

Waves of the Year 2000+

**The 8th IEEE International Symposium on Personal,
Indoor and Mobile Radio Communications**
September 1-4, 1997, Marina Congress Center, Helsinki, Finland

Technical Program, Proceedings, Volume 1 /3

Volume	Day	Session	Pages
1	Monday	C1 - D5	1 - 250
2	Tuesday	E1 - H5	251 - 744
3	Wednesday	I1 - L5	745 - 1232

Technical co-sponsorship by:
IEEE Communication Society

Sponsored by:
IEEE Communication Chapter in Finland
IEEE Finland Section

In Cooperation with:
IEE
IEICE

1997 International Symposium on Personal, Indoor and Mobile Radio Communications Proceedings

Table of Contents

C1 Statistical Channel Modeling

Organiser: T. Kaiser

C1.1	Ambiguity Function and Related Studies for Ultra-Wide Band Radar	1
	<i>Darwish Abd-El A.M., Air Defence College, Egypt</i>	
C1.2	Received Envelope Error Statistics for Different Models of the Rayleigh Fading Mobile Channel	2
	<i>Larsson A. and Salomonsson G., Lund University, Sweden</i>	
C1.3	Generative Markov Models for Discrete Channel Modelling	7
	<i>Nefedov N., Nokia Research Center, Finland</i>	
C1.4	On Verifying a First-Order Markovian Model for the Multi-Threshold Success/Failure Process for Rayleigh Channel	12
	<i>Babich F. and Lombardi G., Università di Trieste, Italy</i>	
C1.5	Outage and Error Events in Bursty Channels	17
	<i>Zorzi M., University of California San Diego, USA</i>	

C2 Third Generation Systems I

C2.1	A Performance Analysis of TDMA and CDMA Based Air Interface Solutions for UMTS High Bit Rate Services	22
	<i>Pekkonen K., Nokia Mobile Phones R&D, Holma H., Nokia Research Center, Keskitalo I., Nokia Telecommunications/New Radio Systems, Nikula E., Nokia Research Center and Westman T., Nokia Mobile Phones R&D, Finland</i>	
C2.2	Capacity of Co-Existent Cellular CDMA and GSM with Shadowing and Imperfect Sectorization, Power Control and Notch Filtering	27
	<i>Moelker D.-J. and Prasad R., Delft University of Technology, The Netherlands</i>	
C2.3	Interference Cancellation for Third Generation Mobile Radio Systems	32
	<i>Anton-Haro C., Fonollosa J.A.R. and Fonollosa J.R., Universitat Politècnica de Catalunya, Spain</i>	
C2.4	FRAMES Multiple Access Mode 1 - Wideband TDMA with and without Spreading	37
	<i>Klein A., Siemens AG Mobile Networks, Germany, Pirhonen R., Nokia Research Center, Finland, Sköld J., Ericsson Radio Systems AB, Sweden and Suoranta R., Nokia Research Center, Finland</i>	
C2.5	FRAMES Multiple Access Mode 2 - Wideband CDMA	42
	<i>Ovesjö F., Dahlman E., Ericsson Radio Systems AB, Sweden, Ojanperä T., Toskala A., Nokia Research Center, Finland and Klein A., Siemens AG Mobile Networks, Germany</i>	

C3 Multiuser Detection

Organisers: M. Juntti and M. Latva-aho

C3.1	Joint Demodulation in DS/CDMA Systems Exploiting the Space and Time Diversity of the Mobile Radio Channel	47
	<i>Dahlhaus D., Jarosch A., Fleury B.H. and Heddergott R., Swiss Federal Institute of Technology (ETH), Switzerland</i>	
C3.2	Spreading Sequences for Zero-Forcing DS-CDMA Multiuser Detectors	53
	<i>Elders-Boll H., Busboom A. and Schotten H.D., Aachen University of Technology, Germany</i>	
C3.3	Minimum Error Probability and Suboptimum Noncoherent Multiuser Detection for Nonlinear Nonorthogonal Synchronous Signaling over a Rayleigh Fading Channel	58
	<i>Russ A. and Varanasi M.K., University of Colorado at Boulder, USA</i>	

C3.4	Computationally Efficient Multiuser Detectors	62
	<i>Das S., Cavallaro J.R. and Aazhang B., Rice University, USA</i>	
C3.5	The Bootstrap Algorithm: A Robust Multiuser CDMA Detector with Time Delay Variations	68
	<i>Li X. and Bar-Ness Y., New Jersey Institute of Technology, USA</i>	
C4	Smart Antennae	
	Organiser: R. Kobno	
C4.1	On RAKE Allocation for CDMA Receiver Employing Antenna Arrays.....	73
	<i>Ylitälo J. and Järvelä M., Nokia Telecommunications, Finland</i>	
C4.2	Experimental Evaluation of an Adaptive Antenna for a TDMA Mobile Telephony System	79
	<i>Strandell J., Wennström M., Rydberg A., Öberg T., Uppsala University, Gladh O., Rexberg L., Sandberg E., Ericsson Radio Access AB, Andersson B.V., Communicator CEC and Appelgren M., Communicator C3C, Sweden</i>	
C4.3	Dominant Interference Rejection by Adaptive Antennas in GSM	85
	<i>Ranta P.A. and Escartin M., Nokia Research Center, Finland</i>	
C4.4	Capacity Enhancement of Narrowband CDMA by Intelligent Antennas	90
	<i>Martin U. and Gaspard I., Deutsche Telecom AG, Germany</i>	
C4.5	Characterization System for Radio Channel of Adaptive Array Antennas	95
	<i>Kalliola K. and Vainikainen P., Helsinki University of Technology, Finland</i>	
C5	Multicarrier CDMA	
	Organiser: R. Prasad	
C5.1	A Flexible Spread-Spectrum Multi-Carrier Multiple-Access System for Multi-Media Applications	100
	<i>Kaiser S. and Fazel K., German Aerospace Research Establishment, Germany</i>	
C5.2	Uplink Coverage Analysis of Multicarrier Joint Detection Code Division Multiple Access Based Macrocellular Radio System	105
	<i>Berens F., Plechinger J. and Jung P., University of Kaiserslautern, Germany</i>	
C5.3	Capacity of MC-FDMA in Mobile Communications	110
	<i>Nogueroles R., Bossert M., University of Ulm, Germany and Zyablov V., Institute for Problems of Information Transmission, Russia</i>	
C5.4	Performance of Multi-Carrier CDMA Systems with Channel Estimation in Two Dimensions	115
	<i>Kaiser S. and Hoeber P., German Aerospace Research Establishment, Germany</i>	
C5.5	Crest Factor Reduction Using Orthogonal Spreading Codes in Multi-Carrier CDMA Systems	120
	<i>Freiberg L., Annamalai A. and Bhargava V.K., University of Victoria, Canada</i>	
C5.6	A Forward Link Intracell Orthogonalization Technique Using Multicarrier Pre-Decorrelation for CDMA Wireless Local Communication System	125
	<i>Matsutani H., Keio University, Sanada Y., Tokyo Institute of Technology and Nakagawa M., Keio University, Japan</i>	

