points based on a collection of data comprising known malicious executable files, known benign executable files[,] and known unwanted executable files" / "classifier trained to classify the plurality of predefined character strings based on a collection of data comprising known malicious executable files, known benign executable files and known unwanted executable files"; "one or more features of the feature vector are selectively turned on or off based on whether a value of one or more static data points from the plurality of extracted static data points is within a predetermined range"; "static data points" which "represent predefined character strings in the executable file"; "harmful"; "threshold value"; "predetermined false positive range"; "machine learning technique"; "plurality of static data points is extracted using a machine learning technique"; and "at least one processor operatively connected with the memory and configured to perform operation of: extracting a plurality of predefined character strings from an executable file without decrypting or unpacking the executable file; generating a feature vector from the plurality of predefined character strings using a classifier trained to classify the plurality of predefined character strings based on a collection of data comprising known malicious executable files, known benign executable files and known unwanted executable files, wherein the collection of data comprises at least a portion of one or more of the plurality of predefined character strings, and wherein one or more features of the feature vector are selectively turned on or off based on whether a value of one or more predefined character strings from the plurality of predefined character strings is within a predetermined range; and evaluating the feature vector using support vector processing to determine whether the executable file is harmful" are indefinite because each of these phrases not only is subjective but also does

not have a meaning that can be clearly determined from the patent, and thus fails to put the public on notice of what is and is not covered by these claims.

Asserted Claims 1-3, 6-12, and 15-20 of the '844 Patent are invalid under § 112(a), because the specification as filed does not contain a sufficient written description supporting those claims. In particular, the patent disclosure would not lead a person of ordinary skill in the art to understand that the named inventor had possession of the purported inventions as claimed and in view of Plaintiffs' contentions. For example, Asserted Claims 1-3, 6-12, and 15-20 (and all claims that depend from these claims) fail to satisfy the requirements of 35 U.S.C. § 112 for at least the following reasons: the '844 Patent fails to provide an adequate written description of the phrases "extracting a plurality"; "at least a portion of the plurality"; "features . . . selectively turned on or off"; "predetermined range" / "predetermined false positive range"; "support vector processing"; "selectively setting features of the classifier"; "determined probability value" / "probability value"; "predetermined false positive range data"; "extracting a plurality of static data points" where "the plurality of static data points represent predefined character strings in the executable file"; "predefined character strings"; "generating a feature vector from the plurality of static data points using a classifier trained to classify the plurality of static data points based on a collection of data comprising known malicious executable files, known benign executable files[,] and known unwanted executable files" / "generating a feature vector from the plurality of predefined character strings using a classifier trained to classify the plurality of predefined character strings based on a collection of data comprising known malicious executable files, known benign executable files and known unwanted executable files"; "classifier" / "classifier trained to classify the plurality of static data points based on a collection of data comprising known malicious executable files, known benign executable files[,] and known unwanted executable files" / "classifier trained to

classify the plurality of predefined character strings based on a collection of data comprising known malicious executable files, known benign executable files and known unwanted executable files"; "one or more features of the feature vector are selectively turned on or off based on whether a value of one or more static data points from the plurality of extracted static data points is within a predetermined range"; "determine[ing] whether the executable file is harmful" or "a determination of whether the executable file is harmful"; "encoding the extracted static data points for the classifier based on the classification"; "wherein the plurality of static data points is extracted using a machine learning technique"; "plurality of static data points is extracted using a machine learning technique"; and "at least one processor operatively connected with the memory and configured to perform operation of: extracting a plurality of predefined character strings from an executable file without decrypting or unpacking the executable file; generating a feature vector from the plurality of predefined character strings using a classifier trained to classify the plurality of predefined character strings based on a collection of data comprising known malicious executable files, known benign executable files and known unwanted executable files, wherein the collection of data comprises at least a portion of one or more of the plurality of predefined character strings, and wherein one or more features of the feature vector are selectively turned on or off based on whether a value of one or more predefined character strings from the plurality of predefined character strings is within a predetermined range; and evaluating the feature vector using support vector processing to determine whether the executable file is harmful" as applied in Plaintiffs' Infringement Contentions.

The aforementioned claims are invalid because they are not enabled or described by the specification of the '844 Patent. The subject matter of these claims, as described above, are not sufficiently shown in the specification of the '844 Patent. The subject matter of these claims, as

described above, are not sufficiently enabled because they do not teach one skilled in the art how to make and use the alleged invention from the specification of the '844 Patent. For example, the '844 Patent fails to enable the following and thus, Asserted Claims 1-3, 6-12, and 15-20 of the '844 Patent are invalid: "extracting a plurality"; "at least a portion of the plurality"; "features . . . selectively turned on or off"; "predetermined range" / "predetermined false positive range"; "support vector processing"; "selectively setting features of the classifier"; "determined probability value" / "probability value"; "predetermined false positive range data"; "extracting a plurality of static data points" where "the plurality of static data points represent predefined character strings in the executable file"; "predefined character strings"; "generating a feature vector from the plurality of static data points using a classifier trained to classify the plurality of static data points based on a collection of data comprising known malicious executable files, known benign executable files[,] and known unwanted executable files" / "generating a feature vector from the plurality of predefined character strings using a classifier trained to classify the plurality of predefined character strings based on a collection of data comprising known malicious executable files, known benign executable files and known unwanted executable files"; "classifier" / "classifier trained to classify the plurality of static data points based on a collection of data comprising known malicious executable files, known benign executable files[,] and known unwanted executable files" / "classifier trained to classify the plurality of predefined character strings based on a collection of data comprising known malicious executable files, known benign executable files and known unwanted executable files"; "one or more features of the feature vector are selectively turned on or off based on whether a value of one or more static data points from the plurality of extracted static data points is within a predetermined range"; "determine[ing] whether the executable file is harmful" or "a determination of whether the executable file is harmful";

"encoding the extracted static data points for the classifier based on the classification"; "wherein the plurality of static data points is extracted using a machine learning technique"; "plurality of static data points is extracted using a machine learning technique"; and "at least one processor operatively connected with the memory and configured to perform operation of: extracting a plurality of predefined character strings from an executable file without decrypting or unpacking the executable file; generating a feature vector from the plurality of predefined character strings using a classifier trained to classify the plurality of predefined character strings based on a collection of data comprising known malicious executable files, known benign executable files and known unwanted executable files, wherein the collection of data comprises at least a portion of one or more of the plurality of predefined character strings, and wherein one or more features of the feature vector are selectively turned on or off based on whether a value of one or more predefined character strings from the plurality of predefined character strings is within a predetermined range; and evaluating the feature vector using support vector processing to determine whether the executable file is harmful." The foregoing phrases are not described in such a way that one of ordinary skill in the art could implement it to achieve the results sought by the individual named on the face of the '844 Patent as the inventor. The foregoing phrases are not described in such a way that a person having ordinary skill in the art at the time of the alleged invention would have understood that the individual named as the inventor on the face of the '844 Patent was in possession of the claimed subject matter. The Asserted Claims of the '844 Patent also do not comply with § 112 because they do not set forth what the applicant regards is the invention.

A more detailed basis for the above indefiniteness, written description, and enablement defenses may be set forth in any expert report(s) on invalidity to be served on Plaintiffs in accordance with the Court's Scheduling Order.

G. Invalidity Under Section 101

Pursuant to Section II, Paragraph 4 of the Order, Forcepoint provides an identification of the claims of the '844 Patent they contend are directed to ineligible subject matter under 35 U.S.C. § 101. These Contentions are being proffered without expert disclosure or discovery.

Each Asserted Claim of the '844 Patent is directed to ineligible subject matter under 35 U.S.C. § 101. First, the Asserted Patent Claims of the '844 Patent are directed to the abstract idea of mathematical classification using machine learning. *See, e.g.*, '844 Patent, claim 1 ("generating a feature vector from the plurality of static data points using a classifier trained to classify the plurality of static data points based on a collection of data comprising known malicious executable files, known benign executable files, and known unwanted executable files," "features of the feature vector are selectively turned on or off based on whether a value of one or more static data points . . . is within a predetermined range," "evaluating the feature vector using support vector processing to determine whether the executable file is harmful"); claim 10 ("generating a feature vector from the plurality of static data points using a classifier trained to classify the plurality of static data points based on a collection of data comprising known malicious executable files, known benign executable files and known unwanted executable files," "features of the feature vector are selectively turned on or off based on whether one or more values of one or more static data points . . . is within a predetermined range," "evaluating the feature vector using support vector processing to determine whether the executable file is harmful"); claim 17 ("generating a feature vector from the plurality of predefined character strings using a classifier trained to classify the plurality of predefined character strings based on a collection of data comprising known

malicious executable files, known benign executable files and known unwanted executable files," "features of the feature vector are selectively turned on or off based on whether a value of one or more predefined character strings . . . is within a predetermined range," "evaluating the feature vector using support vector processing to determine whether the executable file is harmful"). The specification of the '844 confirms that the Asserted Claims are directed to basic concepts of mathematical classification using machine learning. *See, e.g.*, *id.*, 1:20–34 ("Aspects of the present disclosure relate to threat detection of executable files. . . . Analyzing of the executable file comprises applying a classifier to the plurality of static data points extracted from the executable file. The classifier is trained from data comprising known malicious executable files, known benign executable files and potentially unwanted executable files. Based upon the analysis of the executable file, a determination is made as to whether the executable file is harmful. In some examples, execution of the executable file is prevented when a determined probability value that the executable file is harmful exceeds a threshold value."); 2:4–14 ("The present disclosure is able to detect whether an executable file is harmful or benign before the executable file is actually executed on a processing device. In examples, machine learning processing applies a classifier to evaluate an executable file based on static points data collected from the executable file. The classifier is trained from a collection of data comprising known malicious files, potentially unwanted files and benign files. The classifier is designed and trained such that it can handle encrypted and/or compressed files without decrypting and/or decompressing the files."); 2:28–45 ("The determination of unknown files is achieved by evaluating static data points extracted from an executable file using a trained classification system that is able to identify potential threats without analyzing executable behavior of a file. The present disclosure also provides for the creation of a training set that adaptively learns what static data points may indicate the existence

of malicious code using training data that contains a statistically significant number of both encrypted and non-encrypted examples of malicious or unwanted executable files, among other information. By collecting a large set of training examples as they appear as publicly available and distributed over network connection (e.g., "in the wild"), the present disclosure ensures that its adaptive learning processing is robust enough to comprise sufficient representation of features (and distributions) from files that may be encrypted, not-encrypted, compressed, and uncompressed, among other examples."); 2:51-52 ("ability to adapt over time").

Second, the Asserted Claims of the '844 Patent do not contain any inventive concept as they combine standard, generic, and well-known components in a conventional way to arrive at the claimed invention. The '844 Patent describes performing mathematical classification using machine learning using conventional hardware and software components, computing devices, servers, storage components, and networks. *See, e.g.*, *id.*, 2:58–3:3 ("Components of the systems may be hardware components or software implemented on and/or executed by hardware components of the systems. In examples, system 100 may include any of hardware components (e.g., used to execute/run operating system (OS)), and software components (e.g., applications, application programming interfaces, modules, virtual machines, runtime libraries, etc.) running on hardware."); 3:9–14 ("For instance, threat detection operations (e.g., application, instructions, modules, etc.) may be run on a processing device such as a computer, a client device (e.g., mobile processing device, laptop, smartphone/phone, tablet, etc.) and/or any other electronic devices, where the components of the system may be executed on the processing device."); 3:15–22 ("[F]iles to be evaluated may be present on a client device and information may be processed or accessed from other devices in a network such as, for example, one or more server devices that may be used to perform threat detection processing and/or evaluation a file before execution of the

file by the client device."); 3:46–52 ("Knowledge component 102 described herein may collect data for use in building, training and/or re-training a learning classifier to evaluate executable files. The knowledge component 102 is one or more storages, memories, and/or modules that continuously collects and manages data that may be used to detect threats in files such as executable files."); 14:1–13 ("FIG. 4 illustrates one example of a suitable operating environment 400 in which one or more of the present embodiments may be implemented. This is only one example of a suitable operating environment and is not intended to suggest any limitation as to the scope of use or functionality. Other well-known computing systems, environments, and/or configurations that may be suitable for use include, but are not limited to, personal computers, server computers, hand-held or laptop devices, multiprocessor systems, microprocessor-based systems, programmable consumer electronics such as smart phones, network PCs, minicomputers, mainframe computers, distributed computing environments that include any of the above systems or devices, and the like."). Considered individually or as an ordered combination, the claim limitations recite nothing more than the abstract idea of mathematical classification using machine learning. Simply identifying an overarching desirable outcome (such as "high and accurate classification rates" or "enhanced security protection") without specifying any technical improvements over the prior art to achieve that outcome does not rise to the level of an inventive and, thus, patent-eligible concept. *See Intell. Ventures I LLC v. Erie Indem. Co.*, 850 F.3d 1315, 1330–32 (Fed. Cir. 2017) ("The recited use of a mobile interface and pointers to retrieve user information evidences nothing more than a 'generic computer implementation' of the abstract idea that is insufficient to transform a patent-ineligible abstract idea into a patent-eligible invention."); *Intellectual Ventures I LLC v. Capital One Bank (USA)*, 792 F.3d 1363, 1367–68 (Fed. Cir. 2015) (claims directed to internet-based communications recite generic computer components and do not

claim inventive concepts). Moreover, the prior art cited throughout Forcepoint's Contentions, as well as the patents themselves and the prior art cited therein, demonstrate that each claim element in every Asserted Claim is directed to well-understood, routine, and conventional computer security components and techniques. The remaining Asserted Claims merely apply those conventional and generic computer components and techniques in a selected physical or technical environment—an environment where they had already long been used by those of ordinary skill as the prior art referenced herein reflects. Thus, the Asserted Claims of the '844 Patent fail to add anything to the underlying abstract idea sufficient to transform them into patent-eligible subject matter.

Furthermore, at least under Plaintiffs' apparent infringement theory, as set forth in their Infringement Contentions, the Asserted Claims of the '844 Patent are ineligible because they would preempt the entire field of mathematical classification using machine learning.

This ineligibility contention is based in whole or in part on Forcepoint's present understanding of the Asserted Claims of the '844 Patent, their current construction of the claims, and/or Plaintiffs' apparent construction of the claims in their current Infringement Contentions. Forcepoint is not adopting Plaintiffs' apparent claim construction, nor admitting to the accuracy of any particular claim construction. To the extent that Plaintiffs' apparent claim construction or applications thereof are reflected in this Contention, nothing herein should be construed as an admission that Forcepoint agrees with Plaintiffs' apparent claim construction or Plaintiffs' application of that claim construction in Plaintiffs' current Infringement Contentions. Further, claim construction is not necessary to determine that the Asserted Claims of the '844 Patent are ineligible.

Forcepoint's Contentions regarding ineligibility under 35 U.S.C. § 101 may be based on Plaintiffs' allegations of infringement. Forcepoint does not necessarily agree with the interpretations set forth in Plaintiffs' Infringement Contentions and thus this ineligibility contention is not an admission that the accused products meet any particular claim element or infringe the Asserted Claim. In addition, nothing in this ineligibility contention should be interpreted as a position about whether any portion of the Asserted Claims are limiting or not. Further, by submitting this ineligibility contention, Forcepoint does not waive and hereby expressly reserves its right to raise invalidity defenses including, but not limited, to defenses under 35 U.S.C. §§ 102, 103, and/or 112.

Discovery in this case is ongoing and, accordingly, this ineligibility contention is not to be considered final. Forcepoint reserves all rights to revise, amend, or supplement this ineligibility claim at a later date as discovery progresses, if the Court issues further claim construction rulings, or if Plaintiffs amend their Infringement Contentions.

V. INVALIDITY CONTENTIONS FOR THE '721 PATENT

A. General State of the Art at the Time of the Alleged Inventions

The prior art references identified in these Invalidity Contentions, and the "References Cited" on the face of the '721 Patent, may provide background and context pertinent to the teachings in, and interpretation of, the prior art referenced by the attached claim charts. Forcepoint may rely upon that prior art, including the "References Cited" on the face of the '721 Patent, to demonstrate the general state of the art at the time of the alleged inventions and what one of ordinary skill in the art would have understood at a time prior to the date of the alleged invention of the Asserted Claims. This prior art is exemplary only and is not in any way intended to limit the scope of what one of ordinary skill in the art would have understood at the times of the alleged inventions. Forcepoint reserves the right to rely upon additional prior art, information, and/or

knowledge to demonstrate what one of ordinary skill would have understood at any time prior to the date of alleged invention of the Asserted Claims.

B. Claim Charts

Pursuant to Section II, Paragraph 4 of the Order, the claim charts attached in Appendix A as Exhibits 721-C-1 through 721-C-20 identify where each limitation of the Asserted Claims of the '721 Patent is found in the prior art.

C. Identification of the Prior Art

Based on Plaintiffs' Preliminary Infringement Contentions and authorized supplements thereto, Forcepoint identifies prior art below and in Appendix A as Exhibits 721-C-1 through 721-C-20, which contains charts disclosing the identity of each item of prior art that anticipates each claim and/or renders it obvious. As shown in Appendix A as Exhibits 721-C-1 through 721-C-20 and below, Forcepoint has identified each prior art reference by its number, country of origin, author, and date of issue (where applicable). Forcepoint notes that it has applied the prior art in accordance with Plaintiffs' improper assertions of infringement and improper applications of the claims. Forcepoint does not agree with Plaintiffs' application of the claims and denies infringement.

Forcepoint further contends that all claims that are anticipated by a particular reference are also rendered obvious by that same reference alone, in combination with the other references, and/or in combination with the knowledge of a person of ordinary skill in the art. Forcepoint reserves the right to rely upon any combination of the charted prior art under 35 U.S.C. § 103, yet Forcepoint has also identified exemplary obviousness combination in Section V.E, *infra*.

'721 Patent Prior Art Patents/Patent Applications				
Ex. No.	**Patent / Publication No.**	**Country of Origin**	**Filing Date**	**Date of Issue / Publication**
Ex. 721-C-1	U.S. Patent No. 6,772,346 ("Chess")	U.S.	Jul. 16, 1999	Aug. 3, 2004
Ex. 721-C-2	U.S. Patent No. 7,055,008 ("Niles")	U.S.	Jan. 22, 2003	May 30, 2006
Ex. 721-C-3	U.S. Patent No. 8,286,239 ("Sutton")	U.S.	Jul. 24, 2008	Oct. 9, 2012
Ex. 721-C-4	U.S. Patent No. 8,607,066 ("Kailash 066")	U.S.	Aug. 4, 2008	Dec. 10, 2013
Ex. 721-C-5	U.S. Patent No. 9,152,789 ("Natarajan")	U.S.	Mar. 26, 2014	Oct. 6, 2015
Ex. 721-C-6	U.S. Patent No. 10,262,136 ("Kailash 136")	U.S.	Aug. 4, 2008	Apr. 16, 2019
Ex. 721-C-7	U.S. Patent No. 8,881,283 ("Tuvell 283")	U.S.	Oct. 9, 2007	Apr. 10, 2008
Ex. 721-C-8	U.S. Patent Publication No. 2007/0022315 ("Comegys")	U.S.	Jun. 22, 2006	Jan. 25, 2007
Ex. 721-C-9	U.S. Patent Publication No. 2005/0262560 ("Gassoway")	U.S.	May 5, 2004	Nov. 24, 2005
Ex. 721-C-10	U.S. Patent Publication No. 2008/0010368 ("Hubbard 368")	U.S.	July 10, 2006	Jan. 10, 2008
Ex. 721-C-11	U.S. Patent Publication No. 2005/0223001 ("Kester 001")	U.S.	Jun. 1, 2005	Oct. 5, 2005
Ex. 721-C-12	U.S. Patent Publication No. 2006/0075504 ("Liu")	U.S.	Sept. 22, 2005	Apr. 6, 2006
Ex. 721-C-13	U.S. Patent Publication No. 2013/0091570 ("McCorkendale")	U.S.	Sept. 15, 2009	Apr. 10, 2013
Ex. 721-C-14	U.S. Patent No. 8,429,180 ("Sobel")	U.S.	Mar. 31, 2008	Apr. 23, 2013
Ex. 721-C-15	U.S. Patent No. 8,650,648 ("Fraser")	U.S.	Mar. 26, 2008	Feb. 11, 2014
Ex. 721-C-16	U.S. Patent No. 7,774,845 ("Shipman")	U.S.	Nov. 6, 2002	Aug. 10, 2010

’721 Patent Prior Art Patents/Patent Applications				
Ex. No.	**Patent / Publication No.**	**Country of Origin**	**Filing Date**	**Date of Issue / Publication**
Ex. 721-C-17	U.S. Patent No. 8,365,286 (“Poston”)	U.S.	Mar. 30, 2009	Jan. 29, 2013

’721 Patent Prior Art Systems	
Ex. No.	**System**
Ex. 721-C-18	Websense Email and Web Security
Ex. 721-C-19	Websense ThreatSeeker (“ThreatSeeker”)
Ex. 721-C-20	Stonesoft StoneGate Next Generation Firewall (“Next Generation Firewall”)
	System and/or product art received pursuant to Forcepoint’s subpoena to Sophos Ltd. (dated October 31, 2023)

’721 Patent Additional Prior Art/Background Art
U.S. Patent No. 6,944,772 B2 (“Dozortsev”)
U.S. Patent No. 7,093,239 B1 (“van der Made”)
U.S. Patent No. 7,310,817 B2 (“Hinchliffe”)

Nick Del Grosso, *It’s Time to Rethink your Corporate Malware Strategy*, SANS INSTITUTE, Feb. 24, 2002. (“Del Grosso”)
Ajith Abraham et al., *D-SCIDS: Distributed soft computing intrusion detection system*, 30, JOURNAL OF NETWORK AND COMPUTER APPLICATIONS, 2007 at 81. (“Abraham”)

'721 Patent Additional Prior Art/Background Art
Joel Scanlan et al., *Intrusion Detection by Intelligent analysis of data across multiple gateways in real-time*, School of Computing, University of Tasmania. ("Scanlan")
Xiao Jiang et al,, *A Malware Sample Capturing and Tracking System*, IEEE, Dec. 19, 2010 at 69. ("Jiang")
Brijesh Kumar & Constantine Katsinis, *A Network Based Approach to Malware Detection in Large IT Infrastructures*, IEEE, Jul. 17, 2010 at 188. ("Kumar")
Shuaifu Dai et al., *Behavior-Based Malware Detection on Mobile Phone*, IEEE, Sep. 25, 2010 at 1. ("Dai")

Furthermore, with respect to the '721 Patent, under pre-AIA 35 U.S.C. § 102(f), Forcepoint identifies the activities of entities involved in computer security as referenced in Provisional Application No. 61/443,095, to which Plaintiffs claim priority. *See, e.g.*, Provisional Application No. 61/443,095 at [0002]-[0006].

Furthermore, with respect to the '721 Patent, under pre-AIA 35 U.S.C. §§ 102(a), (b), and (g)(2), Forcepoint reserves the right to identify additional prior art systems developed prior to February 15, 2011. *See, e.g.*, *Intell. Ventures II LLC v. FedEx Corp.*, No. 2:16-CV-00980-JRG, 2019 WL 1434656, at *8-11 (E.D. Tex. Mar. 29, 2019). Discovery is ongoing, and Forcepoint reserves the right to amend the Invalidity Contentions herein based on third-party discovery.

D. Anticipation

At least under Plaintiffs' apparent infringement theory, the Asserted Claims of the '721 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by the references as set forth in the attached claim charts. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1, 8, 9, 14, and 15 of the '721 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Niles, Sutton, Kailash 066, and Natarajan as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1, 9, 14, and 15 of the '721 Patent are anticipated,

either expressly or inherently as understood by a person having ordinary skill in the art, by Gassoway as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1, 8, and 9 of the '721 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Kester 001 and Shipman as set forth in the attached claim chart.

