How do I modify file date created?

Is there an easy way to modify file date created without outside software?

Thank
Robert

Hello Robert,

You can modify the date created by copying a file. The file's created date becomes the modified date and the current date (when the file is copied) becomes the created date. You can copy a file on your PC to check. Let us know if you need further assistance.

Hi Jelo.

Thanks for the quick reply.

Yes that would work, but I want to change it to a specific date.

Is there any command like the touch -d command in Linux?

Robert

We appreciate your response. The easiest way for you to modify the files to a specific date is by using a 3rd party application that you can search in Windows Store. Or you can also post a feedback about your query using the [Feedback Hub](#), which is readily available in Windows 10.

Regards.

Robert,

I use the third party utility [SKTimeStamp - Stefan's Tools](#) and it works very well for what you want. It adds a tab to the file's Properties so it is easy to use

- where you can see the existing entries below you can just overwrite them with the dates-times that you want.

RO

You could use the built-in capabilities of Powershell to do this job but you would have to work out a user interface to suit your needs. SKTimeStamp covers that already.

Denis

Is this compatable with Windows 10? I downloaded the latest and I do not get the TimeStamps column.

Robert

Isn't there a simple touch command like we had in the old days of Windows past?