D1 Propagation I

Organiser: A. Sheikh

D1.1	3D Ray Launching and Moment Method for Indoor Radio Propagation Purposes	130
	<i>Sandor Z., Nagy L., Szabo Z. and Csaba T., Technical University of Budapest, Hungary</i>	
D1.2	Ray Optical Approach for a Wideband Indoor Wave Propagation Model with Moving Receiver	135
	<i>Layer F., Kattenbach R. and Fr��chting H., University of Kassel, Germany</i>	
D1.3	Stochastic Radio Channel Model for Advanced Indoor Mobile Communication System	140
	<i>Heddergott R., Bernhard U. and Fleury B.H., Swiss Federal Institute of Technology, Switzerland</i>	
D1.4	A BER Floor Simulation for the Indoor Multipath Environment	145
	<i>Takada J., Mochida H., Int. Cooperation Center for Science and Technology and Araki K., Tokio Institute of Technology, Japan</i>	
D1.5	Measurements of Millimeter Wave Indoor Propagation and High-Speed Digital Transmission Characteristics at 60 GHz	149
	<i>Kato A., Manabe T., Communications Research Laboratory, Miura Y., The University of Electro-Communications, Sato K. and Ihara T., Communications Research Laboratory, Japan</i>	

D2 Systems Evolution

Organiser: J. Savusalo

D2.1	Algorithm Test Using Measurements from an Adaptive Antenna Array Testbed for GSM/UMTS	155
	<i>Leth-Espensen P., Zetterberg P., Mogensen P.E., Frederiksen F., Olesen K. and Larsen S.L., Aalborg University, Denmark</i>	
D2.2	A CDMA Data Overlay of the GSM Network	160
	<i>Widdowson T., BT Laboratories, United Kingdom</i>	
D2.3	DECT Capacity in an Urban Environment	164
	<i>Casademont J., Paradells J., Universitat Polit��cnica de Catalunya, Carrillo M.I.L., Alcatel Standard Eletrica, Spain</i>	
D2.4	CDMA and DECT: Alternative Wireless Local Loop Technologies for Developing Countries	169
	<i>L��tter M., Alcatel Altech Telecom and van Rooyen P., University of Pretoria, South Africa</i>	
D2.5	Reverse Link Capacity for Mixed Voice Users (8 kbps and 13 kbps Vocoders) in IS-95A Networks	174
	<i>Aksu A., GTE Laboratories Inc., USA</i>	

D3 Wireless ATM

Organiser: G. Omidyar

D3.1	Wireless Access to ATM-Networks Based on Direct-Beam Infrared Links	179
	<i>Wolf M. and Iversen K., Heinrich-Hertz-Institut, Germany</i>	
D3.2	Indoor Channel Characterisation Measurements with Directional Antennas for Future High Frequency ATM Wireless Access Systems	184
	<i>Sun Y., Hafezi P., Nix A. and Beach M., University of Bristol, United Kingdom</i>	
D3.3	A Distributed Self-Clocked Fair Queueing Architecture for Wireless ATM Networks	189
	<i>Kautz R., The MITRE Corporation, USA and Leon-Garcia A., King's College, Canada</i>	

D3.4	Modeling of Low Data Rate Services for Mobile ATM	194
	<i>Uziel A. and Tummala M., ECE Dept. Naval Postgraduate School, USA</i>	
D3.5	A Wireless ATM Oriented MAC Protocol for High-Speed Wireless LAN	199
	<i>Wu G., Hase Y., Taira K. and Iwasaki K., Ministry of Posts and Telecommunications, Japan</i>	
D4	Trellis-Coded Modulation	
	Organiser: B. Vucetic	
D4.1	The Performance of Trellis Coded Q-ary PSK in Rayleigh Fading and Nakagami Fading with Dual Diversity Reception	204
	<i>Tellambura C., Monash University, Australia</i>	
D4.2	Performance of TC-MPSK on Co-Channel Interference and Fading Channel	207
	<i>Wibisono G. and Sasase I., Keio University, Japan</i>	
D4.3	Trellis Coding Combined with Self-Synchronous Multi-h CPM	212
	<i>Ertas T., Dokuz Eylul University, Turkey and Ali F.H., The University of Sussex, United Kingdom</i>	
D4.4	I-QTCM QPSK Synchronous DS/CDMA over Frequency-Selective Multipath Rayleigh Fading Channels with Selection Diversity	216
	<i>Furió I. and Femenias G., Universitat de les Illes Balears, Spain</i>	
D4.5	Performance of Multicarrier Trellis-Coded Slow-FH/16QAM with an Interference Immunity Decoding	221
	<i>Shinoi K., Keio University, Saba T., Nagoya Institute of Technology and Sasase I., Keio University, Japan</i>	
D5	Code Division Multiple Access I	
	Organiser: J. Wang	
D5.1	Effects of Weighted Despreading Sequence on CDMA Performance	226
	<i>Huang Y. and Ng T.S., The University of Hong Kong, Hong Kong</i>	
D5.2	Compressed Mode Techniques for Inter-Frequency Measurements in a Wide-Band DS-CDMA System	231
	<i>Gustafsson M., Ericsson Radio Systems AB, Sweden, Jamal K., Nippon Ericsson K.K., Japan and Dahlman E., Ericsson Radio Systems AB, Sweden</i>	
D5.3	Outage Probability of a Cellular Hybrid DS/SFH CDMA System	236
	<i>Grujev S., KPN Research, Royal PTT Netherlands and Prasad R., Delft University of Technology, The Netherlands</i>	
D5.4	Analysis of CDMA Downlink Capacity Enhancements	241
	<i>Hämäläinen S., Holma H., Toskala A., Nokia Research Center and Laukkanen M., Nokia Mobile Phones, Finland</i>	
D5.5	Forward and Reverse Link Capacity Enhancement of DS/CDMA Cellular System Using Channel Activation and Soft Power Control Techniques	246
	<i>Hashimoto M., Sampei S. and Morinaga N., Osaka University, Japan</i>	
E1	System Performance Analysis	
	Organiser: L. Hanzo	
E1.1	Error Rate Analysis of Broadband Binary FM in an Indoor Channel	251
	<i>Wedge D., Hewlett-Packard Laboratories, United Kingdom</i>	