E. Obviousness

At least under Plaintiffs' apparent infringement theory, the Asserted Claims of the '721 Patent are rendered obvious by the references identified in the attached claim charts, either alone or in the combinations with other prior art references as identified below. Forcepoint contends that one of ordinary skill in the art, at the time of the alleged invention of the Asserted '721 Patent Claims, would have been motivated to combine the references disclosed herein in such a way to reach the alleged inventions. In certain instances, the suggested obviousness combinations are provided in the alternative to Forcepoint's anticipation contentions, which shall not be construed to suggest that any reference included in the combinations is not by itself anticipatory. The combinations evidencing teachings, suggestions, and/or motivations to combine the prior-art references in a way that renders the Asserted Claims obvious are merely exemplary.

Forcepoint reserves the right to amend these Contentions and prior art combinations in light of new information that may arise from third parties related to additional computer security systems. The following list of references are also evidence of the knowledge of POSITA at the time of the alleged invention: Dozortsey, van der Made, Hinchliffe, Kirby, Chaudhry, Sarathy, Forristal, McDougal, Kailash 581, Yang, Kester 340, Blumfield, Bhargava, Hypponen, Kuo, Shukla, Ferrand, Madhok 266 A2, Madhok 266 A3, Curnyn, Del Gross, Abraham, Scanlan, Jiang, Kumar, and Dai.

One of ordinary skill in the art would be motivated to combine these references in the above combinations for at least the following reasons. One of ordinary skill in the art would have understood that each of these references are in the same field of endeavor, namely methods and devices relating to computer security. *See, e.g.*, Chess at 5:57-62; Comegys at [0008]; Kailash 066 at 2:32-38; Kailash 136 at 10:61-64; Natarajan at 3:26-29; Niles at 3:56-4:11; Sutton at 1:46-49; Tuvell 283 at 2:27-32; Gassoway at Abstract; Hubbard 368 at Abstract; Kester 001 at Claim 1; Liu at Abstract; McCorkendale at [0002]; Sobel at 1:6-10; Shipman at Abstract; Fraser at 6:17-46; Poston at 2:40-44; and Websense Email and Web Security (Exhibit 721-C-18) at 11 (citing Websense Unveils TRITON Architecture Unifying Web, Data and Email Security at 1); ThreatSeeker (Exhibit 721-C-19) at 3 (citing Datasheet - Websense Web Security Suite 2007.pdf at 1); and Next Generation Firewall (Exhibit 721-C-20) at 5 (citing Brochure_2001.pdf at 4).

One of ordinary skill in the art would have recognized that these references are directed to addressing the same problem, in particular, improving computer security. *See, e.g.*, Chess at 5:57-62; Comegys at [0008]; Kailash 066 at 2:32-38; Kailash 136 at 10:61-64; Natarajan at 3:26-29;

Niles at 3:56-4:11; Sutton at 1:46-49; Tuvell 283 at 2:27-32; Gassoway at Abstract; Hubbard 368 at Abstract; Kester 001 at Claim 1; Liu at Abstract; McCorkendale at Abstract; Sobel at Abstract, Shipman at Abstract; Fraser at 6:17-46; Poston at 2:40-44; and Websense Email and Web Security (Exhibit 721-C-18) at 11 (citing Websense Unveils TRITON Architecture Unifying Web, Data and Email Security at 1); ThreatSeeker (Exhibit 721-C-19) at 3 (citing Datasheet - Websense Web Security Suite 2007.pdf at 1); and Next Generation Firewall (Exhibit 721-C-20) at 5 (citing Brochure_2001.pdf at 4).

Further, the Asserted Claims of the '721 Patent contain merely a duplication of concepts known in the prior art and have no patentable significance given that no unexpected results occur—*i.e.* the patentee merely combines known prior art elements according to known methods to yield predictable results. For example, the prior art references describe a "method of classifying a computer object as malware." *See, e.g.*, Chess at 5:57-62; Comegys at [0008]; Kailash 066 at 2:54-56; Kailash 136 at 10:61-64; Natarajan at 3:26-29; Niles at 3:56-4:11; Sutton at claim 12; Tuvell 283 at 2:27-32; Gassoway at Abstract; Hubbard 368 at Abstract; Kester 001 at Claim 1; Liu at Abstract; McCorkendale at Abstract; Sobel at Abstract; Shipman at Abstract; Fraser at 6:17-46; Poston at 8:24-29; and Websense Email and Web Security (Exhibit 721-C-18) at 11 (citing Websense Unveils TRITON Architecture Unifying Web, Data and Email Security at 1); ThreatSeeker (Exhibit 721-C-19) at 3 (citing Datasheet - Websense Web Security Suite 2007.pdf at 1); and Next Generation Firewall (Exhibit 721-C-20) at 5 (citing Brochure_2001.pdf at 4).

The prior art references further describe a "system for classifying a computer object as malware." *See, e.g.*, Chess at 5:57-62; Comegys at [0008]; Kailash 066 at 2:32-38; Kailash 136 at 10:61-64; Natarajan at 3:26-29; Niles at 9:23-38; Sutton at 1:22-28; Tuvell 283 at 2:27-32; Gassoway at Abstract; Hubbard 368 at Abstract; Kester 001 at Claim 1; Liu at Abstract;

McCorkendale at Abstract; Sobel at Abstract; Shipman at Abstract; Fraser at 6:17-46; Poston at 2:40-44; and Websense Email and Web Security (Exhibit 721-C-18) at 103 (citing Websense Unveils TRITON Architecture Unifying Web, Data and Email Security at 1); ThreatSeeker (Exhibit 721-C-19) at 48 (citing Computer security blanket Websense _s ThreatSeeker technology aimed at sniffing out malicious sites.pdf at 1); and Next Generation Firewall (Exhibit 721-C-20) at 113 (citing Brochure_2001.pdf at 4).

The prior art references further describe "receiving, at a first threat server, details of a first computer object from a first remote computer, wherein the details of the first computer object include data uniquely identifying the first computer object." *See, e.g.*, Chess at 4:66-5:17; Comegys at [0029]; Kailash 066 at 15:37-46; Kailash 136 at 3:45-51; Natarajan at 5:44-48; Niles at 5:30-42; Sutton at 3:12-21; Tuvell 283 at 5:56-62; Gassoway at [0030]; Hubbard 368 at [0037]; Kester 001 at [0048]-[0049]; Liu at [0083]; McCorkendale at [0025]; Sobel at 4:4-21; Shipman at 6:41-61; Fraser at 11:47-12:10; Poston at 4:55-5:9; and Websense Email and Web Security (Exhibit 721-C-18) at 18-20 (citing mass-spam-url-classification-project.doc at 6 and 9); ThreatSeeker (Exhibit 721-C-19) at 5-6 (citing White Paper - Websense Threatseeker Network 2008.pdf at 6); and Next Generation Firewall (Exhibit 721-C-20) at 13 (citing Stonesoft StoneGate NextGen Firewall - whitepaper 2010.pdf at 10).

The prior art references further describe "a first threat server arranged to receive details of a computer object from a first remote computer, wherein the details of the first computer object include data uniquely identifying the first computer object." *See, e.g.*, Chess at 4:66-5:17; Comegys at [0029]; Kailash 066 at 15:37-46; Kailash 136 at 3:45-51; Natarajan at 5:44-48; Niles at 5:30-42; Sutton at 3:12-21; Tuvell 283 at 5:56-62; Gassoway at [0030]; Hubbard 368 at [0037]; Kester 001 at [0048]-[0049]; Liu at [0083]; McCorkendale at [0025]; Sobel at 4:4-21; Shipman at

6:41-61; Fraser at 11:47-12:10; Poston at 4:55-5:9; and Websense Email and Web Security (Exhibit 721-C-18) at 107-108 (citing mass-spam-url-classification-project.doc at 6 and 9); ThreatSeeker (Exhibit 721-C-19) at 50 (citing White Paper - Websense Threatseeker Network 2008.pdf at 6); and Next Generation Firewall (Exhibit 721-C-20) at 119 (citing Datasheet_appliance_2004.pdf at 1).

The prior art references further describe "determining, by the first threat server, whether the first computer object has been previously seen by comparing the data uniquely identifying the first computer object to a plurality of data uniquely identifying plural computer objects in a first database associated with the first threat server." *See, e.g.*, Chess at claim 20; Comegys at [0041]-[0043]; Kailash 066 at 6:23-39; Kailash 136 at 4:55-64; Natarajan at 16:52-67; Niles at 2:55-59; Sutton at 6:50-54; Tuvell 283 at 16:5-8; Gassoway at [0045]-[0046]; Hubbard 368 at [0052]-[0053]; Kester 001 at [0048]-[0050]; Liu at [0073]; McCorkendale at [0036]-[0037]; Sobel at 6:26-7:8; Shipman at 8:31-45; Fraser at 11:47-12:10; Poston at 5:63-6:6; and Websense Email and Web Security (Exhibit 721-C-18) at 29-31 (citing mass-spam-url-classification-project.doc at 6 and 9); ThreatSeeker (Exhibit 721-C-19) at 7 (citing Websense Threatseeker - White Paper 2007.pdf at 3); and Next Generation Firewall (Exhibit 721-C-20) at 18 (citing Stonesoft StoneGate NextGen Firewall v4.2.2 - security target report Jan 2009 at 19).

The prior art references further describe "the first threat server is further arranged to receive the details of the computer object from the first remote computer and determine whether the first computer object has been previously seen by comparing the data uniquely identifying the first computer object to a plurality of data uniquely identifying plural computer objects in a first database associate with the first threat server." *See, e.g.*, Chess at claim 20; Comegys at [0041]-[0043]; Kailash 066 at 6:23-39; Kailash 136 at 4:55-64; Natarajan at 16:52-67; Niles at 2:55-59;

Sutton at 6:50-54; Tuvell 283 at 16:5-8; Gassoway at [0045]-[0046]; Hubbard 368 at [0052]-[0053]; Kester 001 at [0048]-[0050]; Liu at [0073]; McCorkendale at [0036]-[0037]; Sobel at 6:26-7:8; Shipman at 8:31-45; Fraser at 11:47-12:10; Poston at 5:63-6:6; and Websense Email and Web Security (Exhibit 721-C-18) at 121-123 (citing mass-spam-url-classification-project.doc at 6 and 9); ThreatSeeker (Exhibit 721-C-19) at 53-54 (citing Websense Threatseeker - White Paper 2007.pdf at 3); and Next Generation Firewall (Exhibit 721-C-20) at 140 (citing Stonesoft StoneGate NextGen Firewall v5.1 - reference guide 2010.pdf at 96).

The prior art references further describe "receiving additional information about the first computer object from the first remote computer when the first computer object has not been previously seen." *See, e.g.*, Chess at 6:29-34; Comegys at [0051]; Kailash 066 at 6:23-39; Kailash 136 at 3:66-4:2; Natarajan at 10:6-15; Niles at 8:55-58; Sutton at 6:45-49; Tuvell 283 at 11:44-57; Gassoway at [0045]-[0046]; Hubbard 368 at [0074]-[0075]; Kester 001 at [0042]-[0045]; Liu at [0084]-[0086]; McCorkendale at [0036]-[0037]; Sobel at 6:26-49; Shipman at 8:50-62; Fraser at 21:21-22:27; Poston at 6:7-47; and Websense Email and Web Security (Exhibit 721-C-18) at 35-36 (citing mass-spam-url-classification-project.doc at 6 and 9); ThreatSeeker (Exhibit 721-C-19) at 12 (citing White Paper - Websense Threatseeker Network 2008.pdf at 7); and Next Generation Firewall (Exhibit 721-C-20) at 30-31 (citing Stonesoft StoneGate NextGen Firewall v5.1 - reference guide 2010.pdf at 102).

The prior art references further describe a "first threat server [] further arranged to receive additional information about the first computer object from the first remote computer when the first computer object has not been previously seen." *See, e.g.*, Chess at 6:29-34; Comegys at [0051]; Kailash 066 at 6:23-39; Kailash 136 at 3:66-4:2; Natarajan at 10:6-15; Niles at 8:55-58; Sutton at 6:45-49; Tuvell 283 at 11:44-57; Gassoway at [0045]-[0046]; Hubbard 368 at [0074]-

[0075]; Kester 001 at [0042]-[0045]; Liu at [0084]-[0086]; McCorkendale at [0036]-[0037]; Sobel at 6:26-49; Shipman at 8:50-62; Fraser at 21:21-22:27; Poston at 6:7-47; and Websense Email and Web Security (Exhibit 721-C-18) at 127-128 (citing mass-spam-url-classification-project.doc at 6 and 9); ThreatSeeker (Exhibit 721-C-19) at 58 (citing White Paper - Websense Threatseeker Network 2008.pdf at 7); and Next Generation Firewall (Exhibit 721-C-20) at 144-145 (citing Stonesoft StoneGate NextGen Firewall v5.1 - reference guide 2010.pdf at 102).

The prior art references further describe "stor[ing] the details of the first computer object and the received additional information about the first computer object in a second database associated with the first threat server when the first computer object has not been previously seen." *See, e.g.*, Chess at 6:57-7; Comegys at [0026]; Kailash 066 at 6:41-62; Kailash 136 at 4:42-54; Natarajan at 17:18-23; Niles at 2:59-3:6; Sutton at 9:21-32; Gassoway at [0048]-[0049]; Hubbard 368 at [0074]-[0075]; Kester 001 at [0052]; Liu at [0086]; McCorkendale at [0036]-[0038]; Sobel at 5:53-6:4; Shipman at 9:1-42; Fraser at 21:21-21:39; Poston at 6:48-7:5; and Websense Email and Web Security (Exhibit 721-C-18) at 40 (citing mass-spam-url-classification-project.doc at 9); ThreatSeeker (Exhibit 721-C-19) at 14 (citing Websense Threatseeker - White Paper 2007.pdf at 4); and Next Generation Firewall (Exhibit 721-C-20) at 40 (citing Stonesoft StoneGate NextGen Firewall v5.1 - reference guide 2010.pdf at 118).

The prior art references further describe "provid[ing] contents of the second database to at least one database associated with a central server, wherein the contents comprise a signature of the first computer object, behavior information about the first computer object, and information about the first remote computer." *See, e.g.*, Comegys at FIG. 5; Comegys at [0077]; Kailash 066 at 6:41-62; Kailash 136 at 6:46-53; Natarajan at 16:52-67; Niles at 6:56-61; Sutton at 21:48-22:5; Gassoway at [0051]; Hubbard 368 at [0074]-[0075]; Kester 001 at [0054]; Liu at [0086];

McCorkendale at [0045]-[0046]; Sobel at 7:9-17; Shipman at 9:1-42; Fraser at 9:52-10:14; Poston at 6:48-7:5; and Websense Email and Web Security (Exhibit 721-C-18) at 44 (citing mass-spam-url-classification-project.doc at 8); ThreatSeeker (Exhibit 721-C-19) at 16 (citing White Paper - Websense Threatseeker Network 2008.pdf at 5); and Next Generation Firewall (Exhibit 721-C-20) at 44 (citing Stonesoft StoneGate Firewall - technical specs 2006.pdf at 2).

The prior art references further describe "increas[ing] a count associated with a number of times that the first computer object has been seen, and providing the increased count associated with the number of times that the first computer object has been seen to the central server." *See, e.g.*, Comegys at [0055]; Kailash 066 at 16:18-27; Niles at 7:18-27; Sutton at 13:15-21; Tuvell 283 at 16:38-40; Gassoway at [0051]; Hubbard 368 at [0070]-[0072]; Kester 001 at[0060]-[0061]; Liu at [0086]; McCorkendale at [0045]-[0046]; Sobel at 7:56-8:23; Shipman at 9:1-46; Fraser at 9:14-28; Poston at 16:1-29; and Websense Email and Web Security (Exhibit 721-C-18) at 54-55 (citing mass-spam-url-classification-project.doc at 6 and 9); and Next Generation Firewall (Exhibit 721-C-20) at 52-53 (citing Stonesoft StoneGate v5.0 - administrators guide 2009.pdf at 644).

The prior art references further describe "the central server arranged to receive the increased count associated with the number of times that the first computer object has been seen." *See, e.g.*, Comegys at [0055]; Kailash 066 at 16:18-27; Niles at 7:18-27; Sutton at 13:15-21; Tuvell 283 at 16:38-40; Gassoway at [0051]; Hubbard 368 at [0070]-[0072]; Kester 001 at[0060]-[0061]; Liu at [0086]; McCorkendale at [0045]-[0046]; Sobel at 7:56-8:23; Shipman at 9:1-46; Fraser at 9:14-28; Poston at 16:1-29; and Websense Email and Web Security (Exhibit 721-C-18) at 147-148 (citing mass-spam-url-classification-project.doc at 6 and 9); and Next Generation Firewall (Exhibit 721-C-20) at 170-171 (citing Stonesoft StoneGate v5.0 - administrators guide 2009.pdf at 644).

The prior art references further describe "receiv[ing], at a second threat server, at least a portion of the contents of the at least one database associated with the central server, wherein the at least a portion of the contents of the at least one database associated with the central server include a subset of the details of the first computer object stored in the second database." *See, e.g.*, Chess at 8:33-41; Kailash 066 at 6:41-62; Kailash 136 at 6:46-53; Natarajan at 10:15-26; Niles at 3:17-29; Sutton at 9:21-32; Tuvell 283 at FIG. 11; Gassoway at [0042]-[0043]; Hubbard 368 at [0054]-[0056]; Kester 001 at [0069]-[0070]; Liu at [0086]; McCorkendale at [0050]-[0051]; Sobel at 7:56-8:23; Shipman at 9:62-10:10; Fraser at 9:52-10:14; Poston at 12:5-24; and Websense Email and Web Security (Exhibit 721-C-18) at 58 (citing Websense Web Security Datasheet 2006 at 2); ThreatSeeker (Exhibit 721-C-19) at 24 (citing Websense Threatseeker - White Paper 2007.pdf at 4); and Next Generation Firewall (Exhibit 721-C-20) at 64 (citing Stonesoft StoneGate v5.0 - administrators guide 2009.pdf at 128).

Other examples of these concepts are cited in the attached charts for the above references. *See* Exs. 721-C-1 through 721-C-20. It would have been known and simple to take a prior art for malware detection by comparison with similar objects, and it would have been obvious to a POSITA to try this. *Id.* It would have also yielded predictable results in the context of improving computer security. *Id.*

Forcepoint is not aware of any secondary considerations supporting non-obviousness of the '721 Patent claims. To the extent Plaintiffs seek to introduce any alleged secondary considerations in the future, Forcepoint reserves the right to respond at that time.

F. Invalidity Under Section 112

Pursuant to Section II, Paragraph 4 of the Order, Defendant provides an identification of the limitations of the '721 Patent that are invalid based on indefiniteness under pre-AIA 35 U.S.C.

§ 112 ¶ 2, or enablement or written description under pre-AIA 35 U.S.C. § 112 ¶ 1. These Contentions are being proffered without the benefit of expert disclosure or discovery.

Asserted Claims 1, 8, 9, and 14 of the '721 Patent (and all claims which depend from these claims) are indefinite, and thus invalid. "[A] patent is invalid for indefiniteness if its claims, read in light of the specification delineating the patent, and the prosecution history, fail to inform, with reasonable certainty, those skilled in the art about the scope of the invention." *Nautilus, Inc. v. Biosig Instruments, Inc.*, 572 U.S. 898, 901 (2014). For example, as applied in Plaintiffs' Infringement Contentions, the terms "previously seen" / "not been previously seen"; "to at least one database"; "information about the first remote computer"; "at least a portion of the contents of the at least one database associated with the central server"; "a subset of the details"; "behavior information"; "details of a first computer object" / "details of a computer object from a first remote computer"; "additional information about the first computer object"; "details of a second computer object" / "details of a computer object from a second remote computer"; and "object database" / "behavior database" / "computer-object database" are indefinite because each of these phrases not only is subjective but also does not have a meaning that can be clearly determined from the patent, and thus fails to put the public on notice of what is and is not covered by these claims.

Asserted Claims 1, 8, 9, and 14 of the '721 Patent are invalid under § 112 ¶ 1, because the specification as filed does not contain a sufficient written description supporting those claims. In particular, the patent disclosure would not lead a person of ordinary skill in the art to understand that the named inventor had possession of the purported inventions as claimed and in view of Plaintiffs' contentions. For example, Asserted Claims 1, 8, 9, and 14 (and all claims that depend from these claims) fail to satisfy the requirements of 35 U.S.C. § 112 for at least the following reasons: the '721 Patent fails to provide an adequate written description of the phrases "receiving

additional information about the first computer object" / "receive additional information about the first computer object"; "information about the first remote computer"; "at least a portion of the contents of the at least one database associated with the central server"; "a subset of the details"; "behavior information"; "details of a first computer object" / "details of a computer object from a first remote computer"; "providing the increased count associated with the number of times that the first computer object has been seen to the central server"; "details of a second computer object" / "details of a computer object from a second remote computer"; "the central server arranged to receive the increased count associated with the number of times that the first computer object has been seen"; and "object database" / "behavior database" / "computer-object database" as applied in Plaintiffs' Infringement Contentions.

The aforementioned claims are invalid because they are not enabled or described by the specification of the '721 Patent. The subject matter of these claims, as described above, are not sufficiently shown in the specification of the '721 Patent. The subject matter of these claims, as described above, are not sufficiently enabled because they do not teach one skilled in the art how to make and use the alleged invention from the specification of the '721 Patent. For example, For example, the '721 Patent fails to enable the following and thus, Asserted Claims 1, 8, 9, and 14 of the '721 Patent are invalid: "receiving additional information about the first computer object" / "receive additional information about the first computer object"; "information about the first remote computer"; "at least a portion of the contents of the at least one database associated with the central server"; "a subset of the details"; "behavior information"; "details of a first computer object" / "details of a computer object from a first remote computer"; "providing the increased count associated with the number of times that the first computer object has been seen to the central server"; "details of a second computer object" / "details of a computer object from a second remote

computer"; "the central server arranged to receive the increased count associated with the number of times that the first computer object has been seen"; and "object database" / "behavior database" / "computer-object database." The foregoing phrases are not described in such a way that one of ordinary skill in the art could implement it to achieve the results sought by the individual named on the face of the '721 Patent as the inventor. The foregoing phrases are not described in such a way that a person having ordinary skill in the art at the time of the alleged invention would have understood that the individual named as the inventor on the face of the '721 Patent was in possession of the claimed subject matter. The Asserted Claims of the '721 Patent also do not comply with § 112 because they do not set forth what the applicant regards is the invention.

A more detailed basis for the above indefiniteness, written description, and enablement defenses may be set forth in any expert report(s) on invalidity to be served on Plaintiffs in accordance with the Court's Scheduling Order.

G. Invalidity Under Section 101

Pursuant to Section II, Paragraph 4 of the Order, Forcepoint provides an identification of the claims of the '721 Patent they contend are directed to ineligible subject matter under pre-AIA 35 U.S.C. § 101. These Contentions are being proffered without expert disclosure or discovery.

