UPDATE #25

# BRAGI UPDATE - The App preview, The Charger, the SDK, BRAGI Funding and Chinese New Year and

BRAGI LLC. **Creator**

February 11, 2015

Dear Backer,

exciting times as delivery and finalisation of the Dash is moving closer.

## **Bragi APP preview**

Martin from the UX team prepared a early demonstrator of the app.

You will be able to try a clickable demo, that we made early January. You will need to install an app from Pixate to view the basic demo on your smartphone. Looking forward to your response.

Open the link on your smartphone, install Pixate and check it out.

[pixt.io/pf6fe615223bb](http://pixt.io/pf6fe615223bb)

This is a sneak preview on work in progress. No normal company would ever release anything like this, but we think that you will appreciate being involved in the process. Transitions, fields and UI will change. Macro creation is basic, but you'll get the point. The data visualisation is not complete. We have obviously been developing the apps for quite a while, and the framework is improving. Pixate is a fast way of visualising the basic experience.

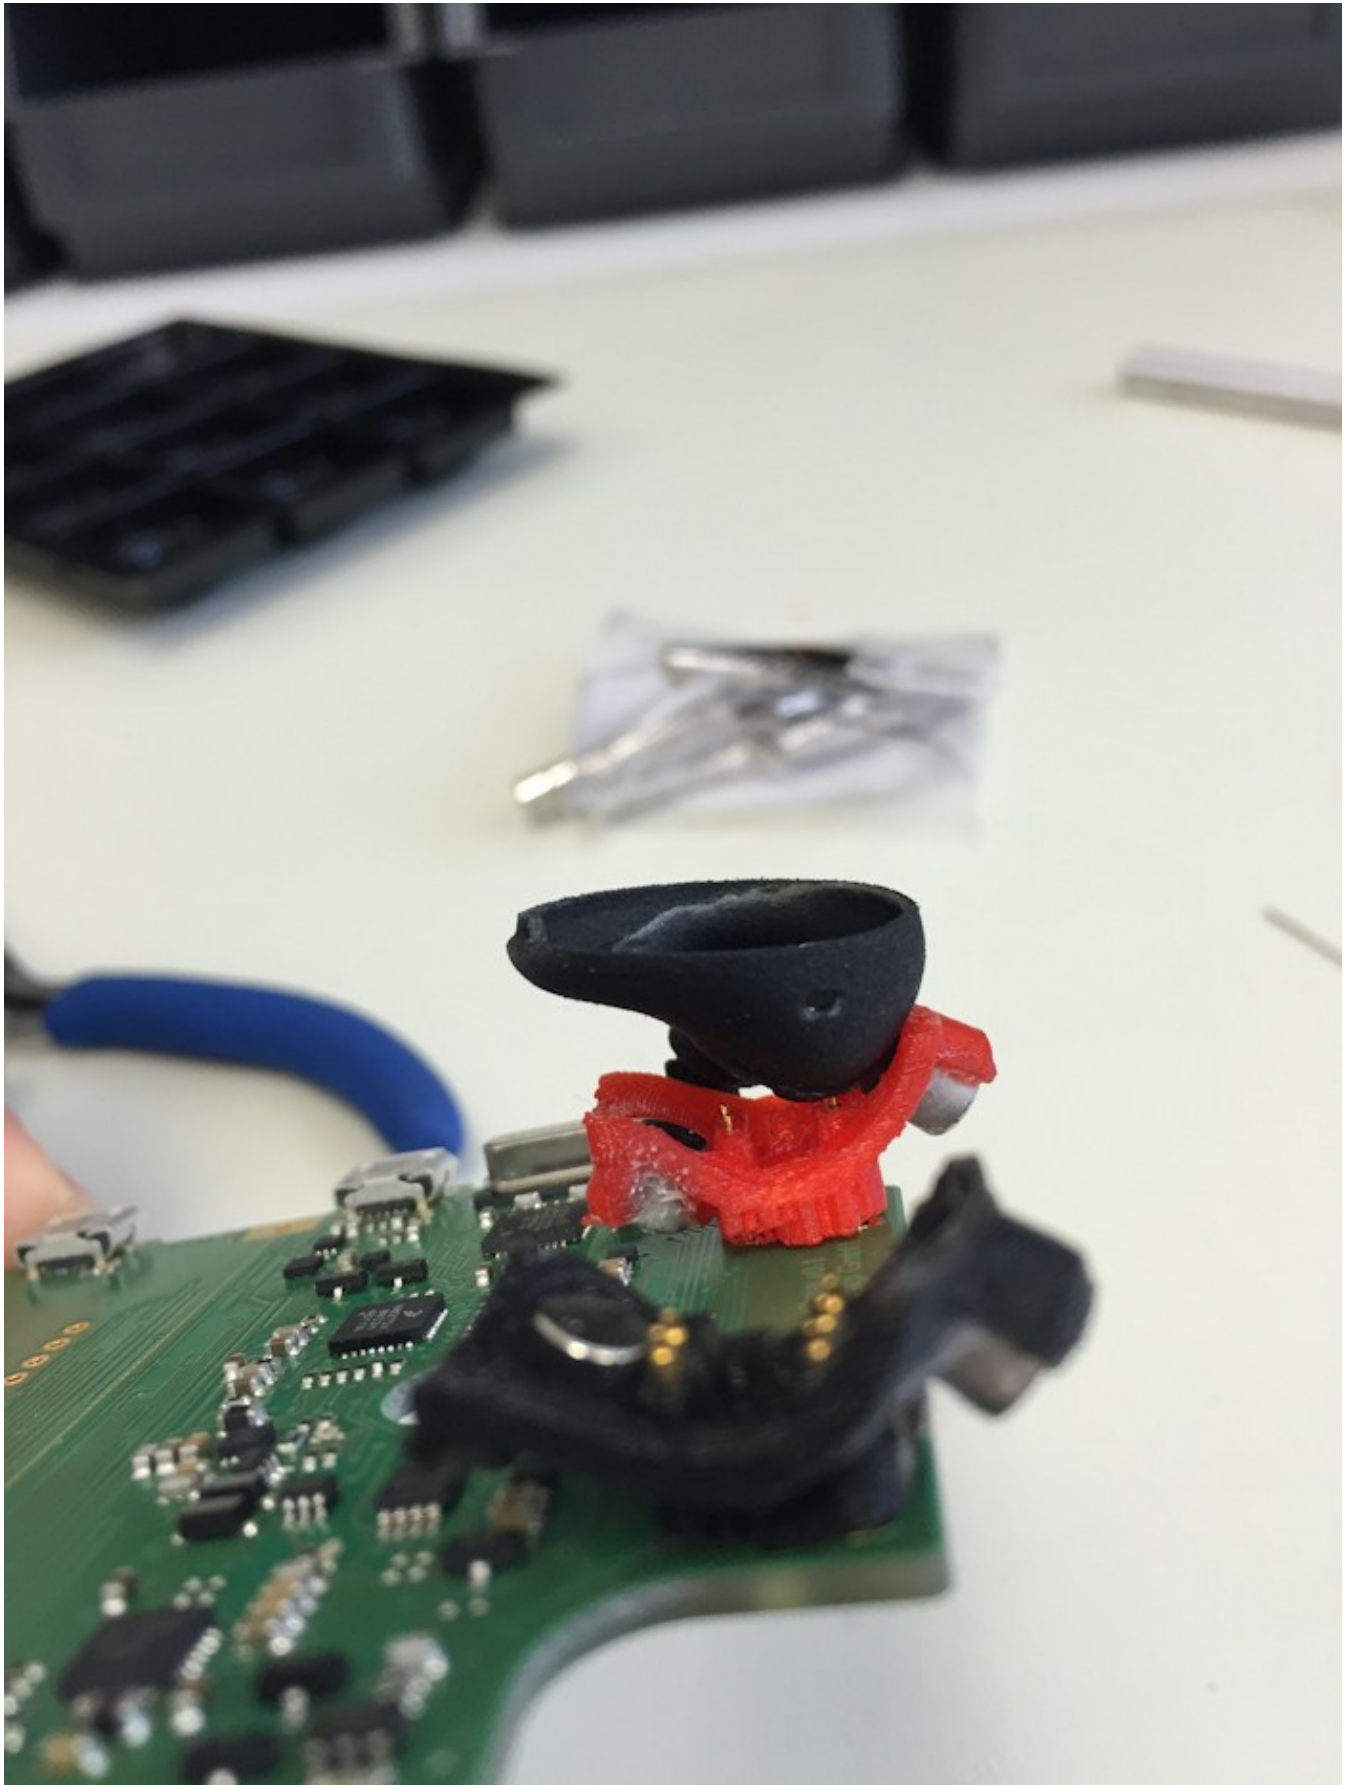

## The Charger

When we received the mechanical parts, we continued the electro-mechanical integration between The Dash and The Charger.