E1.2	BER Analysis of a Novel Hybrid Modulation Scheme for Noncoherent DS-CDMA Systems	256
	<i>Nikolai D. and Kammeyer K.-D., University of Bremen, Germany</i>	
E1.3	A Performance Comparison of Three Indoor Radio Network Concepts Based on Time Dynamic Simulations	261
	<i>Åslundh A., Frodigh M. and Wallstedt K., Ericsson Radio Systems AB, Sweden</i>	
E1.4	Performance Analysis of Cellular Digital Mobile Radio Systems Including Diversity Techniques	266
	<i>Holleman W., KPN Research, Prasad R. and Kegel A., Delft University of Technology, The Netherlands</i>	
E1.5	Error Performance Analysis of FFH-MFSK with Multitone Jamming	271
	<i>Wang J.-W. and Wen J.-H., National Chung Cheng University, Taiwan</i>	
E2	Multiple Access Communications	
	Organiser: K.-C. Chen	
E2.1	Shannon-Theoretic Considerations for a Gaussian Cellular TDMA Multiple-Access Channel with Fading	276
	<i>Somekh O. and Shamai S., Technion-Israel Institute of Technology, Israel</i>	
E2.2	Introduction to SFDMA Multiple Access Networks and Their Possible Implementation in Terrestrial DVB Return Channels	281
	<i>Callonnec D., Pace D. and Castelain D., France Telecom, Development Branch, France</i>	
E2.3	A Simulation Bed to Investigate the Feasibility of a TDD DS CDMA Residential Indoor System Underlay	286
	<i>Lin M., Sunay O., Honkasalo Z.-C. and Honkasalo H., Nokia Research Center, USA</i>	
E2.4	On Co-Channel Interference Measurements	292
	<i>Chen J.-Y. and Su Y.T., National Chiao Tung University, Taiwan</i>	
E2.5	Capacity Calculation in DS-CDMA Systems Supporting Multi-Class Services	297
	<i>Lee S.J., Lee H.W. and Sung D.K., KAIST, Korea</i>	
E3	Equalization	
	Organiser: T. Kaiser	
E3.1	A Noniterative Approach for Computing Linear Equaliser Tap Weights	302
	<i>Tellambura C., Monash University, Australia, Guo Y.J. and Barton S.K., University of Bradford, United Kingdom</i>	
E3.2	Blind Adaptive Equalization and Interference Cancellation for Wireless Personal Communications	307
	<i>Lo B.C.W. and Letaief K.B., The Hong Kong University of Science & Technology, Hong Kong</i>	
E3.3	High Bit Rate $\pi/4$ -QPSK Modem with a New Equalizer Based on Sequence Estimation for Mobile Communications	312
	<i>Kamio Y., Moriyama E., Sasaoka H., Hamaguchi K. and Sugimoto Y., Communications Research Laboratory, Japan</i>	
E3.4	Soft-Output Equalization with TCM for Wireless Communications	317
	<i>Chen Y., Letaief K.B., The Hong Kong University of Science and Technology, Hong Kong and Chuang J.C.-I., AT&T Research, USA</i>	
E3.5	A Blind Equalization with the Variable Decision Region	322
	<i>Kwon S.-L., Moon T.-H., Lee J.H. and Kang C.-E., Yonsei University, Korea</i>	

E4 Acquisition and Tracking

Organiser: G. Povey

E4.1	An All-Digital Frequency Synchronization Scheme for OFDM Systems	327
	<i>Zhenbong L. and Mämmelä A., VTT Electronics, Finland</i>	
E4.2	Performance of the Time-Shared Code Tracking Loop with Extended Tracking Range for Frequency Hopped Signals	332
	<i>Saba T., Sato Y., Nagoya Institute of Technology and Mori S., Nippon Institute of Technology, Japan</i>	
E4.3	Blind Adaptive Code Acquisition for Multiuser DS-CDMA Systems	337
	<i>Cheung P.K.P. and Rapajic P.B., Research School of Information Science and Engineering, Australia</i>	
E4.4	An Initial Sequence Acquisition Technique for Multicarrier Time Division Duplex CDMA Systems on a Rayleigh Fading Channel	342
	<i>Sanada Y., Tokyo Institute of Technology and Nakagawa M., Keio University, Japan</i>	
E4.5	Acquisition Performance of Gold Sequence Based DS-CDMA Systems	347
	<i>Lee Y.-H. and Kim S.-J., Seoul National University, Korea</i>	

E5 Receiver Design and Implementation

Organiser: Z. Zvornar

E5.1	Receiver Structures and Error Rate Performance for Signals with Unknown Frequency	352
	<i>Schonhoff T.A., LinCom Corporation and Giordano A.A., GTE Laboratories Incorporated, USA</i>	
E5.2	Using the High Order Nyquist Zones in the Design of Efficient Multi-Channel Digital Upconverters	355
	<i>Sabel L.P., University of South Australia, Australia and Harris F.J., San Diego State University, USA</i>	
E5.3	A Technique for Detecting AMPS Intermodulation Distortion in an IS-95 CDMA Mobile	361
	<i>Gray S.D. and Kenney T., Nokia Mobile Phones, USA</i>	
E5.4	Effect of Sample Clock Jitter on IF-Sampling IS-95 Receivers	366
	<i>Stewart K.A., Motorola Cellular Applied Research, USA</i>	
E5.5	VLSI Implementation of Digital Receivers for Paging and PCS	371
	<i>Subramanian R., Barberis M., Synopsys, Inc., USA, Dawid H. and Koch K.-J., Synopsys, Inc., Germany</i>	

F1 Cellular Systems

Organisers: V. Bhargava and J. Savusalo

F1.1	Improved Intelligent Underlay-Overlay Combined with Frequency Hopping in GSM	376
	<i>Wigard J., Nielsen T.T., Michaelsen P.H. and Mogensen P., Aalborg University, Denmark</i>	
F1.2	A Macro-Microcellular System with Mobile User Speed Estimation	381
	<i>Grimaldi A., Marano S., Mastroianni C. and Scarpelli M.T., D.E.I.S. Università della Calabria, Italy</i>	
F1.3	Performance and Handoff Analysis of an Integrated Voice-Data Cellular System	386
	<i>Calin D. and Zeghlache D., Institut National des Telecommunications, France</i>	
F1.4	Quality of Service and Planning Sensitivity Evaluation for Macrocellular Mobile Networks	391
	<i>Kosbi V., Edwards D.J., University of Oxford, Mehler M.J., BT Laboratories and Constantinou C., University of Birmingham, United Kingdom</i>	

F1.5	Handover Delay and Hysteresis Margin in Microcells and Macrocells <i>Zonoozi M., Telecommunication Company of Iran, Iran and Dassanayake P., Victoria University of Technology, Australia</i>	396
F2	Dynamic Channel Allocation Organiser: S. Tekinay	
F2.1	A Self-Adaptive Prioritised Hand-off DCA Strategy for a Microcellular Environment <i>Ortigoza-Guerrero L. and Aghvami A.H., King's College London, United Kingdom</i>	401
F2.2	Distributed Channel Allocation Algorithm with Power Control <i>Ni S., Helsinki University of Technology, Finland</i>	406
F2.3	All-Successful Channel Occupations in PRMA-DCA Mobile Wireless PCS <i>Toloo M. and Abu-Hakima S., National Research Council of Canada, Canada</i>	411
F2.4	Frequency Reuse and Distributed Dynamic Channel Assignment in Microcellular Systems <i>Cruz-Pérez F.A. and Lara-Rodriguez D., CINVESTAV-IPN, Mexico</i>	415
F2.5	Performance of Time-Frequency Sliced Systems with Dynamic Channel Allocation <i>Adi A.P., Onozato Y., Gunma University, Japan</i>	420
F3	Wireless Packet Access I Organiser: C.-K. Tob	
F3.1	On the Performance Improvement of Packet Radio Systems with One Single Interferer due to Random Transmission Power Strategy <i>Verdone R., University of Bologna, DEIS, Italy</i>	425
F3.2	Multi-Frame Packet Reservation Multiple Access for Variable-Rate Multimedia Users <i>Brecht J., Hanzo L. and Del Buono M., University of Southampton, United Kingdom</i>	430
F3.3	MACA-BI (MACA By Invitation) A Receiver Oriented Access Protocol for Wireless Multihop Networks <i>Talucci F., Politecnico di Bari, Italy, Gerla M., University of California, USA and Fratia L., Politecnico di Milano, Italy</i>	435
F3.4	CDPD Performance: A Joint Analysis of the Physical and MAC Layers <i>Resbeff S., GTE Laboratories, USA</i>	440
F3.5	Analysis and Optimization of an Adaptive Go-Back-N ARQ Protocol for Time-Varying Channels <i>Annamalai A., Freiberg L. and Bhargava V.K., University of Victoria, Canada</i>	447
F4	Modulation Organiser: L. Hanzo	
F4.1	Phase Noise Effects in QAM Systems <i>Corvaja R. and Pupolin S., University of Padova, Italy</i>	452
F4.2	Multicode Modulations for High-Speed Wireless Data Transmission <i>Kuganesan P., Letaief K.B. and Chen Y., The Hong Kong University of Science & Technology, Hong Kong</i>	457
F4.3	Transform Modulation for Mobile Communications <i>Lamarca M. and Vázquez G., Polytechnic University of Catalonia, Spain</i>	462