Each Asserted Claim of the '721 Patent is directed to ineligible subject matter under 35 U.S.C. § 101. First, the Asserted Patent Claims of the '721 Patent are directed to the abstract idea of, for example, receiving, analyzing, and storing information. *See, e.g.*, '721 Patent at claim 1 ("receiving . . . details of a first computer object," "determining . . . whether the first computer object has been previously seen," "comparing the data uniquely identifying the first computer object to a plurality of data uniquely identifying plural computer objects," "receiving additional information about the first computer object," "storing the details of the first computer object and the received additional information," "providing contents of the second database to at least one

database associated with a central server," "increasing a count," and "receiving . . . at least a portion of the contents of the at least one database"); claim 8 ("receiving . . . details of a second computer object," "determining . . . whether the second computer object has been previously seen," "comparing the data uniquely identifying the second computer object to a plurality of data uniquely identifying plural computer objects," "determining that the second computer object has been seen before," "increasing a count associated with a number of times that the second computer object has been seen," and "receiving . . . a count associated with the number of times that the second computer object has been seen"); claim 9 ("receive details of a computer object," "receive the details of the computer object from the first remote computer," "determine whether the first computer object has been previously seen," "comparing the data uniquely identifying the first computer object to a plurality of data uniquely identifying plural computer objects," "receive additional information about the first computer object," "store the details of the first computer object and the received additional information about the first computer object," "provide contents of the second database to at least one database associated with a central server," "increase a count associated with a number of times that the first computer object has been seen," "receive the increased count," and "receive at least a portion of the contents of the at least one database associated with the central server"); claim 14 ("storing object signatures and metadata about objects," "storing object behavior information," and "storing information about what objects are present on what remote computers"). The specification of the '721 confirms that the Asserted Claims are directed to basic concepts of receiving, analyzing, and storing information. *See, e.g.*, *id.*, 2:19–28 ("[V]arious new and advantageous cloud-based strategies for fighting malware are disclosed. In particular a cloud-based approach is outlined where the central server receives information about objects and their behaviour on remote computers throughout the community

and builds a picture of objects and their behaviour seen throughout the community. This information is used to make comparisons with this data across the community in developing and applying various heuristics and or rules to determine whether a newly seen object is malevolent or not."); 2:29–31 ("This approach to fighting malware involves communicating, storing and managing vast amounts of data at the central server . . . ."); 2:36–38 ("It is also desirable to improve the processes for analysing the data to make the best use of the time and specialised skills of the human malware analysts."); 2:46–3:16; *see also* 1:56–62 ("More recently, so-called 'cloud' based techniques have been developed for fighting malware/viruses. In these techniques, protection is provided by signatures that are stored in the cloud, i.e. in a central server to which the remote computers are connected. Thus, a remote computer can be given protection as soon as a new malware object is spotted and its signature stored in the central server . . . .)); 1:65–2:7 ("This technique can also give the advantage of moving the processing burden from the remote computer to the central server. However, this technique is limited by sending only signature information or very basic information about an object to the central server. Therefore, in order to analyse whether or not an unknown object is malware, a copy of that object is normally sent to the central server where it is investigated by a human analyst. This is a time consuming and laborious task introducing considerable delay in classifying malware as safe or unsafe."); 2:7–10 ("Also, given the considerable volume of new objects that can be seen daily across a community, it is unrealistic to have a skilled human analyst investigate each new object thoroughly.").

Second, the Asserted Claims of the '721 Patent do not contain any inventive concept as they combine standard, generic, and well-known components in a conventional way to arrive at the claimed invention. The '721 Patent describes receiving, analyzing, and storing information using, for example, networks, computing devices, and storage components well-known in the prior

art, including the Internet, a LAN, personal computers, servers "of any type," PDAs, mobile phones, televisions, or "any other device capable of loading and operating computer objects." *See, e.g.*, *id.*, 2:59–3:1. In addition, the '721 Patent makes clear that its use of "computer objects" is well-known and conventional: "[a]n object in this sense may be a computer file, part of a file or a sub-program, macro, web page or any other piece of code to be operated by or on the computer, or any other event whether executed, emulated, simulated or interpreted." *Id.*, 4:2–5. The '721 Patent also describes using well-known storage methods and components, including computer RAM, hard disk drives, removable storage such as a USB pen drive, an email attachment, etc. *See, e.g.*, *id.*, 4:8–11. Considered individually or as an ordered combination, the claim limitations recite nothing more than the abstract idea of receiving, analyzing, and storing information. Simply identifying an overarching desirable outcome (such as "more accurately and more efficiently detecting malware" or "improv[ing] the processes for analysing the data to make the best use of the time and specialised skills of the human malware analysts") without specifying any technical improvements over the prior art to achieve that outcome does not rise to the level of an inventive and, thus, patent-eligible concept. *See Intell. Ventures I LLC v. Erie Indem. Co.*, 850 F.3d 1315, 1330–32 (Fed. Cir. 2017) ("The recited use of a mobile interface and pointers to retrieve user information evidences nothing more than a 'generic computer implementation' of the abstract idea that is insufficient to transform a patent-ineligible abstract idea into a patent-eligible invention."); *Intellectual Ventures I LLC v. Capital One Bank (USA)*, 792 F.3d 1363, 1367–68 (Fed. Cir. 2015) (claims directed to internet-based communications recite generic computer components and do not claim inventive concepts). Moreover, the prior art cited throughout Forcepoint's Contentions, as well as the patents themselves and the prior art cited therein, demonstrate that each claim element in every Asserted Claim is directed to well-understood, routine, and conventional computer

security components and techniques. The remaining Asserted Claims merely apply those conventional and generic computer components and techniques in a selected physical or technical environment—an environment where they had already long been used by those of ordinary skill as the prior art referenced herein reflects. Thus, the Asserted Claims of the '721 Patent fail to add anything to the underlying abstract idea sufficient to transform them into patent-eligible subject matter.

Furthermore, at least under Plaintiffs' apparent infringement theory, as set forth in their Infringement Contentions, the Asserted Claims of the '721 Patent are ineligible because they would preempt the entire field of receiving, analyzing, and storing information.

This ineligibility contention is based in whole or in part on Forcepoint's present understanding of the Asserted Claims of the '721 Patent, their current construction of the claims, and/or Plaintiffs' apparent construction of the claims in their current Infringement Contentions. Forcepoint is not adopting Plaintiffs' apparent claim construction, nor admitting to the accuracy of any particular claim construction. To the extent that Plaintiffs' apparent claim construction or applications thereof are reflected in this Contention, nothing herein should be construed as an admission that Forcepoint agrees with Plaintiffs' apparent claim construction or Plaintiffs' application of that claim construction in Plaintiffs' current Infringement Contentions. Further, claim construction is not necessary to determine that the Asserted Claims of the '721 Patent are ineligible.

Forcepoint's Contentions regarding ineligibility under 35 U.S.C. § 101 may be based on Plaintiffs' allegations of infringement. Forcepoint does not necessarily agree with the interpretations set forth in Plaintiffs' Infringement Contentions and thus this ineligibility contention is not an admission that the accused products meet any particular claim element or

infringe the Asserted Claim. In addition, nothing in this ineligibility contention should be interpreted as a position about whether any portion of the Asserted Claims are limiting or not. Further, by submitting this ineligibility contention, Forcepoint does not waive and hereby expressly reserves its right to raise invalidity defenses including, but not limited, to defenses under 35 U.S.C. §§ 102, 103, and/or 112.

Discovery in this case is ongoing and, accordingly, this ineligibility contention is not to be considered final. Forcepoint reserves all rights to revise, amend, or supplement this ineligibility claim at a later date as discovery progresses, if the Court issues further claim construction rulings, or if Plaintiffs amend their Infringement Contentions.

VI. INVALIDITY CONTENTIONS FOR THE '386 PATENT

A. General State of the Art at the Time of the Alleged Inventions

The prior art references identified in these Invalidity Contentions, and the "References Cited" on the face of the '386 Patent, may provide background and context pertinent to the teachings in, and interpretation of, the prior art referenced by the attached claim charts. Forcepoint may rely upon that prior art, including the "References Cited" on the face of the '386 Patent, to demonstrate the general state of the art at the time of the alleged inventions and what one of ordinary skill in the art would have understood at a time prior to the date of the alleged invention of the Asserted Claims. This prior art is exemplary only and is not in any way intended to limit the scope of what one of ordinary skill in the art would have understood at the times of the alleged inventions. Forcepoint reserves the right to rely upon additional prior art, information, and/or knowledge to demonstrate what one of ordinary skill would have understood at any time prior to the date of alleged invention of the Asserted Claims.

B. Claim Charts

Pursuant to Section II, Paragraph 4 of the Order, the claim charts attached in Appendix A as Exhibits 386-D-1 through 386-D-8 identify where each limitation of the Asserted Claims of the '386 Patent is found in the prior art.

C. Identification of the Prior Art

Based on Plaintiffs' Preliminary Infringement Contentions and authorized supplements thereto, Forcepoint identifies prior art below and in Appendix A as Exhibits 386-D-1 through 386-D-8, which contains charts disclosing the identity of each item of prior art that anticipates each claim and/or renders it obvious. As shown in Appendix A as Exhibits 386-D-1 through 386-D-8 and below, Forcepoint has identified each prior art reference by its number, country of origin, author, and date of issue (where applicable). Forcepoint notes that it has applied the prior art in accordance with Plaintiffs' improper assertions of infringement and improper applications of the claims. Forcepoint does not agree with Plaintiffs' application of the claims and denies infringement.

Forcepoint further contends that all claims that are anticipated by a particular reference are also rendered obvious by that same reference alone, in combination with the other references, and/or in combination with the knowledge of a person of ordinary skill in the art. Forcepoint reserves the right to rely upon any combination of the charted prior art under 35 U.S.C. § 103, yet Forcepoint has also identified exemplary obviousness combination in Section VI.E, *infra*.

'386 Patent Prior Art Patents/Patent Applications				
Ex. No.	**Patent / Publication No.**	**Country of Origin**	**Filing Date**	**Date of Issue / Publication**

'386 Patent Additional Prior Art/Background Art
U.S. Patent No. 8,069,213 ("Bloch 2010")
U.S. Patent No. 8,015,174 ("Hubbard 174")
U.S. Patent Publication No. 2009/0248623 ("Adelman 2009")
U.S. Patent Publication No. 2010/0256977 ("Yu 977")
Building Reputations for Internet Clients, Wei et al., Electronic Notes in Theoretical Computer Science 179 (2007) 17–30 ("Wei")
Generative Prior Knowledge for Discriminative Classification, Epshteyn et al., Journal of Artificial Intelligence Research 27 (2006) 25-53 ("Epshteyn")
A Small World Overlay P2P Transfer System with Role-Based and Reputation-Based Access Control Policies, Xia et al., 2008 International Conference on Internet Computing in Science and Engineering ("Xia")
A Multilevel Reputation System for Peer-to-Peer Networks, Xu et al., Sixth International Conference on Grid and Cooperative Computing (GCC 2007) ("Xu")

Furthermore, with respect to the '386 Patent, under pre-AIA 35 U.S.C. § 102(f), Forcepoint identifies the activities of entities involved in computer security as referenced in Provisional

Application Nos. 61/171,264 and 61/241,389, to which Plaintiffs claim priority. *See, e.g.*, Provisional Application No. 61/171,264 at [0002]-[0035]; Provisional Application No. 61/241,389 at [0002]-[0035].

Furthermore, with respect to the '386 Patent, under pre-AIA 35 U.S.C. §§ 102(a), (b), and (g)(2), Forcepoint reserves the right to identify additional prior art systems developed prior to April 21, 2009. *See, e.g.*, *Intell. Ventures II LLC v. FedEx Corp.*, No. 2:16-CV-00980-JRG, 2019 WL 1434656, at *8-11 (E.D. Tex. Mar. 29, 2019). Discovery is ongoing, and Forcepoint reserves the right to amend the Invalidity Contentions herein based on third-party discovery obtained.

D. Anticipation

At least under Plaintiffs' apparent infringement theory, the Asserted Claims of the '386 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by the references as set forth in the attached claim charts. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-13, 15, 16, and 18 of the '386 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Hubbard 495, Ironport Web Reputation, and Alperovitch as set forth in the attached claim chart.

E. Obviousness

At least under Plaintiffs' apparent infringement theory, the Asserted Claims of the '386 Patent are rendered obvious by the references identified in the attached claim charts, either alone or in the combinations with other prior art references as identified below. Forcepoint contends that one of ordinary skill in the art, at the time of the alleged invention of the Asserted '386 Patent Claims, would have been motivated to combine the references disclosed herein in such a way to reach the alleged inventions. In certain instances, the suggested obviousness combinations are provided in the alternative to Forcepoint's anticipation contentions, which shall not be construed

to suggest that any reference included in the combinations is not by itself anticipatory. The combinations evidencing teachings, suggestions, and/or motivations to combine the prior-art references in a way that renders the Asserted Claims obvious are merely exemplary.

Forcepoint reserves the right to amend these Contentions and prior art combinations in light of new information that may arise from third parties related to additional computer security systems. The following list of references are also evidence of the knowledge of POSITA at the time of the alleged invention: U.S. Patent No. 8,069,213 ("Bloch 2010"); U.S. Patent No. 8,015,174 ("Hubbard 174"); U.S. Patent Publication No. 2009/0248623 ("Adelman 2009"); U.S. Patent Publication No. 2010/0256977 ("Yu 977"); Building Reputations for Internet Clients ("Wei"); Generative Prior Knowledge for Discriminative Classification ("Epshteyn"); A Small World Overlay P2P Transfer System with Role-Based and Reputation-Based Access Control Policies ("Xia"); A Multilevel Reputation System for Peer-to-Peer Networks ("Xu"). *See also* Section VI.C., '386 Patent Additional Prior Art/Background Art Table, *supra*.

One of ordinary skill in the art would be motivated to combine these references in the above combinations for at least the following reasons. One of ordinary skill in the art would have understood that each of these references are in the same field of endeavor, namely methods and devices relating to computer security. *See, e.g.*, Hubbard 495 at 5:35-57, 6:53-7:7, 20:65-21:10; Alperovitch at [0034], [0071], [0072]; Lee at Abstract, 2:6-24, 2:60-3:17; Adelman 2008 at [0082], [0085], [0086]; Bloch 2007 at 3:52-4:3, 4:39-49, 10:40-61; ThreatSeeker (Exhibit 386-D-8) at 3–4 (citing Websense Product Overview (Jan. 10, 2007) at 2; The Websense ThreatSeeker Network: Leveraging Websense HoneyGrid Computing (Sep. 4, 2008) at 6); McAfee SiteAdvisor Plus (Exhibit 386-D-6) at 2–7 (citing 2009 McAfee Product Guide at 5–6, 14–15, 17, 21–26; 2009 McAfee DataSheet at 1); IronPort Web Reputation (Exhibit 386-D-7) at 3–4 (citing 2009 IronPort Report at 7; 2008 IronPort Web Reputation White Paper at 1, 3, 7).

One of ordinary skill in the art would have recognized that these references are directed to addressing the same problem, in particular, improving computer security. *See, e.g.*, Hubbard 495

at 6:60-63 ("For example, the gateway server module 120 may be configured to disallow URL requests that are categorized as being 'Malicious' or 'Spyware.'"); Alperovitch at [0034] ("Examples include the process of filtering malicious communications in an email, instant messaging, VoIP, SMS or other communication protocol system using analysis of the reputation of sender and content."); Lee at 2:64-67 ("For example, if the resource is a website, then the system may send the URL to a trusted URL reputation service and receive a response that indicates a reputation score for the resource."); Adelman 2008 at [0085] ("Based on the domain name related reputation data the Requester decides (determines) whether the Requester should visit the URL (Step 430)."); Bloch 2007 at 10:56-61 ("Alternatively, if a URL is not found in sender database 530 at step 607, then HTTP proxy 120 can consult other information sources, such as a URL whitelist, URL blacklist, or other information about the trustworthiness or "reputation" of the Web site associated with the URL."); ThreatSeeker (Exhibit 386-D-8) at 3–4 (citing Websense Product Overview (Jan. 10, 2007) at 2; The Websense ThreatSeeker Network: Leveraging Websense HoneyGrid Computing (Sep. 4, 2008) at 6); McAfee SiteAdvisor Plus (Exhibit 386-D-6) at 2–7 (citing 2009 McAfee Product Guide at 5–6, 14–15, 17, 21–26; 2009 McAfee DataSheet at 1); IronPort Web Reputation (Exhibit 386-D-7) at 3–4 (citing 2009 IronPort Report at 7; 2008 IronPort Web Reputation White Paper at 1, 3, 7).

Further, the Asserted Claims of the '386 Patent contain merely a duplication of concepts known in the prior art and have no patentable significance given that no unexpected results occur—*i.e.* the patentee merely combines known prior art elements according to known methods to yield predictable results. For example, the prior art references describe "determining if a reputation index for the Internet resource is at or above a threshold value established for the local area network." *See, e.g.*, Hubbard 495 at 10:64-11:2, 11:26-40, 18:53-19:22; Alperovitch at [0045],

[0058]; Lee at 2:48-59, 2:60-3:17, 3:66-4:7; Adelman 2008 at [0057], [0058], [0086]; Bloch 2007 at 1:41-48, 3:52-4:3, 6:35-51; ThreatSeeker (Exhibit 386-D-8) at 9–12 (citing The Web Isn't Fun Anymore: How Websense Technology Protects Against Internet-Based Threats (Aug. 1, 2007) at 3, 7; The Websense ThreatSeeker Network: Leveraging Websense HoneyGrid Computing (Sep. 4, 2008) at 8–9); McAfee SiteAdvisor Plus (Exhibit 386-D-6) at 15–22 (citing 2009 McAfee Product Guide at 5–6, 9–10, 12, 22); IronPort Web Reputation (Exhibit 386-D-7) at 10–13 (citing 2009 IronPort Report at 8, 30; 2008 IronPort Web Reputation White Paper at 3–4, 7).

The prior art references further describe "the reputation vector comprising a plurality of factors for the Internet resource." *See, e.g.*, Hubbard 495 at 10:19-26, 18:53-19:22, 20:4-41; Alperovitch at [0038], [0048], [0094]; Lee at 3:66-4:23, 4:49-64; Adelman 2008 at Abstract, [0051], [0058], [0059]; Bloch 2007 at 9:3-21, 9:44-61, 10:28-38. The prior art references further describe "a security appliance, the security appliance controlling access to the Internet." *See, e.g.*, Hubbard 495 at 6:53-7:7, 9:25-33; Alperovitch at [0030], [0050], [0073]; Lee at 2:60-3:17, 7:1-13; Adelman 2008 at [0082], [0085], [0086]; Bloch 2007 at 10:9-18, 11:39-58. The prior art references further describe "storing the reputation index for the Internet resource at the data collection site." *See, e.g.*, Hubbard 495 at 9:43-65, 11:41-12:3, 13:59-14:17; Alperovitch at [0009], [0060]; Lee at 5:28-38, 7:1-13, 7:27-38; Adelman 2008 at [0057], [0090]; Bloch 2007 at 6:52-63, 10:62-67, 11:39-51; ThreatSeeker (Exhibit 386-D-8) at 12–15 (citing Websense: IP based Spam blocking (2008) at 4; The Websense ThreatSeeker Network: Leveraging Websense HoneyGrid Computing (Sep. 4, 2008) at 8–9, 13); McAfee SiteAdvisor Plus (Exhibit 386-D-6) at 22–27 (citing 2009 McAfee Product Guide at 5–6, 9–10); IronPort Web Reputation (Exhibit 386-D-7) at 14–17 (citing 2008 IronPort Web Reputation White Paper at 3–5; 2009 IronPort Report at 30; 2006 Reputation Score Datasheet at 1).

Other examples of these concepts are cited in the attached charts for the above references. *See* Exs. 386-D-1 through 386-D-8. It would have been known and simple to take a prior art for improving computer security by controlling access to requested web content based on its "reputation" and arrive at the alleged invention, and it would have been obvious to a POSITA to try this. *Id.* It would have also yielded predictable results in the context of improving computer security. *Id.*

Forcepoint is not aware of any secondary considerations supporting non-obviousness of the '386 Patent claims. To the extent Plaintiffs seek to introduce any alleged secondary considerations in the future, Forcepoint reserves the right to respond at that time.

F. Invalidity Under Section 112

Pursuant to Section II, Paragraph 4 of the Order, Forcepoint provides an identification of the limitations of the '386 Patent that are invalid based on indefiniteness under pre-AIA 35 U.S.C. § 112 ¶ 2, or enablement or written description under pre-AIA 35 U.S.C. § 112 ¶ 1. These Contentions are being proffered without the full benefit of expert disclosure or discovery.

Asserted Claims 1, 3, 6-7, 9, 11, 13, 15, and 16 of the '386 Patent (and all claims which depend from these claims) are indefinite, and thus invalid. "[A] patent is invalid for indefiniteness if its claims, read in light of the specification delineating the patent, and the prosecution history, fail to inform, with reasonable certainty, those skilled in the art about the scope of the invention." *Nautilus, Inc. v. Biosig Instruments, Inc.*, 572 U.S. 898, 901 (2014). Furthermore, as applied in Plaintiffs' Infringement Contentions, "threshold value"; "behavior" / "behaviors"; "associations"; "popularity rank"; "decision transmission"; "remote reputation generating site"; "service engine"; "collecting a plurality of factors" / "obtaining the plurality of factors"; "populate a reputation vector"; "perform reputation analysis"; "reputation classifier"; "two or more of age of: a domain registration, popularity rank . . ." and "linked Internet resources" are indefinite because each of

these phrases not only is subjective but also does not have a meaning that can be clearly determined from the patent, and thus fails to put the public on notice of what is and is not covered by these claims.

Asserted Claims 1-7, 9, 11-13, 15-16, and 18 of the '386 Patent are invalid under § 112 ¶ 1, because the specification as filed does not contain a sufficient written description supporting those claims. In particular, the patent disclosure would not lead a person of ordinary skill in the art to understand that the named inventor had possession of the purported inventions as claimed and in view of Plaintiffs' contentions. Asserted Claims 1-7, 9, 11-13, 15-16, and 18 (and all claims that depend from these claims) fail to satisfy the requirements of 35 U.S.C. § 112 for at least the following reasons: the '386 Patent fails to provide an adequate written description of the phrases "reputation index"; "threshold value"; "popularity rank"; "remote reputation generating site"; "service engine"; "collecting a plurality of factors" / "obtaining the plurality of factors"; "populate a reputation vector"; "perform reputation analysis"; and "linked Internet resources" as applied in Plaintiffs' Infringement Contentions.

The aforementioned claims are invalid because they are not enabled or described by the specification of the '386 Patent. The subject matter of these claims, as described above, are not sufficiently shown in the specification of the '386 Patent. The subject matter of these claims, as described above, are not sufficiently enabled because they do not teach one skilled in the art how to make and use the alleged invention from the specification of the '386 Patent. For example, the '386 Patent fails to enable the following and thus, Asserted Claims 1-7, 9, 11-13, 15-16, and 18 of the '386 Patent are invalid: "reputation index"; "threshold value"; "popularity rank"; "remote reputation generating site"; "service engine"; "collecting a plurality of factors" / "obtaining the plurality of factors"; "populate a reputation vector"; "perform reputation analysis"; and "linked

Internet resources." The foregoing phrases are not described in such a way that one of ordinary skill in the art could implement it to achieve the results sought by the individual named on the face of the '386 Patent as the inventor. The foregoing phrases are not described in such a way that a person having ordinary skill in the art at the time of the alleged invention would have understood that the individual named as the inventor on the face of the '386 Patent was in possession of the claimed subject matter. The Asserted Claims of the '386 Patent also do not comply with § 112 because they do not set forth what the applicant regards is the invention.

A more detailed basis for the above indefiniteness, written description, and enablement defenses may be set forth in any expert report(s) on invalidity to be served on Plaintiffs in accordance with the Court's Scheduling Order.

G. Invalidity Under Section 101

Pursuant to Section II, Paragraph 4 of the Order, Forcepoint provides an identification of the claims of the '386 Patent they contend are directed to ineligible subject matter under pre-AIA 35 U.S.C. § 101. These Contentions are being proffered without expert disclosure or discovery.