*Pads enabling charging of The Dash*

The pads need to connect with spring loaded pins (pogo pins) on The Charger, and needs to do so reliably. The concept was, that neodymium magnets on the charger side would pull The Dash into the charging cradle. Each pogo pin needs be applied 70g of pressure to ensure safe connection. With 5 pins, that amounts to 350g of pressure. So the magnets were calculated to apply 500g of pressure.

*Charger electronics development board. Pogo pins are the gold plated pins.*

When we did our first rapid prototyping with the parts received, we saw that the pogo pins (gold plated pins) needed much more force resulting in no or bad connections.

We have come up with a modified magnetic and pogo pin solution that we need to implement with our suppliers. Dan is currently in China to speed that process up.

## Software Development Kit (SDK)

Toby and his software team is preparing the first SDK release. It will consist of tools and guidance. We are finalising the development website, where developers can exchange ideas, knowledge and interact with our developers. Toby has a nasty cold, so please excuse the lack of enthusiasm :-)

## BRAGI has received additional funding

Creating a company capable of delivering The Dash is a very exciting challenge. Within a very short timeframe, we are not just building a product, but more importantly building a company with the capability of transforming ideas to delightful experiences for our customers.

Building a company requires financial support, and I'm very happy to announce, that we have completed our finance round. On the 29th of January a group of great people signed an investment agreement with BRAGI. The investment enables BRAGI to achieve our goals from a financial point of view.

If we had failed securing additional funds, I would have been forced to let go of a significant part of our team. Needless to say, the pressure on all of us has been huge. I wish to thank my team in public for their commitment and standing by BRAGI even when the outlook was challenging.

## **Chinese New Year**

Chinese New Year is a huge thing, but it also means that all production is closing down in China for a week. As mentioned in our last update, we needed to improve the layout of the electronics as well as enhance the wireless performance of the left Dash. The process of receiving new printed circuit boards takes about 3-4 weeks, due to the complexity and size of our electronics. We should have received the new electronics tomorrow. Dan is as mentioned in China to ensure delivery of electronics, but it seems that the delivery has been delayed until after Chinese New Year. That sucks! We were eager to continue wireless performance testing. Dan is returning on Friday, and we have not lost all hope, that he will have some of the parts with him when he returns.

We did receive the first out of tool (still needs modifications) of The Leash and The White Dash. The white saturation of the white dash is not yet where it should be.

*The White Dash and The Leash*

## Timeline

Until we have definite confirmation that our electronics has been delayed, the timeline remains as communicated at last update:

|                      |                             |
|----------------------|-----------------------------|
| Development backers  | early March 2015            |
| October shipments in | late March early April 2015 |
| November shipments   | 2nd half April 2015         |
| January shipments in | May 2015                    |

Pre-Orders from our website in May 2015

Thank you for your support,

BRAGI team and Nikolaj

## Comments

Only backers can post comments. **Log in**

Mia Alexiou

almost 9 years ago

The app looks gorgeous. Looking forward to getting the dash this year. Worth the wait :)

Isaac Bergman

almost 9 years ago

FYI all owners of jailbroken iOS devices can finally play with the app demo as Pixate as removed the jailbreak detection code from their latest version.

Frank Navarro Alonso

almost 9 years ago

First of all thank you for answering all our questions and comments. I have been traveling in the last days and I would like to know if we will be able to use the dash during fly and how all the sensors and capabilities will work in this conditions. May be you have already answer to this questions before but as far as I know there is any possibility here in the kickstarter side to search for an specific term under the comments. An improvement tipp for Kickstarter :)

**John Tan**

almost 9 years ago

Will it work with iOS 8 Healthkit at launch? Getting Healthkit to recognise the Dash app as a source will be immensely useful.

**Ok64**

almost 9 years ago

Fantastic work! I am very much hoping I can create a Macro to activate Cortana on my Windows phone to ask her a question eg "remind me to get some juice when I leave work" Or "send text to xxx".

**BRAGI LLC.** Creator

almost 9 years ago

Tasker is indeed cool. Post launch maybe.

**Miro**

almost 9 years ago

You guys rock! Great technology, frequent updates, can't wait and tbh don't mind delays.

**Bernard Cooper** Superbacker

almost 9 years ago

Beautiful looking UI. As an Android user I do get a little jealous of the polished interfaces most IOS apps have. I hope the premium look and feel of this mock-up is carried over to all the OSes.