F4.4	Laboratory Experimental Results of an Adaptive Modulation/TDMA/TDD for Wireless Multimedia Communication Systems	467
	<i>Sampei S., Ue T., Morinaga N., Osaka University, and Hamaguchi K., Communications Research Laboratory, MPT, Japan</i>	
F4.5	Adaptive Modulation System with Discrete Power Control and Predistortion-Type Nonlinear Compensation for High Spectral Efficient and High Power Efficient Wireless Communication Systems	472
	<i>Arimochi K., Daiben Corporation, Sampei S. and Morinaga N., Osaka University, Japan</i>	
F5	Security in Wireless Networks	
	Organiser: K. Kärkkäinen	
F5.1	The Wire-Tap Channel Concept Against Eavesdropping of Indoor Radio Telephone	477
	<i>Korjik V., Yakovlev V. and Babkov I., St.-Petersburg University of Telecommunications, Russia</i>	
F5.2	An Efficient Key Exchange Protocol for Cryptographically Secure CDMA Systems	480
	<i>Shepherd S.J., Barton S.K. and Kemp A.H., University of Bradford, United Kingdom</i>	
F5.3	Security of Wireless ATM Networks	485
	<i>Patiyoot D. and Shepherd S.J., University of Bradford, United Kingdom</i>	
F5.4	Augmented Encrypted Key Exchange Using RSA Encryption	490
	<i>Barmawi A.M., Keio University, Takada S., Nara Institute of Science and Technology and Doi N., Keio University, Japan</i>	
F5.5	A Secure Registration Protocol for Wireless Internet	495
	<i>Chin L.-P., Shih Chien University, Taiwan</i>	
G1	Propagation II	
	Organiser: P. Vainikainen	
G1.1	Performance Evaluation of a Ray Tracing Based Microcellular Coverage Prediction Tool	500
	<i>Wagen J.-F., Lachat E. and Li J., Swiss Telecom PTT, Switzerland</i>	
G1.2	Radio Imaging for the Validation of Propagation Predictions	505
	<i>Moss J.G.O., Street A.M., Edwards D.J., University of Oxford and Allen K., B.T. Laboratories, United Kingdom</i>	
G1.3	Propagation Measurements at the 5.2 GHz in Commercial and Domestic Environments	509
	<i>Hafezi P., University of Bristol, Wedge D., Hewlett Packard Laboratories, Beach M.A., University of Bristol and Lawton M., Hewlett Packard Laboratories, United Kingdom</i>	
G1.4	Theoretical Analysis on Influence of Spatial and Temporal Dispersion of a Propagation Channel for Combined RAKE and Phased Array in Mobile CDMA Systems	514
	<i>Iwai H., KDD R&D Laboratories, Japan, Buljore S., Zeidler J.R. and Milstein L.B., University of California, USA</i>	
G1.5	Millimeter Wave Wideband Communication Performance for Various Corridors	519
	<i>Chiu C.-C. and Wang C.-P., Tamkang University, Taiwan</i>	
G2	Third Generation Systems II	
G2.1	Multidimensional PRMA (MD PRMA) - A Versatile Medium Access Strategy for the UMTS Mobile to Base Station Channel	524
	<i>Brand A.E. and Agbiami A.H., Kings's College London, United Kingdom</i>	

G2.2	Wireless Portable Communications Using Pre-Rake CDMA/TDD/QPSK Systems with Different Combining Techniques and Imperfect Channel Estimation	529
	<i>El-Khamy S.E., Alexandria University, Egypt, Sourour E.E., Ericsson, USA and Kadous T.A., Alexandria University, Egypt</i>	
G2.3	A Fully Programmable Prototype for the Experimentation of the SDMA Concept and Use of Smart Antennas for UMTS and GSM/DCS1800 Networks	534
	<i>Monot J.-J., Thibault J., Chevalier P., Papon F., Thomson-CSF Communications, Mayrargue S. and Levy A., CNET/France Telecom, France</i>	
G2.4	Mobile Aware Multimedia Applications for UMTS: The ACTS on the Move Project	539
	<i>Harmer J., Martlesham Heat BT Laboratories, United Kingdom</i>	
G2.5	Efficient Call Admission Control for Mixed Voice/Data Service in FPLMTS	544
	<i>Huang Y., Korea University, Han Y., Electronics and Telecommunication Research Institute and Kim Y., Korea University, Korea</i>	
G3	Multiuser Communications	
	Organiser: J. Lilleberg	
G3.1	Cellular Coverage Analysis of Wideband MUD-CDMA System	549
	<i>Holma H., Toskala A. and Ojanperä T., Nokia Research Center, Finland</i>	
G3.2	Modified Adaptive LMMSE Receiver for DS-CDMA Systems in Fading Channels	554
	<i>Latva-aho M. and Juntti M., University of Oulu, Finland</i>	
G3.3	Parallel Interference Cancellation Receiver for DS-CDMA Systems in Fading Channels	559
	<i>Latva-aho M., Juntti M. and Heikkilä M., University of Oulu, Finland</i>	
G3.4	Improved CDMA Performance Through Bias Reduction for Parallel Interference Cancellation	565
	<i>Correal N.S., Buehrer R.M. and Woerner B.D., Virginia Polytechnic Institute and State University, USA</i>	
G3.5	The Asymptotic Multiuser Efficiency of M-Stage Interference Cancellation Receivers	570
	<i>Buehrer R.M., Bell Laboratories and Woerner B.D., Virginia Polytechnic Institute and State University, USA</i>	
G4	Antenna Diversity	
	Organiser: A. Giordano	
G4.1	A Study of Polarisation Diversity for a Microcellular Environment	575
	<i>Dell'Anna M., King's College London, Mobebbi B.B., GSM Research Group, Motorola, Brand A.E. and Agbami H.A., King's College London, United Kingdom</i>	
G4.2	Impact of the Mobile Antenna Inclination on the Polarisation Diversity Gain in a DCS1800 Network	580
	<i>Laibo-Steffens J.K. and Lempiäinen J.J.A., Nokia Telecommunications, Finland</i>	
G4.3	Handheld Antenna Diversity Evaluation in a DCS-1800 Small Cell	584
	<i>Pedersen G.F., Aalborg University, Denmark, Widell S., Telia Research and Østervall T., Allgon Mobile Communications, Sweden</i>	
G4.4	Diversity Arrangements for Internal Handset Antennas	589
	<i>Erätuuli P., Helsinki University of Technology, Finland and Bonek E., Technische Universität Wien, Austria</i>	