Each Asserted Claim of the '386 Patent is directed to ineligible subject matter under 35 U.S.C. § 101. First, the Asserted Patent Claims of the '386 Patent are directed to the abstract idea of reputation and risk assessment. *See, e.g.*, '386 Patent, claim 1 ("determining if a reputation index for the Internet resource is at or above a threshold value established for the local area network," "the reputation index generated from a reputation vector for the Internet resource, the reputation vector comprising a plurality of factors for the Internet resource comprising security history, legitimacy, behavior, associations and location," "transmitting a decision transmission to the Internet-enabled client application of the client-side device, the decision transmission allowing or denying access to the Internet resource"); claim 7 ("analyzing a reputation vector for the Web site and generating a reputation index for the Web site from the reputation vector," "the reputation

vector comprising a plurality of factors for the Internet resource comprising security history, legitimacy, behavior, associations and location," "wherein access to the Internet resource by any of the plurality of client-side devices is determined based on the reputation index exceeding a threshold value established for the local area network"); claim 11 ("accessing a reputation index for the Internet resource, the reputation index based on a reputation vector for the Internet resource comprising security history, legitimacy, behavior, associations and location," "determining if the reputation index for the Internet resource is at or above a threshold value established for the local area network," "transmitting a decision transmission to the Web browser of the client-side device, the decision transmission allowing or denying access to the Internet resource"); claim 13 ("A method for building a reputation database for Internet resources, the method comprising:," "collecting a plurality of factors for an Internet resource site to populate a reputation vector for the Internet resource to perform reputation analysis of the Internet resource," "constructing a reputation vector for the Internet resource at the data collection site, the reputation vector comprising a plurality of factors for the Internet resource comprising security history, legitimacy, behavior, associations and location," "analyzing the reputation vector to generate a reputation index for the Internet resource based on the analysis of the plurality of factors and the reputation classifier"). The specification of the '386 confirms that the Asserted Claims are directed to basic concepts of reputation and risk assessment. *See, e.g.*, *id.*, 1:23–28 ("The present invention is related to assessing risk profiles of Internet resources. More specifically, the present invention is related to a system and method for developing a risk profile for an Internet resource by generating a reputation index, based on attributes of the resource collectively referred to as the reputation vector of the resource."); 1:51–58 ("A possible analogy to the reputation of an Internet resource is the credit score of an individual. A Web user would want to be informed of the reputation of a

Web site before visiting it, just as a lender would want to know the reputation, the financial reputation at least, of a borrower of the lender's money. A credit score is based on a variety of fairly tightly related factors, such as existing debt, available credit lines, on-time payments, existing credit balances, etc."); 1:65–2:3 ("There are different methods of calculating credit scores. The best known one, FICO, is a credit score developed by the Fair Isaac Corporation. FICO is used by many mortgage lenders that use a risk-based system to determine the possibility that the borrower may default on financial obligations to the mortgage lender."); 2:8-14 ("That FICO® score is calculated by a mathematical equation that evaluates many types of information from the borrower's credit report at that agency. In order for a FICO® score to be calculated on the borrower's credit report, the report must contain sufficient information—and sufficient recent information—on which to base a score."); 2:19–21 ("FICO scores provide a reliable guide to future risk based solely on credit report data. FICO® scores have a 300-850® score range. The higher the score, the lower the risk."); 2:26–29 ("Although FICO won't reveal exactly how it determines a credit score, it considers the following factors: payment history (35%); outstanding debt (30%); length of credit history (15%); types of credit (10%); and new credit (10%)."); 2:30–34 ("Returning to Internet resources, attackers have been using the Internet to attack the computers and other devices of users of the Internet. Attackers continue to take advantage of flaws in traditional security measures and bypass reputation-based systems to increase attack effectiveness."); 4:36–48 ("The present invention focuses on the reputation of a Web site, or any Internet-based service or resource. The reputation incorporates many factors that are relevant to the overall safety of visiting a site. The reputation assesses the over-time track record of the site and the provider that operates the web site, the current characteristics of the pages and related files composing the site, and reputations of sites linked to the site and of referrers to the site. The overall

assessment is expressed as a score, not unlike a FICO score, that predicts the potential risk of visiting the site which can be used to protect users from inadvertently visiting or utilizing higher-risk sites or services within the Internet."); 4:49–53 ("There are many components of reputation available within the Internet. Much like other scoring mechanisms, such as credit scoring, the factors to be considered must be decided upon, and the weight that each factor will have in the overall 'score' must be determined."); 4:54–55 ("The present invention provides a system and method for defining a reputation of an Internet service such as a Web site."); 4:60–5:3 ("Preferred steps of the invention are: evaluation of the important features to be included in the collection of reputation-relevant features referred to as the reputation vector; collection of the reputation vectors for a large sample of Internet resource; training of a classifier based on training sets of known high and low reputation services/sites; testing of a model against a wide variety of random samples; run-time evaluation of requests for the Internet resource using the developed classifier and responding to reputation index information requests from clients which enforce network security policy."); 13:28–32 ("This embodiment is preferred since classifying a large percentage of existing Web sites into reputation risk assessments quickly and efficiently requires an automated process because the number of humans required is too large to be practical or economical.").

Second, the Asserted Claims of the '386 Patent do not contain any inventive concept as they combine standard, generic, and well-known components in a conventional way to arrive at the claimed invention. The '386 Patent describes performing reputation and risk assessment using local area networks, Internet resources, devices, servers, risk scores, and factors well-known in the prior art . *See, e.g.*, *id.*, 1:30–50, 1:51–2:29, 2:30–35, 2:62–64, 2:65–3:32, 3:44–48, 4:6–19, 9:53–67. Considered individually or as an ordered combination, the claim limitations recite nothing more than the abstract idea of reputation and risk assessment. Simply identifying an overarching

desirable outcome (such as "measur[ing] the security risk associated with accessing an Internet resource in a more predictive way") without specifying any technical improvements over the prior art to achieve that outcome does not rise to the level of an inventive and, thus, patent-eligible concept. *See Intell. Ventures I LLC v. Erie Indem. Co.*, 850 F.3d 1315, 1330–32 (Fed. Cir. 2017) ("The recited use of a mobile interface and pointers to retrieve user information evidences nothing more than a 'generic computer implementation' of the abstract idea that is insufficient to transform a patent-ineligible abstract idea into a patent-eligible invention."); *Intellectual Ventures I LLC v. Capital One Bank (USA)*, 792 F.3d 1363, 1367–68 (Fed. Cir. 2015) (claims directed to internet-based communications recite generic computer components and do not claim inventive concepts). Moreover, the prior art cited throughout Forcepoint's Contentions, as well as the patents themselves and the prior art cited therein, demonstrate that each claim element in every Asserted Claim is directed to well-understood, routine, and conventional computer security components and techniques. The remaining Asserted Claims merely apply those conventional and generic computer components and techniques in a selected physical or technical environment—an environment where they had already long been used by those of ordinary skill as the prior art referenced herein reflects. Thus, the Asserted Claims of the '386 Patent fail to add anything to the underlying abstract idea sufficient to transform them into patent-eligible subject matter.

Furthermore, at least under Plaintiffs' apparent infringement theory, as set forth in their Infringement Contentions, the Asserted Claims of the '386 Patent are ineligible because they would preempt the entire field of reputation and risk assessment.

This ineligibility contention is based in whole or in part on Forcepoint's present understanding of the Asserted Claims of the '386 Patent, their current construction of the claims, and/or Plaintiffs' apparent construction of the claims in their current Infringement Contentions.

Forcepoint is not adopting Plaintiffs' apparent claim construction, nor admitting to the accuracy of any particular claim construction. To the extent that Plaintiffs' apparent claim construction or applications thereof are reflected in this Contention, nothing herein should be construed as an admission that Forcepoint agrees with Plaintiffs' apparent claim construction or Plaintiffs' application of that claim construction in Plaintiffs' current Infringement Contentions. Further, claim construction is not necessary to determine that the Asserted Claims of the '386 Patent are ineligible.

Forcepoint's Contentions regarding ineligibility under 35 U.S.C. § 101 may be based on Plaintiffs' allegations of infringement. Forcepoint does not necessarily agree with the interpretations set forth in Plaintiffs' Infringement Contentions and thus this ineligibility contention is not an admission that the accused products meet any particular claim element or infringe the Asserted Claim. In addition, nothing in this ineligibility contention should be interpreted as a position about whether any portion of the Asserted Claims are limiting or not. Further, by submitting this ineligibility contention, Forcepoint does not waive and hereby expressly reserves its right to raise invalidity defenses including, but not limited, to defenses under 35 U.S.C. §§ 102, 103, and/or 112.

Discovery in this case is ongoing and, accordingly, this ineligibility contention is not to be considered final. Forcepoint reserves all rights to revise, amend, or supplement this ineligibility claim at a later date as discovery progresses, if the Court issues further claim construction rulings, or if Plaintiffs amend their Infringement Contentions.

VII. INVALIDITY CONTENTIONS FOR THE '928 PATENT

A. General State of the Art at the Time of the Alleged Inventions

The prior art references identified in these Invalidity Contentions, and the "References Cited" on the face of the '928 Patent, may provide background and context pertinent to the

teachings in, and interpretation of, the prior art referenced by the attached claim charts. Forcepoint may rely upon that prior art, including the "References Cited" on the face of the '928 Patent, to demonstrate the general state of the art at the time of the alleged inventions and what one of ordinary skill in the art would have understood at a time prior to the date of the alleged invention of the Asserted Claims. This prior art is exemplary only and is not in any way intended to limit the scope of what one of ordinary skill in the art would have understood at the times of the alleged inventions. Forcepoint reserves the right to rely upon additional prior art, information, and/or knowledge to demonstrate what one of ordinary skill would have understood at any time prior to the date of alleged invention of the Asserted Claims.

B. Claim Charts

Pursuant to Section II, Paragraph 4 of the Order, the claim charts attached in Appendix A as Exhibits 928-E-1 through 928-E-9 identify where each limitation of the Asserted Claims of the '928 Patent is found in the prior art.

C. Identification of the Prior Art

Based on Plaintiffs' Preliminary Infringement Contentions and authorized supplements thereto, Forcepoint identifies prior art below and in Appendix A as Exhibits 928-E-1 through 928-E-9, which contains charts disclosing the identity of each item of prior art that anticipates each claim and/or renders it obvious. As shown in Appendix A as Exhibits 928-E-1 through 928-E-9 and below, Forcepoint has identified each prior art reference by its number, country of origin, author, and date of issue (where applicable). Forcepoint notes that it has applied the prior art in accordance with Plaintiffs' improper assertions of infringement and improper applications of the claims. Forcepoint does not agree with Plaintiffs' application of the claims and denies infringement.

Forcepoint further contends that all claims that are anticipated by a particular reference are also rendered obvious by that same reference alone, in combination with the other references, and/or in combination with the knowledge of a person of ordinary skill in the art. Forcepoint reserves the right to rely upon any combination of the charted prior art under 35 U.S.C. § 103, yet Forcepoint has also identified exemplary obviousness combination in Section VII.E, *infra*.

'928 Patent Prior Art Patents/Patent Applications				
Ex. No.	**Patent / Publication No.**	**Country of Origin**	**Filing Date**	**Date of Issue / Publication**
Ex. 928-E-1	U.S. Patent No. 8,370,938 ("Daswani")	U.S.	Apr. 15, 2010	Feb. 5, 2013
Ex. 928-E-2	U.S. Patent No. 7,621,613 ("McClintock")	U.S.	May 26, 2009	Dec. 31, 2013
Ex. 928-E-3	U.S. Patent Application Publication No. US 2009/0070873 ("McAfee")	U.S.	Sep. 11, 2007	Mar. 12, 2009
Ex. 928-E-4	U.S. Patent Application Publication No. US 2012/0047581 ("Banerjee")	U.S.	Aug. 12, 2011	Feb. 23, 2012
Ex. 928-E-5	U.S. Patent Application Publication No. US 2013/0007870 ("Devarajan")	U.S.	Sep. 29, 2011	Jan 3, 2013

'928 Patent Prior Art Systems

Ex. 928-E-9	Websense Email and Web Security

'928 Patent Additional Prior Art/Background Art
Abstracting Application-Level Web Security, Scott (2002) ("Scott")
ADSandbox: Sandboxing JavaScript to fight Malicious Websites, Dewald, University of Mannheim & Technical University of Vienna (2010) ("Dewald")
Identification of Potential Malicious Web Pages, Le, Ninth Australian Information Security Conference (2011) ("Le")
Prophiler: A Fast for the Large-Scale Detection of Malicious Web Pages, Canali, WWW Session: Web Security (2011) ("Canali")
WebPatrol: Automated Collection and Replay of Web-based Malware Scenarios, Chen, ASIACCS (2011) ("Chen 2011")
Toward automatic discovery of malware signature for anti-virus cloud computing. Yan et. al. International Conference on Complex Sciences. Springer, Berlin, Heidelberg (2009) ("Yan")
Malware detection based on cloud computing integrating intrusion ontology representation. Martínez et. al. IEEE Latin-American Conference on Communications, IEEE (2010) ("Martinez")
A Three-Phases Scheduling in a Hierarchical Cloud Computing Network, Wang et. al., 2011 Third International Conference on Communications and Mobile Computing pp. 114-117, (2011) ("Wang")

Furthermore, with respect to the '928 Patent, under pre-AIA 35 U.S.C. §§ 102(a), (b), and (g)(2), Forcepoint reserves the right to identify additional prior art systems developed prior to October 3, 2011. *See, e.g.*, *Intell. Ventures II LLC v. FedEx Corp.*, No. 2:16-CV-00980-JRG, 2019 WL 1434656, at *8-11 (E.D. Tex. Mar. 29, 2019). Discovery is ongoing, and Forcepoint reserves the right to amend the Invalidity Contentions herein based on third-party discovery.

D. Anticipation

At least under Plaintiffs' apparent infringement theory, the Asserted Claims of the '928 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by the references as set forth in the attached claim charts. At least under Plaintiffs'

apparent infringement theory, Asserted Claims 1-20 of the ’928 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Daswani and Devarajan as set forth in the attached claim charts. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 1-4, 6, and 8-20 of the ’928 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by McAfee as set forth in the attached claim chart. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 1-20 of the ’928 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by DLP Authority, Next Generation Firewall, ThreatSeeker, and Websense Email and Web Security as set forth in the attached claim charts.

E. Obviousness

At least under Plaintiffs’ apparent infringement theory, the Asserted Claims of the ’928 Patent are rendered obvious by the references identified in the attached claim charts, either alone or in the combinations with other prior art references as identified below. Forcepoint contends that one of ordinary skill in the art, at the time of the alleged invention of the Asserted ’928 Patent Claims, would have been motivated to combine the references disclosed herein in such a way to reach the alleged inventions. In certain instances, the suggested obviousness combinations are provided in the alternative to Forcepoint’s anticipation contentions, which shall not be construed to suggest that any reference included in the combinations is not by itself anticipatory. The combinations evidencing teachings, suggestions, and/or motivations to combine the prior-art references in a way that renders the Asserted Claims obvious are merely exemplary.

Forcepoint reserves the right to amend these Contentions and prior art combinations in light of new information that may arise from third parties related to additional malware detection and neutralization systems. The following list of references are also evidence of the knowledge of POSITA at the time of the alleged invention: Scott, Dewald, Le, Canali, Yan, Martinez, Wang, and Chen 2011.

One of ordinary skill in the art would be motivated to combine these references in the above combinations for at least the following reasons. One of ordinary skill in the art would have

understood that each of these references are in the same field of endeavor, namely methods and devices relating to malware detection and neutralization computer security. *See, e.g.*, Daswani at 3:22-30; McClintock at Abstract; McAfee at Abstract; Banerjee at [0004]; Devarajan at [0001]; DLP Authority (Exhibit 928-E-6) at 4-5 (citing Websense Content Protection Suite – User Guide at 7); Next Generation Firewall (Exhibit 928-E-7) at 4 (citing Stonesoft StoneGate NextGen Firewall – Whitepaper 2010 at 10); ThreatSeeker (Exhibit 928-E-8) at 5-6 (citing Product Overview – Websense 2007 at 2-3); Websense Email and Web Security (Exhibit 928-E-9) at 11 (citing Websense Unveils TRITON Architecture Unifying Web, Data and Email Security at 1).

One of ordinary skill in the art would have recognized that these references are directed to addressing the same problem, in particular, improving malware detection and neutralization. *See, e.g.*, Daswani at 3:22-30; McClintock at Abstract; McAfee at Abstract; Banerjee at [0004]; Devarajan at [0001]; DLP Authority (Exhibit 928-E-6) at 4-5 (citing Websense Content Protection Suite – User Guide at 7); Next Generation Firewall (Exhibit 928-E-7) at 4 (citing Stonesoft StoneGate NextGen Firewall – Whitepaper 2010 at 10); ThreatSeeker (Exhibit 928-E-8) at 5-6 (citing Product Overview – Websense 2007 at 2-3); Websense Email and Web Security (Exhibit 928-E-9) at 11 (citing Websense Unveils TRITON Architecture Unifying Web, Data and Email Security at 1).

Further, the Asserted Claims of the ’928 Patent contain merely a duplication of concepts known in the prior art and have no patentable significance given that no unexpected results occur—i.e. the patentee merely combines known prior art elements according to known methods to yield predictable results. For example, the prior art references describe “[a] content analysis and malware prevention method comprising.” *See, e.g.*, Daswani at 3:22-30; McClintock at Abstract; McAfee at Abstract; Banerjee at [0004]; Devarajan at [0001]; DLP Authority (Exhibit 928-E-6) at

4-5 (citing Websense Content Protection Suite – User Guide at 7); Next Generation Firewall (Exhibit 928-E-7) at 4 (citing Stonesoft StoneGate NextGen Firewall – Whitepaper 2010 at 10); ThreatSeeker (Exhibit 928-E-8) at 5-6 (citing Product Overview – Websense 2007 at 2-3); Websense Email and Web Security (Exhibit 928-E-9) at 11 (citing Websense Unveils TRITON Architecture Unifying Web, Data and Email Security at 1). The prior art references further describe "intercepting, by a protection agent, a request from a web browser." *See, e.g.*, Daswani at 4:27-38; McClintock at 4:59-5-3; McAfee at [0070]; Banerjee at [0036]; Devarajan at [0089]; DLP Authority (Exhibit 928-E-6) at 12 (citing Websense Content Protection Suite – User Guide at 8); Next Generation Firewall (Exhibit 928-E-7) at 6 (citing Stonesoft StoneGate NextGen Firewall v5.3 – Reference Guide at 35); ThreatSeeker (Exhibit 928-E-8) at 9 (citing Websense Threatseeker Network 2008 - Whitepaper at 7); Websense Email and Web Security (Exhibit 928-E-9) at 24 (citing Websense Web Security Datasheet 2005 at 4)). The prior art references further describe "determining, by the protection agent, whether the request is associated with known malicious content." *See, e.g.*, Daswani at 6:37-46; McClintock at 3:34-41; McAfee at [0036]; Banerjee at [0060]; Devarajan at [0111]-[0112]; DLP Authority (Exhibit 928-E-6) at 15 (citing Websense Content Protection Suite – User Guide at 10); Next Generation Firewall (Exhibit 928-E-7) at 11 (citing Stonesoft StoneGate NextGen Firewall v5.3 – Reference Guide at 21); ThreatSeeker (Exhibit 928-E-8) at 15 (citing Websense Threatseeker Network 2008 - Whitepaper at 9); Websense Email and Web Security (Exhibit 928-E-9) at 26 (citing Websense Web Security Datasheet 2008 at 5). The prior art references further describe "when the request is associated with known malicious content, blocking, by the protection agent, the request]." *See, e.g.*, Daswani at 9:54-61; McClintock at 6:38-60; McAfee at [0082]; Banerjee at [0066]; Devarajan at [0101]; DLP Authority (Exhibit 928-E-6) at 17 (citing Websense Content Protection Suite – User Guide

at 7); Next Generation Firewall (Exhibit 928-E-7) at 14 (citing Stonesoft StoneGate NextGen Firewall v5.1 – Reference Guide at 29); ThreatSeeker (Exhibit 928-E-8) at 20 (citing Websense Threatseeker Network 2008 - Whitepaper at 9); Websense Email and Web Security (Exhibit 928-E-9) at 34 (citing Websense Web Security Datasheet 2008 at 5).

Other examples of these concepts are cited in the attached charts for the above references. *See* Exs. 928-E-1 through 928-E-9. It would have been known and simple to take a prior art for detecting and neutralizing web-based malware by analyzing associations of requested webpages with known malware to arrive at the alleged invention, and it would have been obvious to a POSITA to try this. *Id.* It would have also yielded predictable results in the context of improving malware detection and neutralization. *Id.*

Forcepoint is not aware of any secondary considerations supporting non-obviousness of the '928 Patent claims. To the extent Plaintiffs seek to introduce any alleged secondary considerations in the future, Forcepoint reserves the right to respond at that time.

F. Invalidity Under Section 112

Pursuant to Section II, Paragraph 4 of the Order, Forcepoint provides an identification of the limitations of the '928 Patent that are invalid based on indefiniteness under pre-AIA 35 U.S.C. § 112 ¶ 2, or enablement or written description under pre-AIA 35 U.S.C. § 112 ¶ 1. These Contentions are being proffered without the full benefit of expert disclosure or discovery.

Asserted Claims 1-3, 5-7, 9-11, 13-14, and 16-20 of the '928 Patent (and all claims which depend from these claims) are indefinite, and thus invalid. "[A] patent is invalid for indefiniteness if its claims, read in light of the specification delineating the patent, and the prosecution history, fail to inform, with reasonable certainty, those skilled in the art about the scope of the invention." *Nautilus, Inc. v. Biosig Instruments, Inc.*, 572 U.S. 898, 901 (2014). Furthermore, as applied in Plaintiffs' Infringement Contentions, "content analysis"; "associated with known malicious

content"; "malware threat"; "supplementing . . . the web content with indicators"; "vulnerability" / "vulnerabilities"; "pre-process data encryption"; "sending the request to one or more web servers comprises iteratively sending a plurality of requests to the one or more web servers"; and "processing the web content prior to identifying the malware threat within the web content" are indefinite because each of these phrases not only is subjective but also does not have a meaning that can be clearly determined from the patent, and thus fails to put the public on notice of what is and is not covered by these claims.

Asserted Claims 1-3, 5-7, 9-11, 13-14, 16-17, and 19 of the '928 Patent are invalid under § 112 ¶ 1, because the specification as filed does not contain a sufficient written description supporting those claims. In particular, the patent disclosure would not lead a person of ordinary skill in the art to understand that the named inventor had possession of the purported inventions as claimed and in view of Plaintiffs' contentions. Asserted Claims 1-3, 5-7, 9-11, 13-14, 16-17, and 19 (and all claims that depend from these claims) fail to satisfy the requirements of 35 U.S.C. § 112 for at least the following reasons: the '928 Patent fails to provide an adequate written description of the phrases "malware threat"; "supplementing . . . the web content with indicators"; "vulnerability" / "vulnerabilities"; "image analysis"; "pre-process data encryption"; "de-chunking"; and "based on an aggregation of the analyses" as applied in Plaintiffs' Infringement Contentions.