**Stephen Speicher**

almost 9 years ago

Sorry, I wasn't clear. I didn't think that you were trying to replace others with your app.

I simply wanted to make sure that, in addition to passively releasing the SDK, you were also ACTIVELY working with Strava, Wahoo, Runkeeper, etc. without adoption from these guys, the potential is somewhat lost.

Robbie L

almost 9 years ago

@Mark, Etienne is correct.

I believe they couldn't add Active Noise Cancellation because of licensing and other issues. If I remember correctly they said the way the dash fits passively blocks out a decent amount of noise as is.

Robbie L

almost 9 years ago

Definitely agree, would LOVE to see support added for Tasker. This could bring so much more functionality into play.

Etienne Vandamme

almost 9 years ago

@Mark

There is a bone microphone

Mark Relling

almost 9 years ago

For version 2.0 of The Dash, could you investigate the possibility of squeezing in a microphone please? (Maybe using bone conduction of the sound).

That way I could talk to Microsoft's Cortana via my Windows Phone (Nokia Lumia 930).

Apparently it is the best out of Cortana, Siri, and Google Now!

Michael Keller

almost 9 years ago

@Bragi: I know it is just a first presentation of the general layout of the app, so the list of possible reactions for the Macros is probably also far from complete. I still would like to suggest the possibility to trigger a Tasker macro, which would instantaneously multiply the possibilities. That way, more complex macros would become possible, for example triggering different actions with the same movement depending on GPS location or just accept the call if a person from a selected list of people is calling (I don't want everybody

to disturb me while I'm running :D). If also the data gathered by The Dash (like heart rate, oxygen saturation, ...) could be passed to Tasker, the macros could also be made dependent on this, for example starting music, but for high heart rates use a playlist with music that will rather calm you down.

I know that Tasker is not the easiest app to use but this would allow some intermediate level of customization, right in between of just using The Dash and getting the full SDK and develop your own software for it. Tasker macros could also be shared via some forum with other people.

So excited about the possibilities :)

BRAGI LLC. Creator

almost 9 years ago

@John, we'll have some screenshots of the WP app in our next update.

BRAGI LLC. Creator

almost 9 years ago

@Stephen, The Dash App is definately NOT intended as a replacement of Strava. The App is intended to provide a basic feedback.

The purpose of The Dash app is to control and enhance the experience of the dash.

V

almost 9 years ago

Providing an app mock up was a great idea! The look of the app is great. I'm looking forward to utilizing the 'Add Macro' functionality. I think this will add a level of personalization that is unmatched. Points that could be improved: once within the activity pages it isn't readily apparent on how to navigate back. I assumed it would be a swipe down instead of tapping on the current activity. Macros is misspelled in the bottom message as well. I did expect to see some type of music control/interface as the dash is supposed to have storage built in for this purpose. Also, swiping to change activities on the homepage is a bit sticky. I do love the color scheme and the modern look of the icons. I might switch the visuals and the weather/message areas around at least in size (make graphs larger than weather/location). That seems to be the primary purpose rather than displaying the weather. All around good looking app though. Thanks for sharing and allowing us to contribute!

Stephen Speicher

almost 9 years ago

Bragi, please tell me that you've sent the good people at Strava both the SDK information and sample units. I am INCREDIBLY excited about my dashes, but a bit of me is concerned that i will soon have yet another app to collect \*some\* of the data.

Strava seems like the natural choice as they are purely software and aren't like Garmin, Nike, etc. putting out software to support their own hardware.

That said... for bonus points I would be over the moon if I could use this with my Wahoo KICKR.

Can't wait to get these puppies!

John Archer

almost 9 years ago

Regarding the Windows Phone app: Maybe you can publish some screenshots for us, so at least we can have these to see how the interface looks like?

Stephen Weil

almost 9 years ago

What fun to have an opportunity to okay with the app in pre-production stage. Very comprehensive...maybe a bit complex and somewhat redundant on all the individual activity settings. But obviously a lot of deep thought is going to the technology and the experience. As we day in Boston, "Wicked pissa." In other words, Great job. Carry on.

Sophia Tung

almost 9 years ago

Just a heads up to anybody who is getting the Pixate app crash, the app will crash on jailbroken devices. Pixate claims this is due to "security."

Matt Green

almost 9 years ago

What are the chances of teaming up with Google Translate and providing on the fly voice translation services via the Dash?