G4.5	Adaptive Directional Receiver with Different Antenna Spacing for CDMA <i>Yoshii I. and Kobno R., Yokohama National University, Japan</i>	594
G4.6	Downlink Control Channel Transmission with Antenna Directivity Switching or Space Diversity at Base Stations <i>Taromaru M., Oishi M., Kyushu Matsushita Electric Co. and Akaiwa Y., Kyushu University, Japan</i>	599
G5	Wireless Local Loop	
	Organiser: I. Oppermann	
G5.1	Subscriber Care of a Wireless Local Loop System <i>Helokunnas T. and Janhonen R., Nokia Telecommunications, Finland</i>	604
G5.2	"Hot Spot" Trial for DECT as a WLL Technology <i>Mansel D., Fachhochschule Gelsenkirchen, Müller A., Siemens AG and Plenge C., Kommunikationssysteme GmbH, Germany</i>	609
G5.3	Terrestrial Versus Mobile Satellite Based Broadband Networks for Use in Feeding Wireless Local Loop Systems <i>Guntsch A., Aachen University of Technology, Germany</i>	614
G5.4	WLL: Wireless Local Loop-Alternative Technologies <i>Noerpel A.R., Hughes Network Systems, USA</i>	619
G5.5	A Multiple Trellis Coded Q ² PSK System for Wireless Local Loop Applications <i>van Wyk D.J., University of Pretoria, Lötter M.P., Alcatel Altech Telecoms, Linde L.P. and van Rooyen P.G.W., University of Pretoria, South Africa</i>	624
H1	Propagation III	
	Organiser: I. Oppermann	
H1.1	A High Speed Adaptive Methodology for Calculating UHF Propagation Loss over Terrain <i>Brennan C., Cullen P. and Rossi L., Trinity College Dublin, Ireland</i>	629
H1.2	Investigating the Effects of Antenna Directivity on Wireless Indoor Communication at 60 GHz <i>Williamson M.R., Athanasiadou G.E., Nix A.R., University of Bristol, United Kingdom</i>	635
H1.3	Propagation Aspects of Frequency Hopping Spread Spectrum <i>Fitton M.P., Nix A.R. and Beach M.A., University of Bristol, United Kingdom</i>	640
H1.4	Accurate Identification of Scatterers for Improved Microcell Propagation Modelling <i>de Jong Y.L.C. and Herben M.H.A.J., Eindhoven University of Technology, The Netherlands</i>	645
H1.5	High Resolution of Electromagnetic Waves in Time-Varying Radio Channels <i>Pedersen K.I., Aalborg University, Denmark, Fleury B.H., Swiss Federal Institute of Technology, Switzerland and Mogensen P.E., Aalborg University, Denmark</i>	650
H2	System Demonstrations and Testbeds	
	Organiser: M. Lee	
H2.1	WASP: A Transparent Wireless ATM Access Demonstrator <i>Awater G.A., Lucent Technologies (Bell Laboratories), The Netherlands</i>	655
H2.2	Initial Results from the 'Link-CDMA' Testbed, a Mobile Radio Demonstration System <i>Kemp A.H., Barton S.K., University of Bradford, United Kingdom and Aldis J.P., Ascom STU, Switzerland</i>	660

H2.3	Modelling Approach Used in the Real Time Emulator of the Rainbow Demonstrator	664
	<i>Díaz P., Olmos J., UPC, Berberana I., Telefónica I + D and Casadevall F., UPC, Spain</i>	
H2.4	Wideband CDMA Test System	669
	<i>Pajukoski K. and Savusalo J., Nokia Telecommunications, Finland</i>	
H3	Wireless Internet Access	
H3.1	Medium Access Control for Advanced Cellular Internet Services	673
	<i>Chuang J.C. and Sollenberger N.R., AT&T Labs-Research, USA</i>	
H3.2	Voice and Data Integration on TCP/IP Wireless Networks	678
	<i>Zabedi A. and Pablavan K., Worcester Polytechnic Institute, USA</i>	
H3.3	An Architecture for Wide-Area Mobile Internet Access	683
	<i>Rajagopalan B., NEC USA, C&C Research Laboratories, USA</i>	
H3.4	Towards an Asymmetric Air Interface Protocol for Wireless Internet Access	688
	<i>Jain R. and Chang L.F., Bell Communications Research, USA</i>	
H4	Error Control Coding I	
	Organiser: B. Vucetic	
H4.1	Performance Evaluation of RS-Coded DS/CDMA Systems with Orthogonal Signalling for Microcellular Radio Communications	693
	<i>Iossifides A.C. and Pavlidou F.-N., Aristotle University of Thessaloniki, Greece</i>	
H4.2	Performance Enhancement of a Dual-Signal Receiver System for Simultaneous Reception of Two Co-Channel Signals by Applying Error Correction Coding	698
	<i>Witrisal K., Graz University of Technology, Austria, Janssen G.J.M. and van der Wijk F., Delft University of Technology, The Netherlands</i>	
H4.3	Source-Matched Channel Coding and Networking Techniques for Mobile Communications	704
	<i>Babich F. and Vatta F., Università di Trieste, Italy</i>	
H4.4	ARQ Schemes with Adaptive Modulation/TDMA/TDD Systems for Wireless Multimedia Communication Services	709
	<i>Natjoh M., Sampei S., Morinaga N., Osaka University and Kamio Y., Communications Research Laboratory, MPT, Japan</i>	
H4.5	Optimum Non-Iterative Turbo-Decoding	714
	<i>Breiling M. and Hanzo L., University of Southampton, United Kingdom</i>	
H5	Code Division Multiple Access II	
H5.1	Error Characteristics of CDMA and Impact on Voice, E-mail, and Web Pages	719
	<i>Cypher D. and Wakid S., National Institute of Standards and Technology, USA</i>	
H5.2	Finite Word Length Effects on the Performance of MMSE Receiver for DS-CDMA Systems	724
	<i>Yasukawa K. and Milstein L.B., University of California, USA</i>	
H5.3	Adaptive Access Control for Multimedia Traffic In a CDMA Cell with Imperfect Power Control	729
	<i>Larijani P.R., Hafez R.H. and Lambadaris I., Carleton University, Canada</i>	
H5.4	Tracking Fading Multipath Channel Parameters, in CDMA Systems, Using a Subspace Based Method – An Implementation Perspective	734
	<i>Sengupta C., Cavallaro J.R. and Aazhang B., Rice University, USA</i>	

H5.5	Near Single User Performance Using Iterative Multi-User Detection for CDMA with Turbo-Code Decoders	740
	<i>Reed M.C., Alexander P.D., Asenstorfer J.A., University of South Australia, Australia and Schlegel C.B., University of Utah, USA</i>	