The aforementioned claims are invalid because they are not enabled or described by the specification of the '928 Patent. The subject matter of these claims, as described above, are not sufficiently shown in the specification of the '928 Patent. The subject matter of these claims, as described above, are not sufficiently enabled because they do not teach one skilled in the art how to make and use the alleged invention from the specification of the '928 Patent. For example, the

’928 Patent fails to enable the following and thus, Asserted Claims 1-3, 5-7, 9-11, 13-14, 16-17, and 19 of the ’928 Patent are invalid: “malware threat”; “supplementing . . . the web content with indicators”; “vulnerability” / “vulnerabilities”; “image analysis”; “pre-process data encryption”; “de-chunking”; and “based on an aggregation of the analyses.” The foregoing phrases are not described in such a way that one of ordinary skill in the art could implement it to achieve the results sought by the individual named on the face of the ’928 Patent as the inventor. The foregoing phrases are not described in such a way that a person having ordinary skill in the art at the time of the alleged invention would have understood that the individual named as the inventor on the face of the ’928 Patent was in possession of the claimed subject matter. The Asserted Claims of the ’928 Patent also do not comply with § 112 because they do not set forth what the applicant regards is the invention.

A more detailed basis for the above indefiniteness, written description, and enablement defenses may be set forth in any expert report(s) on invalidity to be served on Plaintiffs in accordance with the Court’s Scheduling Order.

G. Invalidity Under Section 101

Pursuant to Section II, Paragraph 4 of the Order, Forcepoint provides an identification of the claims of the ’928 Patent they contend are directed to ineligible subject matter under pre-AIA 35 U.S.C. § 101. These Contentions are being proffered without expert disclosure or discovery.

Each Asserted Claim of the ’928 Patent is directed to ineligible subject matter under 35 U.S.C. § 101. First, the Asserted Patent Claims of the ’928 Patent are directed to the abstract idea of filtering web content and data by reassembling a web page without malware threats. *See, e.g.*, ’928 Patent, claim 1 (“receiving, at the protection agent on a remote computer, web content from the one or more web servers, wherein web content comprises data for assembling a web page,” “identifying, by the protection agent, a malware threat within the web content,” “in response to

identifying the malware threat, modifying, by the protection agent, the web content, wherein modifying the web content comprises modifying the web content at protocol level to remove the malware threat from the web content," "assembling, by the protection agent, a modified version of the web page, wherein the modified web page is assembled using the modified web content, and wherein the modified version of the web page does not comprise the malware threat"); claim 9 ("receiving web content from one or more web servers, wherein web content comprises data for assembling a web page," "identifying a malware threat within the web content," "in response to identifying the malware threat, modifying the web content, wherein modifying the web content comprises modifying the web at protocol level to remove the malware threat from the web content," "assembling a modified version of the web page, wherein the modified web page is assembled using the modified web content, and wherein the modified version of the web page does not comprise the malware threat"). The specification of the '928 confirms that the Asserted Claims are directed to basic concepts of filtering web content and data by reassembling a web page without malware threats. *See, e.g.*, *id.*, 1:43–54 ("In accordance with an exemplary aspect, a protection module operates to analyze threats, at the protocol level (e.g., at the HTML level), by intercepting all requests that a browser engine resident in a computing device sends and receives, and the protection agent completes the requests without the help of the browser engine. And then the protection module analyzes and/or modifies the completed data before the browser engine has access to it, to, for example, display it. After performing all of its processing, removing, and/or adding any code as needed, the protection module provides the HTML content to the browser engine . . . ."); 1:58–63 ("This allows the protection module to have control over what a browser engine "sees," providing means to remove any exploits, malware, and other threats dynamically. This also enables the protection module to add content into the browser stream at the HTML level,

before receipt by the browser."); 2:9–19 ("The differences between the disclosed protocol-level analysis approach compared to other prior anti-malware approaches are significant. In the context of search result annotation for example, the data (e.g., a web page of search results) is first analyzed and modified by an analysis engine of the protection module, which has control over every element of a web page before the web page is operated on by the browser engine. This is in contrast to prior approaches that just make high-level modifications to the content after the content has been rendered and displayed through a Browser Helper Object.").

Second, the Asserted Claims of the '928 Patent do not contain any inventive concept as they combine standard, generic, and well-known components in a conventional way to arrive at the claimed invention. The '928 Patent describes filtering web content and data by reassembling a web page without malware threats using conventional hardware and software components, computers, web servers, and networks that are well-known in the prior art. *See, e.g.*, *id.*, 3:4–20; 8:58–10:38. Considered individually or as an ordered combination, the claim limitations recite nothing more than the abstract idea of filtering web content and data by reassembling a web page without malware threats. Simply identifying an overarching desirable outcome (such as "providing means to remove any exploits, malware, and other threats dynamically") without specifying any technical improvements over the prior art to achieve that outcome does not rise to the level of an inventive and, thus, patent-eligible concept. *See Intell. Ventures I LLC v. Erie Indem. Co.*, 850 F.3d 1315, 1330–32 (Fed. Cir. 2017) ("The recited use of a mobile interface and pointers to retrieve user information evidences nothing more than a 'generic computer implementation' of the abstract idea that is insufficient to transform a patent-ineligible abstract idea into a patent-eligible invention."); *Intellectual Ventures I LLC v. Capital One Bank (USA)*, 792 F.3d 1363, 1367–68 (Fed. Cir. 2015) (claims directed to internet-based communications recite generic

computer components and do not claim inventive concepts). Moreover, the prior art cited throughout Forcepoint's Contentions, as well as the patents themselves and the prior art cited therein, demonstrate that each claim element in every Asserted Claim is directed to well-understood, routine, and conventional computer security components and techniques. The remaining Asserted Claims merely apply those conventional and generic computer components and techniques in a selected physical or technical environment—an environment where they had already long been used by those of ordinary skill as the prior art referenced herein reflects. Thus, the Asserted Claims of the '928 Patent fail to add anything to the underlying abstract idea sufficient to transform them into patent-eligible subject matter.

Furthermore, at least under Plaintiffs' apparent infringement theory, as set forth in their Infringement Contentions, the Asserted Claims of the '928 Patent are ineligible because they would preempt the entire field of filtering web content and data by reassembling a web page without malware threats.

This ineligibility contention is based in whole or in part on Forcepoint's present understanding of the Asserted Claims of the '928 Patent, their current construction of the claims, and/or Plaintiffs' apparent construction of the claims in their current Infringement Contentions. Forcepoint is not adopting Plaintiffs' apparent claim construction, nor admitting to the accuracy of any particular claim construction. To the extent that Plaintiffs' apparent claim construction or applications thereof are reflected in this Contention, nothing herein should be construed as an admission that Forcepoint agrees with Plaintiffs' apparent claim construction or Plaintiffs' application of that claim construction in Plaintiffs' current Infringement Contentions. Further, claim construction is not necessary to determine that the Asserted Claims of the '928 Patent are ineligible.

Forcepoint's Contentions regarding ineligibility under 35 U.S.C. § 101 may be based on Plaintiffs' allegations of infringement. Forcepoint does not necessarily agree with the interpretations set forth in Plaintiffs' Infringement Contentions and thus this ineligibility contention is not an admission that the accused products meet any particular claim element or infringe the Asserted Claim. In addition, nothing in this ineligibility contention should be interpreted as a position about whether any portion of the Asserted Claims are limiting or not. Further, by submitting this ineligibility contention, Forcepoint does not waive and hereby expressly reserves its right to raise invalidity defenses including, but not limited, to defenses under 35 U.S.C. §§ 102, 103, and/or 112.

Discovery in this case is ongoing and, accordingly, this ineligibility contention is not to be considered final. Forcepoint reserves all rights to revise, amend, or supplement this ineligibility claim at a later date as discovery progresses, if the Court issues further claim construction rulings, or if Plaintiffs amend their Infringement Contentions.

VIII. INVALIDITY CONTENTIONS FOR THE '243 PATENT

A. General State of the Art at the Time of the Alleged Invention

The prior art references identified in these Invalidity Contentions, and the "References Cited" on the face of the '243 Patent, may provide background and context pertinent to the teachings in, and interpretation of, the prior art referenced by the attached claim charts. Forcepoint may rely upon that prior art, including the "References Cited" on the face of the '243 Patent, to demonstrate the general state of the art at the time of the alleged inventions and what one of ordinary skill in the art would have understood at a time prior to the date of the alleged invention of the Asserted Claims. This prior art is exemplary only and is not in any way intended to limit the scope of what one of ordinary skill in the art would have understood at the times of the alleged inventions. Forcepoint reserves the right to rely upon additional prior art, information, and/or

knowledge to demonstrate what one of ordinary skill would have understood at any time prior to the date of alleged invention of the Asserted Claims.

B. Claim Charts

Pursuant to Section II, Paragraph 4 of the Order, the claim charts attached in Appendix A as Exhibits 243-F-1 through 243-F-29 identify where each limitation of the Asserted Claims of the '243 Patent is found in the prior art.

C. Identification of the Prior Art

Based on Plaintiffs' Preliminary Infringement Contentions and authorized supplements thereto, Forcepoint identifies prior art below and in Appendix A as Exhibits 243-F-1 through 243-F-29, which contains charts disclosing the identity of each item of prior art that anticipates each claim and/or renders it obvious. As shown in Appendix A as Exhibits 243-F-1 through 243-F-29 and below, Forcepoint has identified each prior art reference by its number, country of origin, author, and date of issue (where applicable). Forcepoint notes that it has applied the prior art in accordance with Plaintiffs' improper assertions of infringement and improper applications of the claims. Forcepoint does not agree with Plaintiffs' application of the claims and denies infringement.

Forcepoint further contends that all claims that are anticipated by a particular reference are also rendered obvious by that same reference alone, in combination with the other references, and/or in combination with the knowledge of a person of ordinary skill in the art. Forcepoint reserves the right to rely upon any combination of the charted prior art under 35 U.S.C. § 103, yet Forcepoint has also identified exemplary obviousness combinations in Section III.E, *infra*.

	System and/or product art received pursuant to Forcepoint’s subpoena to Sophos Ltd. (dated October 31, 2023)

’243 Patent Additional Prior Art/Background Art
U.S. Patent No. 7,673,341 (“Kramer 341”)
U.S. Patent No. 7,818,800 (“Lemley”)
U.S. Patent No. 8,495,743 (“Kraemer”)
U.S. Patent No. 8,205,261 (“Andruss 261”)
U.S. Patent No. 7,854,006 (“Andruss 006”)
U.S. Patent No. 7,765,592 (“Wang”)

’243 Patent Additional Prior Art/Background Art
U.S. Patent No. 7,448,084 (“Apap”)
U.S. Patent No. 6,973,577 (“Kouznetsov”)
U.S. Patent No. 8,090,816 (“Deshmukh”)
U.S. Patent Application Publication No. 2007/0240212 (“Matalytski”)
U.S. Patent Application Publication No. 2005/0108562 (“Khazan”)
U.S. Patent Application Publication No. 2007/0006304 (“Kramer 304”)
Rabek, Jesse C., et al. “Detection of injected, dynamically generated, and obfuscated malicious code.” *Proceedings of the 2003 ACM workshop on Rapid malcode*. 2003. (“Rabek”)
Moffie, Micha, and David Kaeli. “ASM: application security monitor.” *ACM SIGARCH Computer Architecture News* 33.5 (2005): 21-26. (“Moffie”)
Chari, Suresh N., and Pau-Chen Cheng. “BlueBox: A policy-driven, host-based intrusion detection system.” *ACM Transactions on Information and System Security (TISSEC)* 6.2 (2003): 173-200. (“Chari”)
Vasudevan, Amit, and Ramesh Yerraballi. “Spike: engineering malware analysis tools using unobtrusive binary-instrumentation.” *Proceedings of the 29th Australasian Computer Science Conference-Volume 48*. 2006. (“Vasudevan”)

Furthermore, with respect to the ’243 Patent, under pre-AIA 35 U.S.C. §§ 102(a), (b), and (g)(2), Forcepoint reserves the right to identify additional prior art systems developed prior to April 20, 2006. *See, e.g.*, *Intell. Ventures II LLC v. FedEx Corp.*, No. 2:16-CV-00980-JRG, 2019 WL 1434656, at *8-11 (E.D. Tex. Mar. 29, 2019). Discovery is ongoing, and Forcepoint reserves the right to amend the Invalidity Contentions herein based on third-party discovery obtained.

D. Anticipation

At least under Plaintiffs’ apparent infringement theory, the Asserted Claims of the ’243 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by the references as set forth in the attached claim charts. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 1-14 of the ’243 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Muttik as set

forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-14 of the '243 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Szor as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-14 of the '243 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Costea as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-14 of the '243 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Jordan as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-14 of the '243 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Polyakov 482 as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-14 of the '243 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Polyakov 636 as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-14 of the '243 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by English as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-14 of the '243 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Thomas as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-14 of the '243 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Rothwell as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-14 of the '243 Patent are anticipated, either expressly or inherently as

understood by a person having ordinary skill in the art, by Hartrell 957 as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-14 of the '243 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Fan as set forth in the attached claim chart. At least under Plaintiffs' apparent infringement theory, Asserted Claims 1-14 of the '243 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Mandujano as set forth in the attached claim chart.

E. Obviousness

At least under Plaintiffs' apparent infringement theory, the Asserted Claims of the '243 Patent are rendered obvious by the references identified in the attached claim charts, either alone or in the combinations with other prior art references as identified below. Forcepoint contends that one of ordinary skill in the art, at the time of the alleged invention of the Asserted '243 Patent Claims, would have been motivated to combine the references disclosed herein in such a way to reach the alleged inventions. In certain instances, the suggested obviousness combinations are provided in the alternative to Forcepoint's anticipation contentions, which shall not be construed to suggest that any reference included in the combinations is not by itself anticipatory. The combinations evidencing teachings, suggestions, and/or motivations to combine the prior-art references in a way that renders the Asserted Claims obvious are merely exemplary.

Forcepoint reserves the right to amend these Contentions and prior art combinations in light of new information that may arise from third parties related to additional malware detection and containment systems. The following list of references are also evidence of the knowledge of POSITA at the time of the alleged invention of the '243 Patent: Kramer 341, Lemley, Kraemer, Andruss 261, Andruss 006, Wang, Apap, Kouznetsov, Deshmukh, Matalytski, Khazan, Kramer 304, Rabek, Moffie, Chari, Vasudevan.

One of ordinary skill in the art would be motivated to combine these references in the above combinations for at least the following reasons. One of ordinary skill in the art would have

understood that each of these references are in the same field of endeavor, namely methods and devices relating to computer security. *See, e.g.*, Muttik at 1:9-13; Costea at [0001]; Jordan at Abstract; Polyakov 482 at Abstract; Polyakov 636 at Abstract; English at Abstract; Thomas at 1:8-10; Rothwell at 1:7-12; Hartrell 957 at [0003]; Fan at 1:6-9; Friedrichs at Abstract; Scrimsher at [0001]; Pantuso at Abstract; Bromwich at Abstract; Kronenberg at [0003]; Repasi at Abstract; Huang at Abstract; Masters at Abstract; Gladstone at Abstract; Piccard 826 at [0001]; Moran at 2:10-12; Sekiguchi at Abstract; Hartrell 659 at Abstract; Piccard 951 at Abstract; Szor at Abstract; Flores at Abstract; Li at Abstract; Mandujano at Abstract; SurfControl (Exhibit 243-F-29) at 4–9 (citing 2005 MS Windows Guide at 1; 2003 Evaluators' Guide at 5–6, 10; 2006 Email Filter Datasheet at 2; Spyware Factsheet at 1–2; 2004 Anti-Spam Agent Datasheet at 2; 2004 Press Release).

One of ordinary skill in the art would have recognized that these references are directed to addressing the same problem, in particular, improving computer security. *See, e.g.*, Muttik at 1:9-13; Costea at [0007]; Jordan at 2:15-21; Polyakov 482 at 2:38-55; Polyakov 636 at 2:13-29; English at 2:51-57; Thomas at 3:44-64; Rothwell at 2:53-67; Hartrell 957 at [0001]-[0004]; Fan at 2:29-45; Friedrichs at [0002]; Scrimsher at [0008]; Pantuso at 1:7-9; Bromwich at 1:8-10; Kronenberg at [0006]; Repasi at [0001]; Huang at [0005]; Masters at 1:6-10; Gladstone at 1:36-53; Piccard 826 at [0007]; Moran at 6:4-22; Sekiguchi at [0001]; Hartrell 659 at 1:50-64; Piccard 951 at [0001]; Szor at 1:7-9; Flores at 2:1-17; Li at Introduction; Mandujano at Introduction; SurfControl (Exhibit 243-F-29) at 4–9 (citing 2005 MS Windows Guide at 1; 2003 Evaluators' Guide at 5–6, 10; 2006 Email Filter Datasheet at 2; Spyware Factsheet at 1–2; 2004 Anti-Spam Agent Datasheet at 2; 2004 Press Release).

Further, the Asserted Claims of the ’243 Patent contain merely a duplication of concepts known in the prior art and have no patentable significance given that no unexpected results occur—*i.e.* the patentee merely combines known prior art elements according to known methods to yield predictable results. For example, the prior art references describe methods of detecting malicious software and computer programs and the origins of such software and computer programs. *See, e.g.*, Muttik at 1:48-4:12; Costea at [0006]-[0016]; Jordan at 1:8-2:21; Polyakov 482 at 2:38-3:46; Polyakov 636 at 5:54-7:42; English at 2:51-4:10; Thomas at 2:15-3:59; Rothwell at 1:6-2:67; Hartrell 957 at [0004]-[0014]; Fan at 1:6-5:44; Friedrichs at [0018]-[0019]; Scrimsher at [0001]-[0003]; Pantuso at 1:7-3:51; Bromwich at 1:8-2:34; Kronenberg at [0002]-[0006]; Repasi at [0001], [0019]-[0026]; Huang at [0002]-[0011]; Masters at 4:45-5:23; Gladstone at 3:13-8:13; Piccard 826 at [0001]-[0018]; Moran at 16:3-8; Sekiguchi at [0001]-[0013]; Hartrell 659 at 1:6-2:59; Piccard 951 at [0002]-[0007]; Szor at 1:58-5:6; Flores at 2:1-3:58; Li at 1–3; Mandujano at 3, 34–57; SurfControl (Exhibit 243-F-29) at 4–9 (citing 2005 MS Windows Guide at 1; 2003 Evaluators’ Guide at 5–6, 10; 2006 Email Filter Datasheet at 2; Spyware Factsheet at 1–2; 2004 Anti-Spam Agent Datasheet at 2; 2004 Press Release).

The prior art references further describe “monitoring, using a kernel-mode driver, the computer for activity that is indicative of pestware, wherein the monitoring includes monitoring API calls and storing a history of at least a portion of the API calls in an activity log.” *See, e.g.*, Muttik at 1:31-5:15; Costea at [0007]-[0008], [0018]-[0027]; Jordan at 5:66-6:43; Polyakov 482 at 2:38-5:16; Polyakov 636 at 3:10-6:20; English at 3:65-5:61; Thomas at 6:1-9:62; Rothwell at 3:1-6:11, 14:13-17:51; Hartrell 957 at [0004], [0014]-[0027]; Fan at 6:19-11:56; Friedrichs at [0008]-[0029]; Scrimsher at [0026]-[0051]; Pantuso at 1:57-4:46; Bromwich at 2:10-6:11; Kronenberg at [0006]-[0029]; Repasi at [0004]-[0060]; Huang at [0004]-[0029]; Masters at 4:51-

7:45; Gladstone at 3:13-6:61; Piccard 826 at [0007]-[0022]; Moran at 16:3-21:8; Sekiguchi at [0007]-[0011]; Hartrell 659 at 3:59-6:59; Piccard 951 at [0014]-[0024]; Szor at 5:18-7:29; Flores at 3:5-6:30; Li at 1–9; Mandujano at 27–66; SurfControl (Exhibit 243-F-29) at 9–13 (citing 2003 Evaluators' Guide at 5, 19–20, 23; 2003 Email Filter Reviewer's Guide at 6–7; 2006 Virtual Control Agent Article).

The prior art references further describe "analyzing, heuristically, computer activity to determine whether one or more weighted factors associated with an activity exceeds a threshold so as to arrive at a determination that the activity is indicative of pestware." *See, e.g.*, Muttik at 1:23-2:53, 5:30-6:48; Costea at [0024]-[0035]; Jordan at 1:56-4:61; Polyakov 482 at 5:42-10:48; Polyakov 636 at 7:55-11:37; English at 3:65-5:61; Thomas at 7:56-11:63; Rothwell at 1:37-5:61, 16:4-67; Hartrell 957 at [0003], [0014]-[0038]; Fan at 2:62-9:66; Friedrichs at [0019]-[0039]; Scrimsher at [0040]-[0042]; Pantuso at 2:1-5, 4:47-62; Bromwich at 5:11-9:7; Kronenberg at [0006]-[0029]; Repasi at [0015]-[0055]; Huang at [0005]-[0029], [0056]; Masters at 3:44-8:31; Gladstone at 5:66-11:67; Piccard 826 at [0006]-[0024]; Moran at 17:4-28:3; Sekiguchi at [0004]-[0011]; Hartrell 659 at 2:39-11:9; Piccard 951 at [0015]-[0022]; Szor at 3:34-7:29; Flores at 3:5-7:17; Li at 1–10; Mandujano at 18, 38–61, 110–114; SurfControl (Exhibit 243-F-29) at 13–17 (citing 2003 Evaluators' Guide at 8, 10, 13, 41; 2006 Virtual Control Agent Article; Anti-Virus Agent Datasheet at 1; RBOC Update Article; 2004 Anti-Spam Agent Datasheet at 2).

The prior art references further describe "identifying, based upon the activity, an object residing on the computer that is a suspected pestware object." *See, e.g.*, Muttik at 3:22-31, 5:5-15; Costea at [0024]-[0035]; Jordan at 1:56-7:24; Polyakov 482 at 5:42-10:48; Polyakov 636 at 7:55-13:59; English at 3:65-5:61; Thomas at 7:56-11:63; Rothwell at 1:37-5:61, 16:4-67; Hartrell 957 at [0004], [0014]-[0027]; Fan at 5:6-11:31, 12:36-16:16; Friedrichs at [0019]-[0039]; Scrimsher

at [0040]-[0042]; Pantuso at 3:43-4:62; Bromwich at 2:29-9:7; Kronenberg at [0006]; Repasi at [0019]-[0120]; Huang at [0005]-[0029], [0056]; Masters at 3:44-9:45; Gladstone at 7:10-13:12; Piccard 826 at [0006]-[0024]; Moran at 16:22-27:12; Sekiguchi at [0004]-[0011]; Hartrell 659 at 4:18-11:9; Piccard 951 at [0015]-[0022]; Szor at 3:34-6:22; Flores at 2:1-4:25; Li at 2–10; Mandujano at 13, 38–61, 110–114; SurfControl (Exhibit 243-F-29) at 17–20 (citing 2003 Evaluators' Guide at 6; Spyware Factsheet at 2).

The prior art references further describe "accessing, in response to the identifying an object, at least a portion of a recorded history of externally networked sources that the computer received files from so as to identify a reference to an identity of a particular externally networked source that the suspected pestware object originated from." *See, e.g.*, Muttik at 1:66-3:31, 5:57-6:16; Costea at [0016]-[0023], [0036]-[0039]; Jordan at 2:15-3:50; Polyakov 482 at 5:1-11:40; Polyakov 636 at 3:10-5:53, 9:41-11:62; English at 4:34-6:23; Thomas at 6:26-10:7; Rothwell at 8:7-9:60, 21:22-22:17; Hartrell 957 at [0014]-[0025]; Fan at 5:16-12:46; Friedrichs at [0008]-[0047]; Scrimsher at [0027]-[0028]; Pantuso at 2:18-5:56; Bromwich at 6:12-9:60; Kronenberg at [0006]-[0023]; Repasi at [0013]-[0079]; Huang at [0003]-[0048]; Masters at 1:45-7:12; Gladstone at 4:13-15:15; Piccard 826 at [0015]-[0022]; Moran at 16:3-24:3; Sekiguchi at [0007]-[0012]; Hartrell 659 at 3:1-10:50; Piccard 951 at [0015]-[0028]; Szor at 4:62-7:41; Flores at 6:13-8:19; Li at 2–9; Mandujano at 7, 37–61, 88, 110; SurfControl (Exhibit 243-F-29) at 20–24 (citing 2003 Evaluators' Guide at 6, 9, 20–21; 2005 Report Central Datasheet at 3; 2006 Web Filter Datasheet at 4; Spyware Factsheet at 2).

