

“One thing we love about the Crown Jewel is the mounting poles extend above the crown deck along the hand-rails so they re easily customizable and do not require direct welds to the rig.

The pole mounted design is a game changer, prior designs were heavy frame-based designs or those lights that had to be welded to the crown deck. C-MOR’s design is beautiful given its light weight and extendibility above the crown deck, allowing the attached lights to extend beyond the handrails and even turned inward during rig moves.

The pole mounted brackets provide significant advantages over current site lighting as several of these pole mounted lights can be placed along different areas of the hand rails, extending from the crown deck, thereby covering those areas needed on a location with unbelievable site lighting.”