I1 Wireless Networks

Organisers: C. Pomalaza-Raez and V. Bhargava

I1.1	Modelling the TRX Configurations for Intelligent Underlay – Overlay Radio Networks	745
	<i>Tian J. and Laakso J.-P., Nokia Telecommunication, Finland</i>	
I1.2	Analysis of User Membership in Cellular CDMA Networks	750
	<i>Santucci F., University of L'Aquila, Italy, Huang W. and Bhargava V.K., University of Victoria, Canada</i>	
I1.3	The Throughput Analysis of the DECT Access for Data Services	755
	<i>Capone A., Borgonovo F., Fratta L. and Musumeci L., Politecnico di Milano, Italy</i>	
I1.4	Interference Simulations for a Home Base Station System	761
	<i>Toy R., Ericsson Inc., USA and Haartsen J., Ericsson Mobile Communications AB, Sweden</i>	
I1.5	A Hierarchical Cellular System with Reneging and Dropping for Waiting New and Handoff Calls	766
	<i>Chang C., Chang C.-J. and Lo K.-R., National Chiao Tung University, Taiwan</i>	

I2 Radio Resource Allocation

Organiser: S. Tekinay

I2.1	Channel Assignment Methods in Frequency Hopping Cellular Radio Networks	771
	<i>Sarkola E., Nokia Telecommunications, Finland</i>	
I2.2	Radio Resource Management in a Novel Indoor GSM Base Station System	776
	<i>Silventoinen M.I., Nokia Research Center and Posti H., Nokia Telecommunications, Finland</i>	
I2.3	Traffic Adaptive Spectrum Allocation for Mobile Communications Systems	781
	<i>Demestichas P.P., Demesticha V.P., Tzifa E.C., Anagnostou M.E. and Theologou M.E., National Technical University of Athens, Greece</i>	
I2.4	Comparison of Energy Minimising Algorithms for Channel Assignment in Mobile Radio Networks	786
	<i>Lochrie G.D., van Eijl C.A. and Mehler M.J., BT Laboratories, United Kingdom</i>	
I2.5	Performance Evaluation of Random Power Assignment Scheme on Cellular Mobile Communications with Finite Population	791
	<i>Wen J.-H., Hsu K.-G., Chen E.-S., National Chung Cheng University and Wen J.-C., Chung-Yuan Christian University, Taiwan</i>	

I3 Equalization/Deconvolution

Organiser: T. Kaiser

I3.1	Equalisation and Frequency Offset Correction for HIPERLAN	796
	<i>Tellambura C., Monash University, Australia, Johnson I.R., Guo Y.J. and Barton S.K., University of Bradford, United Kingdom</i>	
I3.2	Super Resolution and Deconvolution of Angular Power Spectra	801
	<i>Eggers P.C.F., Aalborg University, Denmark</i>	
I3.3	Deconvolution Noise in DS-Radio Channel Sounding and a Polynomial Compensation Method	806
	<i>Korhonen T. and Häggman S.-G., Helsinki University of Technology, Finland</i>	

13.4	Parameter Tracking of STE for IS-136 TDMA Systems with Rapid Dispersive Fading and Co-Channel Interference	811
	<i>Li Y.G., Winters J.H., Sollenberger N.R., AT&T Labs-Research, USA</i>	
13.5	Adaptive MLSE Receiver for Dual-Band IS-136 TDMA	816
	<i>Lozano A. and Peponides G., Pasific Communication Sciences Inc., USA</i>	
14	Synchronisation	
	Organiser: M. Katayama	
14.1	All-Digital Symbol Timing Recovery Scheme Utilizing Efficient IIR Prefiltering	821
	<i>Väisänen K. and Renfors M., Tampere University of Technology, Finland</i>	
14.2	Efficient Near Optimal Maximum Likelihood Symbol Timing Recovery in Digital Modems	825
	<i>Tuukkanen V., Vesma J. and Renfors M., Tampere University of Technology, Finland</i>	
14.3	Comparison of MUSIC and Matched Filter Delay Estimators in DS-CDMA	830
	<i>Luukkanen P., Nokia Research Center and Joutsensalo J., Helsinki University of Technology, Finland</i>	
14.4	A Synchronization System with Differential Detector for the SS-CSC System	835
	<i>Habuchi H., Takebayashi T., Ibaraki University and Hasegawa T., Saitama University, Japan</i>	
15	RF/IC Technology	
	Organiser: K. Kermarrec	
15.1	A Single Chip Radio Transceiver for DECT	840
	<i>Atkinson S., Shab A. and Strange J., Analog Devices, United Kingdom</i>	
15.2	New Aspects on Nonlinear Power Amplifier Modeling in Radio Communication System Simulations	844
	<i>Honkanen M. and Häggman S.-G., Helsinki University of Technology, Finland</i>	
15.3	Novel Ceramic Antenna Filters for GSM/DECT and GSM/PCN Network Terminals	849
	<i>Hagström P., LK-Products, Finland</i>	
15.4	A Low-Noise Direct Conversion PSK Receiver for TDMA Land Mobile Communications	854
	<i>Hayashi R., Nakajima T., Shimozawa M., Miyake M. and Fujino T., Information Technology R&D Center, Mitsubishi Electric Corporation, Japan</i>	
15.5	Performance of Automatic Phase Adjustment Using Supply Current Minimisation in a RF Feedback Lineariser	858
	<i>Faulkner M., Contos D. and Briffa M., Victoria University of Technology, Australia</i>	
J1	Networking	
	Organiser: C. Pomalaza-Raez	
J1.1	Performance of a CDMA Based Hierarchical Cell Structure Network	863
	<i>Hämäläinen S., Nokia Research Center, Lilja H., Nokia Mobile Phones, Lokio J., Nokia Telecommunications and Leinonen M., Nokia Mobile Phones, Finland</i>	
J1.2	Protocol and Signalling Aspects of Joint Detection CDMA	867
	<i>Mayer J., Schlee J. and Weber T., University of Kaiserslautern, Germany</i>	
J1.3	PCS Registration and Call Delivery in Broadband Wireless Networks	872
	<i>Rajagopalan S., Pollini G. and Chang L.F., Bellcore, USA</i>	

J1.4	A Distributed Multicast Routing Protocol for Ad-hoc (Flat) Mobile Wireless Networks	877
	<i>Bhattacharya R. and Ephremides A., University of Maryland, USA</i>	
J1.5	Interconnection Strategies for Wireless Access Networks	882
	<i>Yanikomeroglu H. and Sousa E.S., University of Toronto, Canada</i>	
J2	Power Control	
	Organiser: R. Pichna	
J2.1	Power Control in Simulcast Digital Cellular Radio Networks	887
	<i>Zürbes S., Aachen University of Technology, Germany</i>	
J2.2	Analysis of Imperfect Power Control in CDMA Cellular Systems	892
	<i>Tam W.M. and Lau F.C.M., The Hong Kong Polytechnic University, Hong Kong</i>	
J2.3	Influence of the Distribution of Mobile Users on a C/I Balanced Multi Antenna Digital Cellular Radio System	898
	<i>Schmalenberger R. and Blanz J.J., University of Kaiserslautern, Germany</i>	
J2.4	Distributed Power Control for Variable QoS in a CDMA Wireless System	903
	<i>Morikawa H. and Kajiyu T., The University of Tokyo, Japan</i>	
J2.5	Short-Term Fading Prediction-Based Power Control Method for DS-CDMA Cellular Mobile Radio Networks	908
	<i>Wen J.-H., Yeh L.-C., Chiou J.-R., National Chung Cheng University, Taiwan</i>	
J3	Wireless Packet Access II	
	Organiser: L. Fratta	
J3.1	Transmission of Multimode and Variable-Rate Encoded Speech Samples on Packet Switched Radio Networks Handling Wide Band Voice Information	913
	<i>Babich F., Valentinuzzi E. and Vatta F., Università di Trieste, Italy</i>	
J3.2	Generalized Tree Multiple Access Protocols in Packet Switching Networks	918
	<i>Sun Y.-K., Chen K.-C. and Tuu D.-C., National Tsing Hua University, Taiwan</i>	
J3.3	Performance Analysis of Packet Reservation Multiple Access with an Adaptive Array	923
	<i>Kobayashi T. and Sasase I., Keio University, Japan</i>	
J3.4	Adaptive Channel Access Protocol for Asynchronous Inter-Vehicle Communication Network Using Spread Spectrum	928
	<i>Maeda M. and Nakagawa M., Keio University, Japan</i>	
J3.5	An Investigation of Permission Probability Control in Reserved/Random CDMA Packet Radio Communications	933
	<i>Mori K. and Ogura K., YRP Mobile Telecommunications Key Technology Research Laboratories Co., Ltd., Japan</i>	
J4	Modulation and Fading Channels	
J4.1	Statistical Multiplexing for Mitigating Latency in Adaptive Modems	938
	<i>Torrance J.M. and Hanzo L., University of Southampton, United Kingdom</i>	
J4.2	Reduction of Multipath Effects for FSK with Frequency-Discriminator Detection	943
	<i>Petrovic R., University of Mississippi, USA and Molisch A., Technische Universität Wien, Austria</i>	