The prior art references further describe "reporting the identity of the particular externally networked source to an externally networked pestware research entity so as to enable the externally networked pestware research entity to research whether the particular externally networked source

is a source of pestware." *See, e.g.*, Muttik at 3:6-6:17; Costea at [0006], [0020]-[0039]; Jordan at 2:15-5:30; Polyakov 482 at 5:17-9:35; Polyakov 636 at 9:26-12:56; English at 5:49-61; Thomas at 7:51-9:32; Rothwell at 21:49-24:29; Hartrell 957 at [0014]-[0037]; Fan at 5:45-62, 11:17-65; Friedrichs at [0025]-[0039]; Scrimsher at [0025]-[0039]; Pantuso at 2:38-6:16; Bromwich at 1:59-2:6, 5:11-9:60; Kronenberg at [0006]-[0031]; Repasi at [0017]-[0023], [0172]-[0174]; Huang at [0005]-[0007]; Masters at 1:45-7:12; Gladstone at 6:13-15:15; Piccard 826 at [0015]-[0023]; Moran at 21:9-25, 64:17-65:5; Sekiguchi at [0013]-[0015]; Hartrell 659 at 5:2-10:50; Piccard 951 at [0018]-[0028]; Szor at 6:23-7:41; Flores at 2:18-7:30; Li at 6–10; Mandujano at 12, 59–86, 113–114; SurfControl (Exhibit 243-F-29) at 24–27 (citing 2003 Evaluators' Guide at 35, 41; Anti-Virus Agent Datasheet at 1; 2005 Report Central Datasheet at 3).

Other examples of these concepts are cited in the attached charts for the above references. *See* Exs. 243-F-1 through 243-F-29. It would have been known and simple to take a prior art for malware detection and neutralization to analyze the origin of suspicious objects, and it would have been obvious to a POSITA to try this. *Id.* It would have also yielded predictable results in the context of improving computer security. *Id.*

Forcepoint is not aware of any secondary considerations supporting non-obviousness of the '243 Patent claims. To the extent Plaintiffs seek to introduce any alleged secondary considerations in the future, Forcepoint reserves the right to respond at that time.

F. Invalidity Under Section 112

Pursuant to Section II, Paragraph 4 of the Order, Forcepoint provides an identification of the limitations of the '243 Patent that are invalid based on indefiniteness under pre-AIA 35 U.S.C. § 112 ¶ 2, or enablement or written description under pre-AIA 35 U.S.C. § 112 ¶ 1. These Contentions are being proffered without the full benefit of expert disclosure or discovery.

Asserted Claims 1, 2, 3, 5, 6, 8, and 10-14 of the '243 Patent (and all claims which depend from these claims) are indefinite, and thus invalid. "[A] patent is invalid for indefiniteness if its claims, read in light of the specification delineating the patent, and the prosecution history, fail to inform, with reasonable certainty, those skilled in the art about the scope of the invention." *Nautilus, Inc. v. Biosig Instruments, Inc.*, 572 U.S. 898, 901 (2014). For example, as applied in Plaintiffs' Infringement Contentions, the terms "indicative of pestware," "suspected pestware object," "activity log," "exceeds a threshold", "the identity of the particular externally networked source," "the group consisting of an I.P. address and a URL," "the group consisting of an activity log, a browser history," "reference to an identity of a particular externally networked source that the suspected pestware object originated from," "activity monitor," "heuristics module," "research portion," and "reporting portion" are indefinite because each of these phrases not only is subjective but also does not have a meaning that can be clearly determined from the patent, and thus fails to put the public on notice of what is and is not covered by these claims.

Asserted Claims 1, 3, 5, 6, 11, 12, and 14 of the '243 Patent are invalid under § 112 ¶ 1, because the specification as filed does not contain a sufficient written description supporting those claims. For example, the patent disclosure would not lead a person of ordinary skill in the art to understand that the named inventor had possession of the purported inventions as claimed and in view of Plaintiffs' contentions. For example, Asserted Claims 1, 3, 5, 6, 11, 12, and 14 (and all claims that depend from these claims) fail to satisfy the requirements of 35 U.S.C. § 112 for at least the following reasons: the '243 Patent fails to provide an adequate written description of the phrases "activity log," "the identity of the particular externally networked source," "reference to an identity of a particular externally networked source that the suspected pestware object

originated from," "activity monitor," "heuristics module," "research portion," and "reporting portion" as applied in Plaintiffs' Infringement Contentions.

The aforementioned claims are invalid because they are not enabled or described by the specification of the '243 Patent. The subject matter of these claims, as described above, are not sufficiently shown in the specification of the '243 Patent. The subject matter of these claims, as described above, are not sufficiently enabled because they do not teach one skilled in the art how to make and use the alleged invention from the specification of the '243 Patent. For example, the '243 Patent fails to enable the following and thus, Asserted Claims 1, 3, 5, 6, 11, 12, and 14 of the '243 Patent are invalid: "activity log," "the identity of the particular externally networked source," "reference to an identity of a particular externally networked source that the suspected pestware object originated from," "activity monitor," "heuristics module," "research portion," and "reporting portion." The foregoing phrases are not described in such a way that one of ordinary skill in the art could implement it to achieve the results sought by the individual named on the face of the '243 Patent as the inventor. The foregoing phrases are not described in such a way that a person having ordinary skill in the art at the time of the alleged invention would have understood that the individual named as the inventor on the face of the '243 Patent was in possession of the claimed subject matter. The Asserted Claims of the '243 Patent also do not comply with § 112 because they do not set forth what the applicant regards is the invention.

A more detailed basis for the above indefiniteness, written description, and enablement defenses may be set forth in any expert report(s) on invalidity to be served on Plaintiffs in accordance with the Court's Scheduling Order.

G. Invalidity Under Section 101

Pursuant to Section II, Paragraph 4 of the Order, Forcepoint provides an identification of the claims of the '243 Patent they contend are directed to ineligible subject matter under pre-AIA 35 U.S.C. § 101. These Contentions are being proffered without expert disclosure or discovery.

Each Asserted Claim of the '243 Patent is directed to ineligible subject matter under 35 U.S.C. § 101. First, the Asserted Patent Claims of the '243 Patent are directed to the long-standing abstract idea of tracing where harmful content originated (*i.e.*, the abstract idea and mental process of observing harm and seeking the source). The Asserted Patent Claims of the '243 Patent merely take mental processes and human activities (*e.g.*, monitoring for harm, seeking the source of the harm, and telling others about the harm) and tie those processes and activities to a computer. For example, Claim 1 of the '243 Patent is directed to "monitoring . . . analyzing . . . identifying . . . accessing . . . and reporting the identity of [a] particular externally networked source to an externally networked pestware research entity[.]" '243 Patent cl. 1; *see also id.* at 9:63-65 ("[T]he present invention provides, among other things, a system and method for identifying a source of pestware or suspected pestware on a computer."). Accordingly, the Asserted Claims are directed to basic concepts of monitoring activities on a computer and identifying the source of those activities.

The specification of the '243 Patent confirms that the Asserted Claims are directed to those basic concepts. *See, e.g.*, *id.* at 2:17-19 ("The present invention can provide a system and method for researching an identity of a source of activity that is indicative of pestware."); 3:34-40 ("[T]he research module 108 is configured to research the activity log 120 and/or the N files 130, which include information (e.g., historical logs) relating to events on the computer 100, to identify a source of the pestware 122, 124 or pestware-related activities, which may be reported by the reporting module 114 to a centralized data store for subsequent pestware management purposes.");

4:12-15 ("The basic functions of the detection engine 102 is to compare files, processes and registry entries on the protected computer against known pestware definitions and characteristics."); 5:22-29 ("The activity monitor 116 in several embodiments monitors activities on the computer and stores information about the activities in the activity log 120 so as to assist the research module 108 in identifying activities associated with pestware and the source of the pestware. In some embodiments, for example, the activity log 120 includes a list of processes that are running on the protected computer and the files that are associated with the processes."); 8:33-38 ("As depicted in FIG. 4, if the source of the suspicious object(s) is identified (Block 408), then the source of the suspicious object(s) is then reported (e.g., to a pestware research entity). In this way, the suspicious objects and the web sites originating the suspicious objects may be further researched to establish the extent to which they may be a threat.").

Second, the Asserted Claims of the '243 Patent do not contain any inventive concept as they combine standard, generic, and well-known components in a conventional way to arrive at the claimed invention. The '243 Patent describes determining the source of computer programs using conventional computing devices, computer programs, computer objects, storage media, and networks well-known in the prior art. *See, e.g.*, *id.* at 1:35-36 ("The present invention relates to computer system management."); *id.* at 3:5-7 ("Those of skill in the art can easily adapt these implementations for other types of operating systems or computer systems."). Although the embodiments of the invention described with reference to the drawings comprise computer processes performed in computer apparatus and computer apparatus itself, the invention also extends to computer programs, particularly computer programs on or in a carrier, adapted for putting the invention into practice. Considered individually or as an ordered combination, the claim limitations recite nothing more than the abstract idea of identifying the origin or source of

code or a computer program. The program may be in the form of processor-executable instructions such as in partially compiled form, or in any other form suitable for use in the implementation of the processes according to the invention. The carrier may be any entity or device capable of carrying the program. For example, the carrier may comprise a non-transitory computer readable medium including processor-executable instructions. *See* '243 Patent at claim 12. Simply identifying an overarching desirable outcome without specifying any technical improvements over the prior art to achieve that outcome does not rise to the level of an inventive and, thus, patent-eligible concept. *See Intell. Ventures I LLC v. Erie Indem. Co.*, 850 F.3d 1315, 1330–32 (Fed. Cir. 2017) ("The recited use of a mobile interface and pointers to retrieve user information evidences nothing more than a 'generic computer implementation' of the abstract idea that is insufficient to transform a patent-ineligible abstract idea into a patent-eligible invention."); *Intell. Ventures I LLC v. Capital One Bank (USA)*, 792 F.3d 1363, 1367–68 (Fed. Cir. 2015) (claims directed to internet-based communications recite generic computer components and do not claim inventive concepts). Moreover, the prior art cited throughout Forcepoint's Contentions, as well as the patents themselves and the prior art cited therein, demonstrate that each claim element in every Asserted Claim is directed to well-understood, routine, and conventional computer security components and techniques. The remaining Asserted Claims merely apply those conventional and generic computer components and techniques in a selected physical or technical environment—an environment where they had already long been used by those of ordinary skill as the prior art referenced herein reflects. Thus, the Asserted Claims of the '243 Patent fail to add anything to the underlying abstract idea sufficient to transform them into patent-eligible subject matter.

Furthermore, at least under Plaintiffs' apparent infringement theory, as set forth in their Infringement Contentions, the Asserted Claims of the '243 Patent are ineligible because they

would preempt the entire field of tracing where certain harmful content originated, that is, receiving information, analyzing information, and outputting a result.

This ineligibility contention is based in whole or in part on Forcepoint's present understanding of the Asserted Claims of the '243 Patent, their current construction of the claims, and/or Plaintiffs' apparent construction of the claims in their current Infringement Contentions. Forcepoint is not adopting Plaintiffs' apparent claim construction, nor admitting to the accuracy of any particular claim construction. To the extent that Plaintiffs' apparent claim construction or applications thereof are reflected in this Contention, nothing herein should be construed as an admission that Forcepoint agrees with Plaintiffs' apparent claim construction or Plaintiffs' application of that claim construction in Plaintiffs' current Infringement Contentions. Further, claim construction is not necessary to determine that the Asserted Claims of the '243 Patent are ineligible.

Forcepoint's Contentions regarding ineligibility under 35 U.S.C. § 101 may be based on Plaintiffs' allegations of infringement. Forcepoint does not necessarily agree with the interpretations set forth in Plaintiffs' Infringement Contentions and thus this ineligibility contention is not an admission that the accused products meet any particular claim element or infringe the Asserted Claim. In addition, nothing in this ineligibility contention should be interpreted as a position about whether any portion of the Asserted Claims are limiting or not. Further, by submitting this ineligibility contention, Forcepoint does not waive and hereby expressly reserves its right to raise invalidity defenses including, but not limited, to defenses under 35 U.S.C. §§ 102, 103, and/or 112.

Discovery in this case is ongoing and, accordingly, this ineligibility contention is not to be considered final. Forcepoint reserves all rights to revise, amend, or supplement this ineligibility

claim at a later date as discovery progresses, if the Court issues further claim construction rulings, or if Plaintiffs amend their Infringement Contentions.

IX. INVALIDITY CONTENTIONS FOR THE '932 PATENT

A. General State of the Art at the Time of the Alleged Inventions

The prior art references identified in these Invalidity Contentions, and the "References Cited" on the face of the '932 Patent, may provide background and context pertinent to the teachings in, and interpretation of, the prior art referenced by the attached claim charts. Forcepoint may rely upon that prior art, including the "References Cited" on the face of the '932 Patent, to demonstrate the general state of the art at the time of the alleged inventions and what one of ordinary skill in the art would have understood at a time prior to the date of the alleged invention of the Asserted Claims. This prior art is exemplary only and is not in any way intended to limit the scope of what one of ordinary skill in the art would have understood at the times of the alleged inventions. Forcepoint reserves the right to rely upon additional prior art, information, and/or knowledge to demonstrate what one of ordinary skill would have understood at any time prior to the date of alleged invention of the Asserted Claims.

B. Claim Charts

Pursuant to Section II, Paragraph 4 of the Order, the claim charts attached in Appendix A as Exhibits 932-G-1 through 932-G-28 identify where each limitation of the Asserted Claims of the '932 Patent is found in the prior art.

C. Identification of the Prior Art

Based on Plaintiffs' Preliminary Infringement Contentions and authorized supplements thereto, Forcepoint identifies prior art below and in Appendix A as Exhibits 932-G-1 through 932-G-28, which contains charts disclosing the identity of each item of prior art that anticipates each claim and/or renders it obvious. As shown in Appendix A as Exhibits 932-G-1 through 932-G-28

and below, Forcepoint has identified each prior art reference by its number, country of origin, author, and date of issue (where applicable). Forcepoint notes that it has applied the prior art in accordance with Plaintiffs' improper assertions of infringement and improper applications of the claims. Forcepoint does not agree with Plaintiffs' application of the claims and denies infringement.

Forcepoint further contends that all claims that are anticipated by a particular reference are also rendered obvious by that same reference alone, in combination with the other references, and/or in combination with the knowledge of a person of ordinary skill in the art. Forcepoint reserves the right to rely upon any combination of the charted prior art under 35 U.S.C. § 103, yet Forcepoint has also identified exemplary obviousness combinations in Section IV.E, *infra*.

’932 Patent Additional Prior Art/Background Art
Vasudevan, Amit, and Ramesh Yerraballi. “Spike: engineering malware analysis tools using unobtrusive binary-instrumentation.” *Proceedings of the 29th Australasian Computer Science Conference-Volume 48*. 2006. (“Vasudevan”)

Furthermore, with respect to the ’932 Patent, under pre-AIA 35 U.S.C. §§ 102(a), (b), and (g)(2), Forcepoint reserves the right to identify additional prior art systems developed prior to April 20, 2006. *See, e.g.*, *Intell. Ventures II LLC v. FedEx Corp.*, No. 2:16-CV-00980-JRG, 2019 WL 1434656, at *8-11 (E.D. Tex. Mar. 29, 2019). Discovery is ongoing, and Forcepoint reserves the right to amend the Invalidity Contentions herein based on third-party discovery.

D. Anticipation

At least under Plaintiffs’ apparent infringement theory, the Asserted Claims of the ’932 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by the references as set forth in the attached claim charts. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 1-15 of the ’932 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Muttik as set forth in the attached claim chart. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 1-15 of the ’932 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Costea as set forth in the attached claim chart. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 1-15 of the ’932 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Jordan as set forth in the attached claim chart. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 1-15 of the ’932 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Polyakov 482 as set forth in the attached claim chart. At least under Plaintiffs’ apparent infringement theory, Asserted

Claims 1-15 of the ’932 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Polyakov 636 as set forth in the attached claim chart. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 1-15 of the ’932 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by English as set forth in the attached claim chart. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 1-15 of the ’932 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Thomas as set forth in the attached claim chart. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 1-15 of the ’932 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Rothwell as set forth in the attached claim chart. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 1-15 of the ’932 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Hartrell 957 as set forth in the attached claim chart. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 1-15 of the ’932 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Fan as set forth in the attached claim chart. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 1-15 of the ’932 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Mandujano as set forth in the attached claim chart.

E. Obviousness

At least under Plaintiffs’ apparent infringement theory, the Asserted Claims of the ’932 Patent are rendered obvious by the references identified in the attached claim charts, either alone or in the combinations with other prior art references as identified below. Forcepoint contends that one of ordinary skill in the art, at the time of the alleged invention of the Asserted ’932 Patent Claims, would have been motivated to combine the references disclosed herein in such a way to

reach the alleged inventions. In certain instances, the suggested obviousness combinations are provided in the alternative to Forcepoint's anticipation contentions, which shall not be construed to suggest that any reference included in the combinations is not by itself anticipatory. The combinations evidencing teachings, suggestions, and/or motivations to combine the prior-art references in a way that renders the Asserted Claims obvious are merely exemplary.

Forcepoint reserves the right to amend these Contentions and prior art combinations in light of new information that may arise from third parties related to additional malware detection and containment systems. The following list of references are also evidence of the knowledge of POSITA at the time of the alleged invention of the ’932 Patent: Kramer 341, Lemley, Kraemer, Andruss 261, Andruss 006, Wang, Apap, Kouznetsov, Deshmukh, Matalytski, Khazan, Kramer 304, Rabek, Moffie, Chari, Vasudevan.

One of ordinary skill in the art would be motivated to combine these references in the above combinations for at least the following reasons. One of ordinary skill in the art would have understood that each of these references are in the same field of endeavor, namely methods and devices relating to computer security. *See, e.g.*, Muttik at 1:9-13; Costea at [0001]; Jordan at Abstract; Polyakov 482 at Abstract; Polyakov 636 at Abstract; English at Abstract; Thomas at 1:8-10; Rothwell at 1:7-12; Hartrell 957 at [0003]; Fan at 1:6-9; Friedrichs at Abstract; Scrimsher at [0001]; Pantuso at Abstract; Bromwich at Abstract; Kronenberg at [0003]; Repasi at Abstract; Huang at Abstract; Masters at Abstract; Gladstone at Abstract; Piccard 826 at [0001]; Moran at 2:10-12; Sekiguchi at Abstract; Hartrell 659 at Abstract; Piccard 951 at Abstract; Kidron at Abstract; Li at Abstract; Mandujano at Abstract; SurfControl (Exhibit 932-G-28) at 4–9 (citing 2005 MS Windows Guide at 1; 2003 Evaluators' Guide at 5–6, 10; 2006 Email Filter Datasheet at 2; Spyware Factsheet at 1–2; 2004 Anti-Spam Agent Datasheet at 2; 2004 Press Release).

One of ordinary skill in the art would have recognized that these references are directed to addressing the same problem, in particular, improving computer security. *See, e.g.*, Muttik at 1:9-13; Costea at [0007]; Jordan at 2:15-21; Polyakov 482 at 2:38-55; Polyakov 636 at 2:13-29; English at 2:51-57; Thomas at 3:44-64; Rothwell at 2:53-67; Hartrell 957 at [0001]-[0004]; Fan at 2:29-45; Friedrichs at [0002]; Scrimsher at [0008]; Pantuso at 1:7-9; Bromwich at 1:8-10; Kronenberg at [0006]; Repasi at [0001]; Huang at [0005]; Masters at 1:6-10; Gladstone at 1:36-53; Piccard 826 at [0007]; Moran at 6:4-22; Sekiguchi at [0001]; Hartrell 659 at 1:50-64; Piccard 951 at [0001]; Kidron at 1:16-19; Li at Introduction; Mandujano at Introduction; SurfControl (Exhibit 932-G-28) at 4–9 (citing 2005 MS Windows Guide at 1; 2003 Evaluators' Guide at 5–6, 10; 2006 Email Filter Datasheet at 2; Spyware Factsheet at 1–2; 2004 Anti-Spam Agent Datasheet at 2; 2004 Press Release).

Further, the Asserted Claims of the '932 Patent contain merely a duplication of concepts known in the prior art and have no patentable significance given that no unexpected results occur—*i.e.* the patentee merely combines known prior art elements according to known methods to yield predictable results. For example, the prior art references describe methods of detecting malicious software and computer programs and the origins of such software and computer programs. *See, e.g.*, Muttik at 1:48-4:12; Costea at [0006]-[0016]; Jordan at 1:8-2:21; Polyakov 482 at 2:38-3:46; Polyakov 636 at 5:54-7:42; English at 2:51-4:10; Thomas at 2:15-3:59; Rothwell at 1:6-2:67; Hartrell 957 at [0004]-[0014]; Fan at 1:6-5:44; Friedrichs at [0018]-[0019]; Scrimsher at [0001]-[0003]; Pantuso at 1:7-3:51; Bromwich at 1:8-2:34; Kronenberg at [0002]-[0006]; Repasi at [0001], [0019]-[0026]; Huang at [0002]-[0011]; Masters at 4:45-5:23; Gladstone at 3:13-8:13; Piccard 826 at [0001]-[0018]; Moran at 16:3-8; Sekiguchi at [0001]-[0013]; Hartrell 659 at 1:6-2:59; Piccard 951 at [0002]-[0007]; Kidron at 3:25-7:22; Li at 1–3; Mandujano at 3, 34–57; SurfControl (Exhibit 932-G-28) at 4–9 (citing 2005 MS Windows Guide at 1; 2003 Evaluators' Guide at 5–6, 10; 2006 Email Filter Datasheet at 2; Spyware Factsheet at 1–2; 2004 Anti-Spam Agent Datasheet at 2; 2004 Press Release).

The prior art references further describe "monitoring, using a kernel-mode driver, API call activity on the computer." *See, e.g.*, Muttik at 1:31-5:15; Costea at [0007]-[0008], [0018]-[0027]; Jordan at 5:66-6:43; Polyakov 482 at 2:38-5:16; Polyakov 636 at 3:10-6:20; English at 3:65-5:61; Thomas at 6:1-9:62; Rothwell at 3:1-6:11, 14:13-17:51; Hartrell 957 at [0004], [0014]-[0027]; Fan at 6:19-11:56; Friedrichs at [0008]-[0029]; Scrimsher at [0026]-[0051]; Pantuso at 1:57-4:46; Bromwich at 2:10-6:11; Kronenberg at [0006]-[0029]; Repasi at [0004]-[0060]; Huang at [0004]-[0029]; Masters at 4:51-7:45; Gladstone at 3:13-6:61; Piccard 826 at [0007]-[0022]; Moran at 16:3-21:8; Sekiguchi at [0007]-[0011]; Hartrell 659 at 3:59-6:59; Piccard 951 at [0014]-[0024];

Kidron at 5:1-8:20; Li at 1–9; Mandujano at 27–66; SurfControl (Exhibit 932-G-28) at 9–13 (citing 2003 Evaluators' Guide at 5, 19–20, 23; 2003 Email Filter Reviewer's Guide at 6–7; 2006 Virtual Control Agent Article).