J4.3	Viterbi Decoding Differential Detection with Space Diversity for 16DAPSK on Rayleigh Fading Channels	949
	<i>Ohtsuki T., Science University of Tokyo, Japan</i>	
J4.4	Channel Estimation Using Time Multiplexed Pilot Symbols for Coherent Rake Combining for DS-CDMA Mobile Radio	954
	<i>Andoh H., Sawabashi M. and Adachi F., NTT Mobile Communications Network Inc., Japan</i>	
J4.5	The Effects of Rician Fading and Multiple CCI on Differentially Detected GMSK Signals	959
	<i>Su Y.T., Kao W.-C. and Li J.-S., National Chiao Tung University, Taiwan</i>	
J5	Optical Communications in Wireless Networks	
	Organiser: J. Kahn	
J5.1	A 100 Mbit/s Tracked Optical Wireless Telepoint	964
	<i>Wisely D. and Neild I., British Telecommunications plc, United Kingdom</i>	
J5.2	High Speed Wireless IR-LANs Using Spatial Addressing	969
	<i>Street A.M., Samaras K., O'Brien D.C. and Edwards D.J., University of Oxford, United Kingdom</i>	
J5.3	Performance of an Indoor Optical Wireless PPM-CDMA System with Interference Cancellation Schemes	974
	<i>Hwang S.S., Park C. and Lee J.H., Seoul National University, Korea</i>	
J5.4	Optical Multi-Wavelength PPM for High Data Rate Transmission on Indoor Channels	979
	<i>Tanaka Y. and Nakagawa M., Keio University, Japan</i>	
J5.5	Fiber-Optic Microcellular Communication System Using Frequency Modulated LD and Optical Discriminator and Its Nonlinear Distortion Suppression	984
	<i>Tsukamoto K., Fujii S., Sanjo P. and Komaki S., Osaka University, Japan</i>	
K1	User Localisation and Tracking	
K1.1	Tracking of Mobile Users in a Mobile Communications System Using Adaptive Convergence Parameter	989
	<i>Karttunen P.T., Laakso T.I., Helsinki University of Technology and Lilleberg J., Nokia Mobile Phones, Finland</i>	
K1.2	A Comparative Study of Tracking Strategies Using Directional Mobility Models	994
	<i>Lombardo A., Palazzo S. and Tedesco M., University of Catania, Italy</i>	
K1.3	A New Approach to Improve Mobile Localisation Based on Angular Deviation Measurements in Urban Areas	999
	<i>Tatkeu C., Berbineau M. and Heddebaut M., Inrets-Leost, France</i>	
K1.4	A Dynamic Individualized Location Management Algorithm	1004
	<i>Scourias J., Lockheed Martin and Kunz T., University of Waterloo, Canada</i>	
K1.5	Multilayered Model Strategy for Optimal Mobile Location Tracking	1009
	<i>Lee H.C., Northern Telecom and Sun J., Nova Southeastern University, USA</i>	
K2	Satellite Communications	
	Organiser: T. Ikegami	
K2.1	Characterisation of the Satellite-to-Indoor Channel Based on Narrow-Band Scalar Measurements	1014
	<i>Molnár B.G., Frigyes I., Bodnár Z., Herczku Z., Kormányos Z., Bérces J., Papp I. and Jubász L., Technical University of Budapest, Hungary</i>	

K2.2	Simultaneous Estimation of Code and Frequency of DS/SS Signals of Multiple-LEO-Satellite Communication Systems	1019
	<i>Ishizu M., Katayama M., Yamazato T. and Ogawa A., Nagoya University, Japan</i>	
K2.3	Suppression of Interferences over SATCOM Links with Transparent Transponders	1024
	<i>Kohl M., DASA, Wiesler A. and Jondral F., Universität Karlsruhe, Germany</i>	
K2.4	Performance Analysis of Dynamic Channel Assignment and Handover Resource Reservation Schemes for Mobile Satellite Systems	1028
	<i>Bjelajac B., Aachen University of Technology, Germany</i>	
K2.5	Traffic Performance of Integrated Satellite-Terrestrial Mobile Networks	1029
	<i>Graziosi F., University of L'Aquila, Ruggieri M., University of Roma and Santucci F., University of L'Aquila, Italy</i>	

K3 Wireless Multimedia

Organiser: R. Prasad

K3.1	Time Division Duplex-Code Division Multiple Access for Mobile Multimedia Services	1034
	<i>Povey G.J.R., The University of Edinburgh, Scotland</i>	
K3.2	Mowgli: Improvements for Internet Applications Using Slow Wireless Links	1038
	<i>Alanko T., Kojo M., Liljeberg M. and Raatikainen K., University of Helsinki, Finland</i>	
K3.3	D-RAMA: A New Deterministic MAC Protocol for Wireless Multimedia Communications	1043
	<i>Santiv��ez J. and Boisson de Marca J.R., Pontificia Universidade Cat��lica do Rio de Janeiro, Brazil</i>	
K3.4	Stored Media Synchronization Based on Buffer Occupancy in PHS	1049
	<i>Kato M., Usui N., Sanyo Electric Co., Ltd. and Tasaka S., Nagoya Institute of Technology, Japan</i>	
K3.5	Video Transmission Performance with Adaptive Time Diversity over PHS Channel	1054
	<i>Kondo Y. and Tanaka T., Nippon Telegraph and Telephone Corporation, Japan</i>	
K3.6	A Scheduling Scheme for the Heterogenous Multimedia Services in Mobile Broadband Systems	1059
	<i>Yae B.H., Lee S.C. and Kim H.S., Electronics and Telecommunication Research Institute, Korea</i>	