The prior art references further describe "storing information related to the API call activity in a log." *See, e.g.*, Muttik at 1:31-5:15; Costea at [0007]-[0008], [0018]-[0027]; Jordan at 5:66-6:43; Polyakov 482 at 2:38-5:16; Polyakov 636 at 3:10-6:20; English at 3:65-5:61; Thomas at 6:1-9:62; Rothwell at 3:1-6:11, 14:13-17:51; Hartrell 957 at [0004], [0014]-[0027]; Fan at 6:19-11:56; Friedrichs at [0008]-[0029]; Scrimsher at [0026]-[0051]; Pantuso at 1:57-4:46; Bromwich at 2:10-6:11; Kronenberg at [0006]-[0029]; Repasi at [0004]-[0060]; Huang at [0004]-[0029]; Masters at 4:51-7:45; Gladstone at 3:13-6:61; Piccard 826 at [0007]-[0022]; Moran at 16:3-21:8; Sekiguchi at [0007]-[0011]; Hartrell 659 at 3:59-6:59; Piccard 951 at [0014]-[0024]; Kidron at 5:1-8:20; Li at 1–9; Mandujano at 27–66; SurfControl (Exhibit 932-G-28) at 13–20 (citing 2003 Evaluators' Guide at 9, 20–21, 2004 SMTP Guide at 9; 2005 Report Central Datasheet at 3, 2006 Report Central User Guide at 18–19).

The prior art references further describe "analyzing, heuristically, the API call activity to determine whether one or more weighted factors associated with the API call activity exceeds a threshold." *See, e.g.*, Muttik at 1:23-2:53, 5:30-6:48; Costea at [0024]-[0035]; Jordan at 1:56-4:61; Polyakov 482 at 5:42-10:48; Polyakov 636 at 7:55-11:37; English at 3:65-5:61; Thomas at 7:56-11:63; Rothwell at 1:37-5:61, 16:4-67; Hartrell 957 at [0003], [0014]-[0038]; Fan at 2:62-9:66; Friedrichs at [0019]-[0039]; Scrimsher at [0040]-[0042]; Pantuso at 2:1-5, 4:47-62; Bromwich at 5:11-9:7; Kronenberg at [0006]-[0029]; Repasi at [0015]-[0055]; Huang at [0005]-[0029], [0056]; Masters at 3:44-8:31; Gladstone at 5:66-11:67; Piccard 826 at [0006]-[0024]; Moran at 17:4-28:3; Sekiguchi at [0004]-[0011]; Hartrell 659 at 2:39-11:9; Piccard 951 at [0015]-

[0022]; Kidron at 4:41-7:44; Li at 1–10; Mandujano at 18, 38–61, 110–114; SurfControl (Exhibit 932-G-28) at 20–24 (citing 2003 Evaluators' Guide at 8, 10, 13, 41; 2006 Virtual Control Agent Article; Anti-Virus Agent Datasheet at 1; RBOC Update Article; 2004 Anti-Spam Agent Datasheet at 1–2).

The prior art references further describe "identifying, based upon the API call activity, a suspected pestware object on the computer." *See, e.g.*, Muttik at 3:22-31, 5:5-15; Costea at [0024]-[0035]; Jordan at 1:56-7:24; Polyakov 482 at 5:42-10:48; Polyakov 636 at 7:55-13:59; English at 3:65-5:61; Thomas at 7:56-11:63; Rothwell at 1:37-5:61, 16:4-67; Hartrell 957 at [0004], [0014]-[0027]; Fan at 5:6-11:31, 12:36-16:16; Friedrichs at [0019]-[0039]; Scrimsher at [0040]-[0042]; Pantuso at 3:43-4:62; Bromwich at 2:29-9:7; Kronenberg at [0006]; Repasi at [0019]-[0120]; Huang at [0005]-[0029], [0056]; Masters at 3:44-9:45; Gladstone at 7:10-13:12; Piccard 826 at [0006]-[0024]; Moran at 16:22-27:12; Sekiguchi at [0004]-[0011]; Hartrell 659 at 4:18-11:9; Piccard 951 at [0015]-[0022]; Kidron at 3:25-7:55; Li at 2–10; Mandujano at 13, 38–61, 110–114; SurfControl (Exhibit 932-G-28) at 24–28 (citing 2003 Evaluators' Guide at 6; Spyware Factsheet at 2; 2004 Anti-Spam Agent Datasheet at 1–2).

The prior art references further describe "identifying, in response to the identifying the suspected pestware object, a reference to an identity of an externally networked source of the suspected pestware object." *See, e.g.*, Muttik at 1:66-3:31, 5:57-6:16; Costea at [0016]-[0023], [0036]-[0039]; Jordan at 2:15-3:50; Polyakov 482 at 5:1-11:40; Polyakov 636 at 3:10-5:53, 9:41-11:62; English at 4:34-6:23; Thomas at 6:26-10:7; Rothwell at 8:7-9:60, 21:22-22:17; Hartrell 957 at [0014]-[0025]; Fan at 5:16-12:46; Friedrichs at [0008]-[0047]; Scrimsher at [0027]-[0028]; Pantuso at 2:18-5:56; Bromwich at 6:12-9:60; Kronenberg at [0006]-[0023]; Repasi at [0013]-[0079]; Huang at [0003]-[0048]; Masters at 1:45-7:12; Gladstone at 4:13-15:15; Piccard 826 at

[0015]-[0022]; Moran at 16:3-24:3; Sekiguchi at [0007]-[0012]; Hartrell 659 at 3:1-10:50; Piccard 951 at [0015]-[0028]; Kidron at 1:23-7:55; Li at 2–9; Mandujano at 7, 37–61, 88, 110; SurfControl (Exhibit 932-G-28) at 28–30 (citing 2003 Evaluators' Guide at 6, 9; 2005 Report Central Datasheet at 3; 2006 Web Filter Datasheet at 4; Spyware Factsheet at 2).

The prior art references further describe "reporting the identity of the externally networked source to an externally networked pestware research entity, wherein the identity of the externally networked source is selected from a group consisting of an I.P. address, a URL, an email client and a program." *See, e.g.*, Muttik at 1:15-6:17; Costea at [0006], [0020]-[0039]; Jordan at 2:15-5:30; Polyakov 482 at 5:17-11:4; Polyakov 636 at 3:10-13:59; English at 5:2-61; Thomas at 7:51-9:32; Rothwell at 21:22-24:29; Hartrell 957 at [0014]-[0037]; Fan at 5:45-6:41, 11:17-15:40; Friedrichs at [0025]-[0039]; Scrimsher at [0025]-[0039]; Pantuso at 2:38-6:16; Bromwich at 1:59-2:6, 5:11-9:60; Kronenberg at [0006]-[0031]; Repasi at [0017]-[0023], [0172]-[0174]; Huang at [0005]-[0007]; Masters at 1:45-7:12; Gladstone at 6:13-15:15; Piccard 826 at [0015]-[0023]; Moran at 21:9-25, 64:17-65:5; Sekiguchi at [0013]-[0015]; Hartrell 659 at 5:2-10:50; Piccard 951 at [0018]-[0028]; Kidron at 5:5-8:54; Li at 6–10; Mandujano at 12, 59–86, 113–114; SurfControl (Exhibit 932-G-28) at 30–34 (citing 2003 Evaluators' Guide at 8, 12, 25, 30, 35, 41; Anti-Virus Agent Datasheet at 1; 2005 Report Central Datasheet at 3).

Other examples of these concepts are cited in the attached charts for the above references. *See* Exs. 932-G-1 through 932-G-28. It would have been known and simple to take a prior art for malware detection and neutralization to analyze the origin of suspicious objects, and it would have been obvious to a POSITA to try this. *Id.* It would have also yielded predictable results in the context of improving computer security. *Id.*

Forcepoint is not aware of any secondary considerations supporting non-obviousness of the '932 Patent claims. To the extent Plaintiffs seek to introduce any alleged secondary considerations in the future, Forcepoint reserves the right to respond at that time.

F. Invalidity Under Section 112

Pursuant to Section II, Paragraph 4 of the Order, Forcepoint provides an identification of the limitations of the '932 Patent that are invalid based on indefiniteness under pre-AIA 35 U.S.C. § 112 ¶ 2, or enablement or written description under pre-AIA 35 U.S.C. § 112 ¶ 1. These Contentions are being proffered without the full benefit of expert disclosure or discovery.

Asserted Claims 1, 2, 4, 5, 7, 9, 11–13, and 15 of the '932 Patent (and all claims which depend from these claims) are indefinite, and thus invalid. "[A] patent is invalid for indefiniteness if its claims, read in light of the specification delineating the patent, and the prosecution history, fail to inform, with reasonable certainty, those skilled in the art about the scope of the invention." *Nautilus, Inc. v. Biosig Instruments, Inc.*, 572 U.S. 898, 901 (2014). For example, as applied in Plaintiffs' Infringement Contentions, the terms "indicative of pestware," "suspected pestware object," "activity log," "exceeds a threshold," "the identity of the externally networked source," "the group consisting of an I.P. address and a URL," "the group consisting of an activity log, a browser history," "reference to an identity of an externally networked source of the suspected pestware object," "kernel-level monitor," "heuristics module," "research portion," and "reporting portion" are indefinite because each of these phrases not only is subjective but also does not have a meaning that can be clearly determined from the patent, and thus fails to put the public on notice of what is and is not covered by these claims.

Asserted Claims 1, 2, 4, 5, 9, 11–13, 15 of the '932 Patent are invalid under § 112 ¶ 1, because the specification as filed does not contain a sufficient written description supporting those claims. In particular, the patent disclosure would not lead a person of ordinary skill in the art to

understand that the named inventor had possession of the purported inventions as claimed and in view of Plaintiffs' contentions. For example, Asserted Claims 1, 2, 4, 5, 9, 11–13, 15 (and all claims that depend from these claims) fail to satisfy the requirements of 35 U.S.C. § 112 for at least the following reasons: the '932 Patent fails to provide an adequate written description of the phrases "activity log," "the identity of the externally networked source," "reference to an identity of an externally networked source of the suspected pestware object," "kernel-level monitor," "heuristics module," "research portion," and "reporting portion" as applied in Plaintiffs' Infringement Contentions.

The aforementioned claims are invalid because they are not enabled or described by the specification of the '932 Patent. The subject matter of these claims, as described above, are not sufficiently shown in the specification of the '932 Patent. The subject matter of these claims, as described above, are not sufficiently enabled because they do not teach one skilled in the art how to make and use the alleged invention from the specification of the '932 Patent. For example, the '932 Patent fails to enable the following and thus, Asserted Claims 1, 2, 4, 5, 9, 11–13, 15 of the '932 Patent are invalid: "activity log," "the identity of the externally networked source," "reference to an identity of an externally networked source of the suspected pestware object," "kernel-level monitor," "heuristics module," "research portion," and "reporting portion." The foregoing phrases are not described in such a way that one of ordinary skill in the art could implement it to achieve the results sought by the individual named on the face of the '932 Patent as the inventor. The foregoing phrases are not described in such a way that a person having ordinary skill in the art at the time of the alleged invention would have understood that the individual named as the inventor on the face of the '932 Patent was in possession of the claimed subject matter. The Asserted

Claims of the ’932 Patent also do not comply with § 112 because they do not set forth what the applicant regards is the invention.

A more detailed basis for the above indefiniteness, written description, and enablement defenses may be set forth in any expert report(s) on invalidity to be served on Plaintiffs in accordance with the Court’s Scheduling Order.

G. Invalidity Under Section 101

Pursuant to Section II, Paragraph 4 of the Order, Forcepoint provides an identification of the claims of the ’932 Patent they contend are directed to ineligible subject matter under pre-AIA 35 U.S.C. § 101. These Contentions are being proffered without expert disclosure or discovery.

Each Asserted Claim of the ’932 Patent is directed to ineligible subject matter under 35 U.S.C. § 101. First, the Asserted Patent Claims of the ’932 Patent are directed to the long-standing abstract idea of tracing where harmful content originated (*i.e.*, the abstract idea and mental process of observing harm and seeking the source). The Asserted Patent Claims of the ’932 Patent merely take mental processes and human activities (*e.g.*, monitoring for harm, seeking the source of the harm, and telling others about the harm) and tie those processes and activities to a computer. For example, Claim 1 of the ’932 Patent is directed to “monitoring . . . storing . . . analyzing . . . identifying . . . [and] reporting the identity of [a] externally networked source to an externally networked pestware research entity[.]” ’932 Patent cl. 1; *see also id.* at 10:7-9 (“[T]he present invention provides, among other things, a system and method for identifying a source of pestware or suspected pestware on a computer.”). Accordingly, the Asserted Claims are directed to basic concepts of monitoring activities on a computer and identifying the source of those activities.

The specification of the ’932 Patent confirms that the Asserted Claims are directed to those basic concepts. *See, e.g.*, *id.* at 2:24-26 (“The present invention can provide a system and method

for researching an identity of a source of activity that is indicative of pestware."); 3:45-51 ("[T]he research module 108 is configured to research the activity log 120 and/or the N files 130, which include information (e.g., historical logs) relating to events on the computer 100, to identify a source of the pestware 122, 124 or pestware-related activities, which may be reported by the reporting module 114 to a centralized data store for subsequent pestware management purposes."); 4:23-26 ("The basic functions of the detection engine 102 is to compare files, processes and registry entries on the protected computer against known pestware definitions and characteristics."); 5:33-40 ("The activity monitor 116 in several embodiments monitors activities on the computer and stores information about the activities in the activity log 120 so as to assist the research module 108 in identifying activities associated with pestware and the source of the pestware. In some embodiments, for example, the activity log 120 includes a list of processes that are running on the protected computer and the files that are associated with the processes."); 8:43-49 ("As depicted in FIG. 4, if the source of the suspicious object(s) is identified (Block 408), then the source of the suspicious object(s) is then reported (e.g., to a pestware research entity). In this way, the suspicious objects and the web sites originating the suspicious objects may be further researched to establish the extent to which they may be a threat.").

Second, the Asserted Claims of the '932 Patent do not contain any inventive concept as they combine standard, generic, and well-known components in a conventional way to arrive at the claimed invention. The '932 Patent describes determining the source of computer programs using conventional computing devices, computer programs, computer objects, storage media, and networks well-known in the prior art. *See, e.g.*, *id.* at 1:43-44 ("The present invention relates to computer system management."); *id.* at 3:16-18 ("Those of skill in the art can easily adapt these implementations for other types of operating systems or computer systems."). Although the

embodiments of the invention described with reference to the drawings comprise computer processes performed in computer apparatus and computer apparatus itself, the invention also extends to computer programs, particularly computer programs on or in a carrier, adapted for putting the invention into practice. Considered individually or as an ordered combination, the claim limitations recite nothing more than the abstract idea of identifying the source of code or a computer program. The program may be in the form of processor-executable instructions such as in partially compiled form, or in any other form suitable for use in the implementation of the processes according to the invention. The carrier may be any entity or device capable of carrying the program. For example, the carrier may comprise a non-transitory computer readable medium including processor-executable instructions. *See* '932 Patent at claim 12. Simply identifying an overarching desirable outcome without specifying any technical improvements over the prior art to achieve that outcome does not rise to the level of an inventive and, thus, patent-eligible concept. *See Intell. Ventures I LLC v. Erie Indem. Co.*, 850 F.3d 1315, 1330–32 (Fed. Cir. 2017) ("The recited use of a mobile interface and pointers to retrieve user information evidences nothing more than a 'generic computer implementation' of the abstract idea that is insufficient to transform a patent-ineligible abstract idea into a patent-eligible invention."); *Intell. Ventures I LLC v. Capital One Bank (USA)*, 792 F.3d 1363, 1367–68 (Fed. Cir. 2015) (claims directed to internet-based communications recite generic computer components and do not claim inventive concepts). Moreover, the prior art cited throughout Forcepoint's Contentions, as well as the patents themselves and the prior art cited therein, demonstrate that each claim element in every Asserted Claim is directed to well-understood, routine, and conventional computer security components and techniques. The remaining Asserted Claims merely apply those conventional and generic computer components and techniques in a selected physical or technical environment—an

environment where they had already long been used by those of ordinary skill as the prior art referenced herein reflects. Thus, the Asserted Claims of the '932 Patent fail to add anything to the underlying abstract idea sufficient to transform them into patent-eligible subject matter.

Furthermore, at least under Plaintiffs' apparent infringement theory, as set forth in their Infringement Contentions, the Asserted Claims of the '932 Patent are ineligible because they would preempt the entire field of tracing where certain harmful content originated, that is, receiving information, analyzing information, and outputting a result.

This ineligibility contention is based in whole or in part on Forcepoint's present understanding of the Asserted Claims of the '932 Patent, their current construction of the claims, and/or Plaintiffs' apparent construction of the claims in their current Infringement Contentions. Forcepoint is not adopting Plaintiffs' apparent claim construction, nor admitting to the accuracy of any particular claim construction. To the extent that Plaintiffs' apparent claim construction or applications thereof are reflected in this Contention, nothing herein should be construed as an admission that Forcepoint agrees with Plaintiffs' apparent claim construction or Plaintiffs' application of that claim construction in Plaintiffs' current Infringement Contentions. Further, claim construction is not necessary to determine that the Asserted Claims of the '932 Patent are ineligible.

Forcepoint's Contentions regarding ineligibility under 35 U.S.C. § 101 may be based on Plaintiffs' allegations of infringement. Forcepoint does not necessarily agree with the interpretations set forth in Plaintiffs' Infringement Contentions and thus this ineligibility contention is not an admission that the accused products meet any particular claim element or infringe the Asserted Claim. In addition, nothing in this ineligibility contention should be interpreted as a position about whether any portion of the Asserted Claims are limiting or not.

Further, by submitting this ineligibility contention, Forcepoint does not waive and hereby expressly reserves its right to raise invalidity defenses including, but not limited, to defenses under 35 U.S.C. §§ 102, 103, and/or 112.

Discovery in this case is ongoing and, accordingly, this ineligibility contention is not to be considered final. Forcepoint reserves all rights to revise, amend, or supplement this ineligibility claim at a later date as discovery progresses, if the Court issues further claim construction rulings, or if Plaintiffs amend their Infringement Contentions.

X. INVALIDITY CONTENTIONS FOR THE '869 PATENT

A. General State of the Art at the Time of the Alleged Inventions

The prior art references identified in these Invalidity Contentions, and the "References Cited" on the face of the '869 Patent, may provide background and context pertinent to the teachings in, and interpretation of, the prior art referenced by the attached claim charts. Forcepoint may rely upon that prior art, including the "References Cited" on the face of the '869 Patent, to demonstrate the general state of the art at the time of the alleged inventions and what one of ordinary skill in the art would have understood at a time prior to the date of the alleged invention of the Asserted Claims. This prior art is exemplary only and is not in any way intended to limit the scope of what one of ordinary skill in the art would have understood at the times of the alleged inventions. Forcepoint reserves the right to rely upon additional prior art, information, and/or knowledge to demonstrate what one of ordinary skill would have understood at any time prior to the date of alleged invention of the Asserted Claims.

B. Claim Charts

Pursuant to Section II, Paragraph 4 of the Order, the claim charts attached in Appendix A as Exhibits 869-H-1 through 869-H-38 identify where each limitation of the Asserted Claims of the '869 Patent is found in the prior art.

C. Identification of the Prior Art

Based on Plaintiffs' Preliminary Infringement Contentions and authorized supplements thereto, Forcepoint identifies prior art below and in Appendix A as Exhibits 869-H-1 through 869-H-38, which contains charts disclosing the identity of each item of prior art that anticipates each claim and/or renders it obvious. As shown in Appendix A as Exhibits 869-H-1 through 869-H-38 and below, Forcepoint has identified each prior art reference by its number, country of origin, author, and date of issue (where applicable). Forcepoint notes that it has applied the prior art in accordance with Plaintiffs' improper assertions of infringement and improper applications of the claims. Forcepoint does not agree with Plaintiffs' application of the claims and denies infringement.

Forcepoint further contends that all claims that are anticipated by a particular reference are also rendered obvious by that same reference alone, in combination with the other references, and/or in combination with the knowledge of a person of ordinary skill in the art. Forcepoint reserves the right to rely upon any combination of the charted prior art under 35 U.S.C. § 103, yet Forcepoint has also identified exemplary obviousness combinations in Section V.E, *infra*.

Furthermore, with respect to the ’869 Patent, under 35 U.S.C. §§ 102(a) and (b), Forcepoint reserves the right to identify additional prior art systems developed prior to May 12, 2015. *See, e.g.*, *Intell. Ventures II LLC v. FedEx Corp.*, No. 2:16-CV-00980-JRG, 2019 WL 1434656, at *8–11 (E.D. Tex. Mar. 29, 2019). Discovery is ongoing, and Forcepoint reserves the right to amend the Invalidity Contentions herein based on third-party discovery.

D. Anticipation

At least under Plaintiffs’ apparent infringement theory, the Asserted Claims of the ’869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by the references as set forth in the attached claim charts. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the ’869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Kumar, as set forth in the attached claim charts. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the ’869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Titonis, as set forth in the attached claim charts. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the ’869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Okano, as set forth in the attached claim charts. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the ’869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Moskovitch, as set forth in the attached claim charts. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the ’869 Patent are anticipated, either expressly or inherently as understood by a person

having ordinary skill in the art, by Menaham, as set forth in the attached claim charts. At least under Plaintiffs' apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the '869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Tahan, as set forth in the attached claim charts. At least under Plaintiffs' apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the '869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Cai, as set forth in the attached claim charts. At least under Plaintiffs' apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the '869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Schultz, as set forth in the attached claim charts. At least under Plaintiffs' apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the '869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Kennedy, as set forth in the attached claim charts. At least under Plaintiffs' apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the '869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Niemela, as set forth in the attached claim charts. At least under Plaintiffs' apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the '869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Lee, as set forth in the attached claim charts. At least under Plaintiffs' apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the '869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Haq, as set forth in the attached claim charts. At least under Plaintiffs' apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–

59 of the ’869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Diao 531, as set forth in the attached claim charts. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the ’869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Diao 535, as set forth in the attached claim charts. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the ’869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Chen, as set forth in the attached claim charts. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the ’869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Diao 974, as set forth in the attached claim charts. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the ’869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Wan, as set forth in the attached claim charts. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the ’869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Cheng, as set forth in the attached claim charts. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the ’869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Xuewen, as set forth in the attached claim charts. At least under Plaintiffs’ apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the ’869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Diao 466, as set forth in the attached claim charts. At least under

Plaintiffs' apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the '869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Hu, as set forth in the attached claim charts. At least under Plaintiffs' apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the '869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Zhu, as set forth in the attached claim charts. At least under Plaintiffs' apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the '869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Ramzan, as set forth in the attached claim charts. At least under Plaintiffs' apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the '869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Diao 788, as set forth in the attached claim charts. At least under Plaintiffs' apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the '869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by McCorkendale, as set forth in the attached claim charts. At least under Plaintiffs' apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the '869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by Hsu, as set forth in the attached claim charts. At least under Plaintiffs' apparent infringement theory, Asserted Claims 18–21, 24, 26–35, 40–49, 52, and 54–59 of the '869 Patent are anticipated, either expressly or inherently as understood by a person having ordinary skill in the art, by ThreatSeeker, as set forth in the attached claim charts.

E. Obviousness

At least under Plaintiffs' apparent infringement theory, the Asserted Claims of the '869 Patent are rendered obvious by the references identified in the attached claim charts, either alone

or in the combinations with other prior art references as identified below. Forcepoint contends that one of ordinary skill in the art, at the time of the alleged invention of the Asserted '869 Patent Claims, would have been motivated to combine the references disclosed herein in such a way to reach the alleged inventions. In certain instances, the suggested obviousness combinations are provided in the alternative to Forcepoint's anticipation contentions, which shall not be construed to suggest that any reference included in the combinations is not by itself anticipatory. The combinations evidencing teachings, suggestions, and/or motivations to combine the prior-art references in a way that renders the Asserted Claims obvious are merely exemplary.

Forcepoint reserves the right to amend these Contentions and prior art combinations in light of new information that may arise from third parties related to additional computer security systems. The following list of references are also evidence of the knowledge of POSITA at the time of the alleged invention of the '869 Patent: Kumar, Okano, Titonis, Moskovitch, Menahem, Tahan, Cai, Schultz, Kennedy, Niemela, Lee, Haq, Diao 535, Diao 531, Chen, Diao 974, Wan, Cheng, Xuewen, Diao 466, Hu, Zhu, Ramzan, Diao 788, McCorkendale, Hsu, Ideses, Okano 074, Stokes, Friedrichs, Maloof, Avasarala, Ronen, Karta, Ravula, Masud, ThreatSeeker, and Next Generation Firewall.

One of ordinary skill in the art would be motivated to combine these references in the above combinations for at least the following reasons. One of ordinary skill in the art would have understood that each of these references are in the same field of endeavor, namely methods and devices relating to computer security. *See, e.g.*, Titonis at Abstract; Okano at Abstract; Kumar at Abstract; Moskovitch at [0057]; Menahem at [1483]; Tahan at 962; Cai at [0027]; Schultz at [0104]; Kennedy at [0015]; Niemela at [0009]; Lee at [0007]; Haq at [0022]; Diao 535 at 3:6-23; Diao 531 at 3:6-23, Chen at 2:16-53; Diao 974 at 2:21-33; Wan at 11:44-60; Cheng at 2:19-58; Xuewen at 9:42-10:43; Diao 466 at 3:32-49; Hu at 1:46-58; Zhu at 3:44-4:7; Ramzan at 4:19-40; Diao 788 at 10:9-27; McCorkendale at 10:50-11:3; Hsu at 2:22-39; Ideses at [0063]; Okano 074 at Abstact; Stokes at Abstract.; Friedrichs at Abstract; Maloof at Abstract.; Avasarala at Abstract; Ronen at Abstract; Karta at 3:7-42; Ravula at 27-28; Masud at 50; ThreatSeeker (Exhibit 869-H-37) at 4–5 (citing Websense Express (June 28, 2007) at 2; The Websense ThreatSeeker Network: Leveraging Websense HoneyGrid Computing (Sep. 4, 2008) at 2); Next Generation Firewall (Exhibit 869-H-38) at 3–4 (citing StoneGate 5.1: Firewall/VPN Reference Guide (Jan. 13, 2010)

at 26, 112; StoneGate Firewall/VPN Common Criteria Security Target Report (Jan. 23, 2009) at 17).

One of ordinary skill in the art would have recognized that these references are directed to addressing the same problem, in particular, improving computer security. *See, e.g.*, Titonis at Abstract; Okano at Abstract; Kumar at Abstract; Moskovitch at [0057]; Menahem at [1483]; Tahan at 962; Cai at [0027]; Schultz at [0104]; Kennedy at [0015]; Niemela at [0009]; Lee at [0007]; Haq at [0022]; Diao 535 at 3:6-23; Diao 531 at 3:6-23; Chen at 2:16-53; Diao 974 at 2:21-33; Wan at 11:44-60; Cheng at 2:19-58; Xuewen at 9:42-10:43; Diao 466 at 3:32-49; Hu at 1:46-58; Zhu at 3:44-4:7; Ramzan at 4:19-40; Diao 788 at 10:9-27; McCorkendale at 10:50-11:3; Hsu at 2:22-39; Ideses at [0063]; Okano 074 at Abstact; Stokes at Abstract.; Friedrichs at Abstract; Maloof at Abstract.; Avasarala at Abstract; Ronen at Abstract; Karta at 3:7-42; Ravula at 27-28; Masud at 50; ThreatSeeker (Exhibit 869-H-37) at 4–5 (citing Websense Express (June 28, 2007) at 2; The Websense ThreatSeeker Network: Leveraging Websense HoneyGrid Computing (Sep. 4, 2008) at 2); Next Generation Firewall (Exhibit 869-H-38) at 3–4 (citing StoneGate 5.1: Firewall/VPN Reference Guide (Jan. 13, 2010) at 26, 112; StoneGate Firewall/VPN Common Criteria Security Target Report (Jan. 23, 2009) at 17).

Further, the Asserted Claims of the ’869 Patent contain merely a duplication of concepts known in the prior art and have no patentable significance given that no unexpected results occur—*i.e.* the patentee merely combines known prior art elements according to known methods to yield predictable results. For example, the prior art references describe methods of using “identifying static data points…indicative of either a harmful or benign executable file.” *See e.g.*, Kumar at 4:34-49; Okano at 7:46-58; Titonis at 12:1-23; Moskovitch at [0029]-[0030]; Menahem at [1483] ; Tahan at 955; Cai at [0027]; Schultz at [0042]; Kennedy at [0017]; Niemela at [0011]; Lee at

[0009]; Haq at [0044]; Diao 535 at 3:48-56; Diao 531 at 1:63-67; Chen at 3:31-43; Diao 974 at 3:20-33; Wan at 8:51-9:1; Cheng at 5:7-31; Xuewen at 7:57-63; Diao 466 at 2:10-14; Hu at 3:63-4:2; Zhu at 4:28-39; Ramzan at 2:65-3:3; Diao 788 at 5:26-35; McCorkendale at 2:30-37; Hsu at 6:50-7:6; Ideses at [0089]; Okano 074 at [0074]-[0080]; Stokes at 3:61-4:5; Friedrichs at Abstract; Maloof at [0027]; Avasarala at [0037]; Ronen at 1:44-58; Karta at 3:43-4:9; Ravula at 47-48; Masud at 206; ThreatSeeker (Exhibit 869-H-37) at 6–7 (citing Websense Express (June 28, 2007) at 2; The Websense ThreatSeeker Network: Leveraging Websense HoneyGrid Computing (Sep. 4, 2008) at 2, 7, 9; The Web Isn't Fun Anymore: How Websense Technology Protects Against Internet-Based Threats (Aug. 1, 2007) at 4; Websense Product Overview (Jan. 10, 2007) at 4); Next Generation Firewall (Exhibit 869-H-38) at 4–5 (citing StoneGate 5.1: Firewall/VPN Reference Guide (Jan. 13, 2010) at 112; StoneGate Firewall/VPN Common Criteria Security Target Report (Jan. 23, 2009) at 17; StoneGate Firewall/VPN Common Criteria Security Target Report (Jan. 23, 2009) at 21).

The prior art references further describe a "associating the identified static data point with one of a plurality of categories of files" *See e.g.*, Titonis 45:31-36; Okano at 8:19-29; Kumar at 6:4-14; Moskovitch at [0029]-[0030]; Menahem at [1487] ; Tahan at 949; Cai at [0012]; Schultz at [0042]; Kennedy at [0023]; Niemela at [0067]; Lee at [0010]; Haq at [0044]; Diao 535 at 1:63-67; Diao 531 at 1:63-67; Chen at 3:31-43; Diao 974 at 3:20-33; Wan at 8:51-9:1; Cheng at 5:7-31; Xuewen at 7:57-63; Diao 466 at 4:44-62; Hu at 3:63-4:2; Zhu at 4:28-39; Ramzan at 2:65-3:3; Diao 788 at 5:26-35; McCorkendale at 2:30-37; Hsu at 6:50-7:6; Ideses at [0096]; Okano 074 at [0074]-[0080]; Stokes at 5:59-67; Friedrichs at 6:18-29; Maloof at [0027]; Avasarala at [0037]; Ronen at 6:46-60; Karta at 1:57-62; Ravula at 47-48; Masud at 206; ThreatSeeker (Exhibit 869-H-37) at 8–10 (citing Websense Express (June 28, 2007) at 2; The Websense ThreatSeeker

Network: Leveraging Websense HoneyGrid Computing (Sep. 4, 2008) at 8, 12; Websense Enterprise V6.2 and Web Security Suites "Aries" Requirements Document (May 01, 2005) at 6); Next Generation Firewall (Exhibit 869-H-38) at 6–7 (citing StoneGate 5.1: Firewall/VPN Reference Guide (Jan. 13, 2010) at 29, 114; The Evolution to the Next Generation Firewall: Meeting Today's Critical Enterprise Network Demands (Feb. 22, 2010) at 10).

The prior art references further describe a "identifying an executable file to be evaluated." *See e.g.*, Titonis at 4:58-67; Okano at 9:13-29; Kumar at 4:34-49; Moskovitch at [0033]; Menahem at [1487]; Tahan at 955; Cai at [0016]; Schultz at [0019]; Kennedy at [0004]; Niemela at [0062]; Lee at [0032]; Haq at [0064]; Diao 535 at 4:1-11; Diao 531 at 51:1-11; Chen at 4:49-61; Diao 974 at 3:20-24; Wan at 8:27-32; Cheng at 3:14-39; Xuewen at 4:65-5:1; Diao 466 at 4:26-36; Hu at 3:38-62; Zhu at 4:49-51; Ramzan at 5:1-12; Diao 788 at 4:13-15; McCorkendale at 1:29-42; Hsu at 3:43-51; Ideses at [0096]; Okano 074 at [0074]-[0080]; Stokes at 2:32-55; Friedrichs at 13:27-14:27; Maloof at [0027]; Avasarala at [0044]; Ronen at 1:59-2:8; Karta at 3:43-4:9; Ravula at 77; Masud at 211; ThreatSeeker (Exhibit 869-H-37) at 10–11 (citing Websense Express (June 28, 2007) at 2; The Websense ThreatSeeker Network: Leveraging Websense HoneyGrid Computing (Sep. 4, 2008) at 2; Websense Enterprise V6.2 and Web Security Suites "Aries" Requirements Document (May 01, 2005) at 10); Next Generation Firewall (Exhibit 869-H-38) at 8–9 (citing StoneGate 5.1: Firewall/VPN Reference Guide (Jan. 13, 2010) at 20, 112; The Evolution to the Next Generation Firewall: Meeting Today's Critical Enterprise Network Demands (Feb. 22, 2010) at 10).

The prior art references further describe a "extracting a plurality of static data points from the executable file." *See e.g.*, Titonis at 21:48-22:2; Okano at 9:13-41; Kumar at 5:43-52; Moskovitch at [0021]; Menahem at [1488]; Tahan at 949; Cai at [0012]; Schultz at [0021];

Kennedy at [0028]; Niemela at [0068]; Lee at [0032]; Haq at [0018]; Diao 535 at 4:1-11; Diao 531 at 4:1-11; Chen at 3:31-43; Diao 974 at 3:21-26; Wan at 4:34-40; Cheng at 3:45-67; Xuewen at 5:49-55; Diao 466 at 4:26-30; Hu at 7:13-29; Zhu at 1:36-41; Ramzan at 2:56-65; Diao 788 at 7:33-38; McCorkendale at 1:29-42; Hsu at 3:30-42; Ideses at [0089]; Okano 074 at [0074]-[0080]; Stokes at 4:37-50; Friedrichs at 3:4-16; Maloof at [0027]; Avasarala at [0037]; Ronen at 1:44-58; Karta at 3:43-4:9; Ravula at 40; Masud at 211; ThreatSeeker (Exhibit 869-H-37) at 11–13 (citing The Websense ThreatSeeker Network: Leveraging Websense HoneyGrid Computing (Sep. 4, 2008) at 8; Websense Email Security Suite: DataSheet (Sept. 16, 2008) at 2); Next Generation Firewall (Exhibit 869-H-38) at 9–10 (citing StoneGate Firewall/VPN Common Criteria Security Target Report (Jan. 23, 2009) at 10; The Evolution to the Next Generation Firewall: Meeting Today's Critical Enterprise Network Demands (Feb. 22, 2010) at 10).

The prior art references further describe a "generating a feature vector from the plurality of static data points." See e.g., Titonis at 29:30-45; Okano at 9:13-41; Kumar at 4:50-5:3; Moskovitch at [0034]; Menahem at [1487]; Tahan at 951; Cai at [0025]; Schultz at [0115]; Kennedy at [0027]; Niemela at [0067]; Lee at [0008]; Haq at [0085]; Diao 535 3:24-34; Diao 531 at 3:24-34; Chen at 3:6-14; Diao 974 at 3:52-4:1; Wan at 5:27-45; Cheng at 4:1-6; Xuewen at 5:15-19; Diao 466 at 4:26-30; Hu at 7:30-40; Zhu at 1:36-41; Ramzan at 2:65-3:3; Diao 788 at 5:26-35; McCorkendale at 7:15-32; Hsu at 4:33-41; Ideses at [0044]; Okano 074 at [0090]-[0091]; Stokes at 4:37-50; Friedrichs at 6:57-64; Maloof at [0040]; Avasarala at [0050]; Ronen at 1:59-2:8; Karta at 9:13-10:52; Ravula at 40; Masud at 91; ThreatSeeker (Exhibit 869-H-37) at 10–13 (citing Websense Product Overview (Jan. 10, 2007) at 3; The Websense ThreatSeeker Network: Leveraging Websense HoneyGrid Computing (Sep. 4, 2008) at 13–16; The Web Isn't Fun Anymore: How Websense Technology Protects Against Internet-Based Threats (Aug. 1, 2007) at

3); Next Generation Firewall (Exhibit 869-H-38) at 11–13 (citing StoneGate Firewall/VPN Common Criteria Security Target Report (Jan. 23, 2009) at 17, 21, 27; StoneGate 5.1: Firewall/VPN Reference Guide (Jan. 13, 2010) at 112).

The prior art references further describe a "evaluating the feature vector using a machine learning model" *See e.g.*, Titonis at 25:56-26:35; Okano at 8:62-9:11; Kumar at 8:21-28; Moskovitch at [0046]; Menahem at [1484]; Tahan at 951; Cai at [0025]; Schultz at [0042]; Kennedy at [0027]; Niemela at [0067]; Lee at [0030]; Haq at [0085]; Diao 535 at 3:56-67; Diao 531 at 3:56-67; Chen at 3:20-27; Diao 974 at 4:8-14; Wan at 7:32-48; Cheng at 6:43-52; Xuewen at 5:22-28; Diao 466 at 4:26-34; Hu at 3:63-4:2; Zhu at 4:14-23; Ramzan at 3:14-17; Diao 788 at 6:14-19; McCorkendale at 1:29-42; Hsu at 7:7-18; Ideses at [0096]; Okano 074 at [0107]-[0109]; Stokes at 1:17-33; Friedrichs at 6:18-29; Maloof at [0011]; Avasarala at [0036]; Ronen at 1:59-2:8; Karta at 10:1-14; Ravula at 38; Masud at 77; ThreatSeeker (Exhibit 869-H-37) at 17–18 (citing The Websense ThreatSeeker Network: Leveraging Websense HoneyGrid Computing (Sep. 4, 2008) at 9); Next Generation Firewall (Exhibit 869-H-38) at 14–15 (citing StoneGate Firewall/VPN Common Criteria Security Target Report (Jan. 23, 2009) at 17; StoneGate 5.1: Firewall/VPN Reference Guide (Jan. 13, 2010) at 112, 114).

Other examples of these concepts are cited in the attached charts for the above references. *See* Exs. 869-H-1 through 869-H-38. It would have been known and simple to take a prior art for malware detection by comparison with similar objects, and it would have been obvious to a POSITA to try this. *Id.* It would have also yielded predictable results in the context of improving computer security. *Id.*

Forcepoint is not aware of any secondary considerations supporting non-obviousness of the '869 Patent claims. To the extent Plaintiffs seek to introduce any alleged secondary considerations in the future, Forcepoint reserves the right to respond at that time.

F. Invalidity Under Section 112

Pursuant to Section II, Paragraph 4 of the Order, Forcepoint provides an identification of the limitations of the '869 Patent that are invalid based on indefiniteness under 35 U.S.C. § 112(b), or enablement or written description under 35 U.S.C. § 112(a). These Contentions are being proffered without the full benefit of expert disclosure or discovery.

Asserted Claims 18, 32, and 46 of the '869 Patent (and all claims which depend from these claims) are indefinite, and thus invalid. "[A] patent is invalid for indefiniteness if its claims, read in light of the specification delineating the patent, and the prosecution history, fail to inform, with reasonable certainty, those skilled in the art about the scope of the invention." *Nautilus, Inc. v. Biosig Instruments, Inc.*, 572 U.S. 898, 901 (2014). For example, as applied in Plaintiffs' Infringement Contentions, the terms "selectively turned on or off", "predetermined range", "harmful [executable] file[s]", "benign [executable] file[s]", "classifier", "one or more categories of files", "without decrypting or unpacking the executable file", "artificial neural network", "user request for a file download" "evaluating the feature vector using a machine learning model", "machine learning model", "detected condition", and "harmful" are indefinite because each of these phrases not only is subjective but also does not have a meaning that can be clearly determined from the patent, and thus fails to put the public on notice of what is and is not covered by these claims.

Asserted Claims 18, 32, and 46 of the '869 Patent (and all claims which depend from these claims) of the '869 Patent are invalid under § 112 ¶ 1, because the specification as filed does not contain a sufficient written description supporting those claims. In particular, the patent disclosure

would not lead a person of ordinary skill in the art to understand that the named inventor had possession of the purported inventions as claimed and in view of Plaintiffs' contentions. For example, Asserted Claims 18, 32, and 46 (and all claims that depend from these claims) fail to satisfy the requirements of 35 U.S.C. § 112 for at least the following reasons: the '869 Patent fails to provide an adequate written description of the phrases "selectively turned on or off", "predetermined range", "harmful [executable] file[s]", "benign [executable] file[s]", "classifier", "generating a feature vector from a plurality of static data points", "classifier trained to classify the static data points", "files known to fit into one of the plurality of categories of files", "one or more categories of files", "plurality of static data points are extracted without decrypting or unpacking the executable file", "determination of whether the executable file is harmful", "classifying the executable file as harmful", "artificial neural network", "user request for a file download", "evaluating the feature vector using a machine learning model", "machine learning model", "detected condition", and "harmful".

A more detailed basis for the above indefiniteness, written description, and enablement defenses may be set forth in any expert report(s) on invalidity to be served on Plaintiffs in accordance with the Court's Scheduling Order.

G. Invalidity Under Section 101

Pursuant to Section II, Paragraph 4 of the Order, Forcepoint provides an identification of the claims of the '869 Patent they contend are directed to ineligible subject matter under AIA 35 U.S.C. § 101. These Contentions are being proffered without expert disclosure or discovery.

Each Asserted Claim of the '869 Patent is directed to ineligible subject matter under 35 U.S.C. § 101. First, the Asserted Patent Claims of the '869 Patent are directed to the abstract idea of, for example, identifying, extracting and classifying data based on known data points. Such a process does not go beyond routine mental processes of data classification based on pre-existing

criteria. *See, e.g.*, '869 Patent at claims 18, 46. For example, the specification of the '869 confirms that the Asserted Claims are directed to basic concepts of identifying, extracting, and classifying data. *See, e.g.*, *id.* at 4:29–34 ("To classify executable files into one of the above identified categories, the knowledge component 102 collects static data on a large variety of executable files (e.g., PE files)."); *id.* at 5:8–11 ("In examples, the collected data on the executable files is analyzed to identify static data points that may indicate one of a malicious file, a benign file or a potentially unwanted file."); *id.* at 5:11–47 ("For instance, the knowledge component 102 may employ one or more programming operations to identify static data points for collection, and to associate the static data points with one of the categories of files (e.g., malicious, benign or potentially unwanted). Programming operations utilized by the knowledge component 102 include operations to collect file data (e.g., executable files or data points from executable files), parse the file data, and store extracted data points.").

Second, the Asserted Claims of the '869 Patent do not contain any inventive concept as they combine standard, generic, and well-known components in a conventional way to arrive at the claimed invention. The '869 Patent describes identifying, extracting and classifying data based on known data points using well-known devices "such as a computer, a client device . . . and/or any other electronic devices[.]" *Id.* at 3:17–21.

Considered individually or as an ordered combination, the claim limitations recite nothing more than the abstract idea of identifying, extracting and classifying data based on known data points. Simply identifying an overarching desirable outcome ("threat detection of executable files") without specifying any technical improvements over the prior art to achieve that outcome does not rise to the level of an inventive and, thus, patent-eligible concept. *See Intell. Ventures I LLC v. Erie Indem. Co.*, 850 F.3d 1315, 1330–32 (Fed. Cir. 2017) ("The recited use of a mobile

interface and pointers to retrieve user information evidences nothing more than a 'generic computer implementation' of the abstract idea that is insufficient to transform a patent-ineligible abstract idea into a patent-eligible invention."); *Intell. Ventures I LLC v. Capital One Bank (USA)*, 792 F.3d 1363, 1367–68 (Fed. Cir. 2015) (claims directed to internet-based communications recite generic computer components and do not claim inventive concepts). Moreover, the prior art cited throughout Forcepoint's Contentions, as well as the patents themselves and the prior art cited therein, demonstrate that each claim element in every Asserted Claim is directed to well-understood, routine, and conventional computer security components and techniques. The remaining Asserted Claims merely apply those conventional and generic computer components and techniques in a selected physical or technical environment—an environment where they had already long been used by those of ordinary skill as the prior art referenced herein reflects. Thus, the Asserted Claims of the '869 Patent fail to add anything to the underlying abstract idea sufficient to transform them into patent-eligible subject matter.

Furthermore, at least under Plaintiffs' apparent infringement theory, as set forth in their Infringement Contentions, the Asserted Claims of the '869 Patent are ineligible because they would preempt the entire field of threat detection.

This ineligibility contention is based in whole or in part on Forcepoint's present understanding of the Asserted Claims of the '869 Patent, their current construction of the claims, and/or Plaintiffs' apparent construction of the claims in their current Infringement Contentions. Forcepoint is not adopting Plaintiffs' apparent claim construction, nor admitting to the accuracy of any particular claim construction. To the extent that Plaintiffs' apparent claim construction or applications thereof are reflected in this Contention, nothing herein should be construed as an admission that Forcepoint agrees with Plaintiffs' apparent claim construction or Plaintiffs'

application of that claim construction in Plaintiffs' current Infringement Contentions. Further, claim construction is not necessary to determine that the Asserted Claims of the '869 Patent are ineligible.

Forcepoint's Contentions regarding ineligibility under 35 U.S.C. § 101 may be based on Plaintiffs' allegations of infringement. Forcepoint does not necessarily agree with the interpretations set forth in Plaintiffs' Infringement Contentions and thus this ineligibility contention is not an admission that the accused products meet any particular claim element or infringe the Asserted Claim. In addition, nothing in this ineligibility contention should be interpreted as a position about whether any portion of the Asserted Claims are limiting or not. Further, by submitting this ineligibility contention, Forcepoint does not waive and hereby expressly reserves its right to raise invalidity defenses including, but not limited, to defenses under 35 U.S.C. §§ 102, 103, and/or 112.

Discovery in this case is ongoing and, accordingly, this ineligibility contention is not to be considered final. Forcepoint reserves all rights to revise, amend, or supplement this ineligibility claim at a later date as discovery progresses, if the Court issues further claim construction rulings, or if Plaintiffs amend their Infringement Contentions.

XI. DOCUMENT PRODUCTION

Pursuant to Section II, Paragraph 4 of the Order, Forcepoint states that (1) all prior art related to these Contentions and (2) technical documents, excluding source code, within Forcepoint's possession, sufficient to show the operation of the accused product(s) were either already produced (e.g., at FP_WR00006352 - FP_WR00017692 and FP_WR00030916 - FP_WR00034239) or are being produced concurrently with service of these Contentions at FP_WR00586274 - FP_WR00599749. Forcepoint's will make source code available for inspection in the Austin office of Kirkland & Ellis.