K4 Diversity Techniques

Organiser: A. Giordano

K4.1	Diversity Evaluation Based on Correlation Properties of Rician/Rayleigh Fading Signals Subject to Additive Gaussian Noise	1064
	<i>Eggers P.C.F., Aalborg University, Denmark</i>	
K4.2	1.9 GHz Measurement-Based Analysis of Diversity Power Versus the Number of RAKE Receiver Tines at Various System Bandwidths	1069
	<i>Martin G.T. and Faulkner M., Victoria University of Technology, Australia</i>	
K4.3	Transmitter Macrodiversity in Radio Fibre Microcellular Networks	1074
	<i>Rivas I., The University of Leeds and Lopes L.B., GSM Research, Motorola, United Kingdom</i>	
K4.4	Diversity Techniques for Blind Channel Equalization in Mobile Communications	1079
	<i>Lamarca M. and V��quez G., Polytechnic University of Catalonia, Spain</i>	
K4.5	Enhancement of a Dual-Signal Receiver Using Pre-Detection Microdiversity for Narrowband and Wideband Signals	1084
	<i>Janssen G.J.M., Delft University of Technology, The Netherlands</i>	

K5 Multicarrier Techniques

Organiser: P. Jung

K5.1	A Novel Peak Power Reduction Scheme for OFDM.....	1090
	<i>Müller S. and Huber J.B., Universität Erlangen-Nürnberg, Germany</i>	
K5.2	Performance Analysis of an OFDM Based Wireless ATM Communication System	1095
	<i>Harada H., Ministry of Posts & Telecommunications, Japan and Prasad R., Delft University of Technology, The Netherlands</i>	
K5.3	A New Nonlinear Distortion Compensator for OFDM Signals in a Multipath Fading Channel	1100
	<i>Okada M., Nishijima H. and Komaki S., Osaka University, Japan</i>	
K5.4	Multicarrier/QAM-Level-Controlled Adaptive Modulation for Land Mobile Communication Systems	1105
	<i>Hamaguchi K. and Moriyama E., Communications Research Laboratory, MPT, Japan</i>	
K5.5	Multicarrier Assignment with Random Pulse for Multicarrier High Speed Decentralized Wireless LAN	1110
	<i>Fujii T., Atarashi H. and Nakagawa M., Kyoto University, Japan</i>	

L1 Channel Measurement and Simulation Systems

Organiser: J. Talvitie

L1.1	Phase Noise in a Direct Sequence Based Channel Sounder	1115
	<i>Kivinen J. and Vainikainen P., Helsinki University of Technology, Finland</i>	
L1.2	Digital Stepping Correlator in a Wideband Radio Channel Measurement System	1120
	<i>Hämäläinen M., Nykänen A., Hovinen V. and Leppänen P., University of Oulu, Finland</i>	
L1.3	A New Multi-Path Vector Channel Simulator for the Performance Evaluation of Antenna Array Systems	1125
	<i>Stéphenne A. and Champagne B., Université du Québec, Canada</i>	
L1.4	Microcell Automatic Propagation Measuring System with Cell-Site Management Database Access and Service-Area Evaluation	1130
	<i>Suwa K., Ichitsubo S., Oyoshi T. and Kawasaki R., NTT Wireless Systems Laboratories, Japan</i>	

L2 Emerging Techniques in Wireless Communications

L2.1	T-Algorithm Detection of Partial Response Continuous Phase Modulated Signals over Multipath Channels	1135
	<i>Ince E.A., Guo Y.J. and Barton S.K., University of Bradford, United Kingdom</i>	
L2.2	Precoding over a Dynamic Continuous Wave Digital Mobile Channel	1140
	<i>Meehan J.P. and Fagan A.D., University of College Dublin, Ireland</i>	
L2.3	Fuzzy Logic for Robust Detection in Wireless Communications	1145
	<i>Pérez-Neira A., Lagunas M.A. and Bas J., Polytechnic University of Catalonia, Spain</i>	
L2.4	Self-Engineering in Wireless Office Service Systems: Startup Procedures	1150
	<i>Chawla K., AT&T Laboratories, Valenzuela R., Bell Laboratories and Dunn M., AT&T Wireless Services, USA</i>	
L2.5	Self-Engineering in Wireless Office Service Systems: Procedures During Operation	1156
	<i>Chawla K., AT&T Laboratories, Valenzuela R., Bell Laboratories and Dunn M., AT&T Wireless Services, USA</i>	

L3 Interference Cancellation

Organiser: K. Ben Letaief

L3.1	Joint Interference Cancellation and Viterbi Decoding in DS-CDMA	1161
	<i>Koobrangpour M.-R., Royal Institute of Technology and Svensson A., Chalmers University of Technology, Sweden</i>	
L3.2	Volterra Based Receivers for DS-CDMA 1166	
	<i>Tanner R. and Cruickshank D.G.M., The University of Edinburgh, Scotland</i>	
L3.3	Cochannel Interference in Wireless LANS and Fuzzy Clustering	1171
	<i>Golding P., Magic E Company Ltd. and Jones A.E., Hewlett-Packard Laboratories, United Kingdom</i>	
L3.4	Improving Receiver Performance for Pilot-Aided Frequency Selective CDMA Channels Using a MMSE Switch Mechanism and Multipath Noise Canceller	1176
	<i>Huang H. and I C.-L., Bell Labs, USA</i>	

L4 Error Control Coding II

Organiser: B. Vucetic

L4.1	Soft-Decision Decoding of Binary Linear Block Codes Using t-Algorithm	1181
	<i>Kokkonen M. and Kalliojärvi K., Nokia Research Center, Finland</i>	
L4.2	Sequential Decoding in Future Mobile Communications	1186
	<i>Orten P. and Svensson A., Chalmers University of Technology, Sweden</i>	
L4.3	Type-II Hybrid ARQ with Convolutional Codes over Block Fading Rayleigh Channels	1191
	<i>Malkamäki E., Nokia Research Center, Finland and Leib H., McGill University, Canada</i>	
L4.4	Multilevel Coding with Independent Decoding on Levels for Efficient Communication on Static and Interleaved Fading Channels	1196
	<i>Schramm P., Ericsson Eurolab Deutschland, Germany</i>	
L4.5	Performance of a Coded Slow Frequency Hopping M-ary FSK with Clamped Average Energy Metric in Overlay System	1201
	<i>Pouttu A., University of Oulu and Juntti J., Finnish Air Force Headquarters, Finland</i>	
L4.6	Low-Rate Multi-Dimensional Space-Time Codes for Both Slow and Rapid Fading Channels	1206
	<i>Tarokh V., Naguib A., Seshadri N., Calderband A. R., AT&T Labs-Research, USA</i>	

L5 Wireless LANs

L5.1	Design of Wideband Wireless LANs Through Performance Charts	1211
	<i>Ruggieri M., University of Roma, Italy</i>	
L5.2	HIPERLAN System Performance under DCA and FCA	1216
	<i>Jones B.C. and Skellern D.J., Macquarie University, Australia</i>	
L5.3	Microwave Oven Interference on Wireless LANs Operating in the 2.4 GHz ISM Band	1221
	<i>Kamerman A. and Erkocevic N., Lucent Technologies - WCND, The Netherlands</i>	
L5.4	A Novel Technique for Quantitative Performance Evaluation of Wireless Local Area Networks	1228
	<i>Bing B. and Subramanian R., Nanyang Technological University, Singapore</i>