Felix Heberle

almost 9 years ago

Cool first look at the app! Excited!!!

Felix Heberle

almost 9 years ago

@all: First download the App in the store. Then go back to the comment and click on the link in the text. Wait! You will be redirected! Have fun!

ramboky

almost 9 years ago

It's great to see progress but given how much is still to be done I'm a little sceptical you'll be able to meet your march timeline. That said, please don't let the pressures of slipping deadlines affect the quality of the product. A great product delivered extremely late will very quickly make your backers forget about the delays. A flawed product delivered moderately late will leave a backers doubly disappointed.

BRAGI LLC. Creator

almost 9 years ago

@Cheng-ting Don't worry, we will send a double-check survey shortly before shipping in which you will be able to confirm or change your address. We are responsible for the delay, so we will cover your extra costs for shipping.

Etienne Vandamme

almost 9 years ago

@stephen

Please take time to read the comments, at least those by bragi. It is explained, once you have app, click on the link again.

Stephen Frost

almost 9 years ago

The link takes me to the Apple App Store and installs Pixate, but then I am presented with a logon screen that asks me for an email and password?

Sophia Tung

almost 9 years ago

Seeing as the prototype preview doesn't work for a lot of people, is it possible for you guys to post some kind of video or screenshot preview for us?

Jared Sturman

almost 9 years ago

When using the dash, will there be audio lag when watching video? I have the powerbeats 2 and when watching video there is a considerable amount of lag between the audio and video.

Bengt Sondh

almost 9 years ago

Nice app

Steven McMahon

almost 9 years ago

I'm excited that the dash is almost ready! It's been a long process but as with the pebble it will be a first of its kind. Nobody else has this cool a set of Bluetooth headphones. And the extra things that it does are icing on the cake. I have probably a dozen different sets of Bluetooth headphones and earbuds but I'm very much looking forward to being able to put one piece in each ear and have nothing tying them together. Very exciting.

Cheng-ting Chang

almost 9 years ago

Hi Bragi team, thanks for this exciting product, I can't wait for the shipment! However, I got a small problem, and that is I literally can't wait for the shipment. According to your original timeline, I supposed to be in the U.S. when it ships, so I put an U.S. address in it. Now you'll delay a little bit (which is totally fine with me,) so I'll be back to Taiwan after February. Is it OK to change the address when you send out the confirmation, 'cause I didn't include the shipping fee in it?

mark distefano  
almost 9 years ago

Very impressive in what it can do. Can't wait to get my ears on them!!!

Noah Wisnia  
almost 9 years ago

I've tried the locate link a few times on my iPhone 6 plus running iOS 8.1.2 and the app loads a white screen, quickly fades to black, and then closes back to the home screen. Help! I'd really like to see the app mockup.

BRAGI LLC. Creator  
almost 9 years ago

@Martin Scher, the dash will not be capable of ANT+. It will though be capable of sending HR data over BT LE.

Michael Scher  
almost 9 years ago

I am happy to see there is a cycling page in the app. How exactly will that function and what will it offer? Will the Dash be able to communicate with cycling computers such as Garmin Edge, either via ANT+ or Bluetooth, to transmit data such as heartrate?

BRAGI LLC. Creator  
almost 9 years ago

@Renrid, the pixate app is just to demonstrate the concept. The app is programmed natively, and no login or such will be required.

Renrid  
almost 9 years ago

Looks nice but i hope the final app won't need the same amount of permissions like pixate does

**FrankyB**

almost 9 years ago

Again, thanks for the update and looking forward for more information about the SDK.

FYI: The app preview doesn't work on Windows Phone

**Clemens Eherer**

almost 9 years ago

Hmm any tips to get it working on a Galaxy S4?

Eaven tried to clear cach and cookies, restart...

and the help further down

James Hiscott about 2 hours ago

Anyone struggling with the app, follow the steps below:

- 1) install the Pixate app
- 2) Once installed, dont even open the app (if you have, close it)
- 3) go to the bragi kickstarter page on your phones browser
- 4) find this update and click the link given: [pixt.io/pf6fe615223bb](http://pixt.io/pf6fe615223bb)
- 5) wait for it to load the assets (which sometimes doesn't work, if it doesn't, close the app again, go back to the browser on the phone and click the link again)

You dont need to sign up for any Pixate accounts or anything in the app its self.

**Ben Rooney**

almost 9 years ago

The app looks good so far from what we can see and use in the sub menus. I'm curious to know if there will be gesture or voice commands for controlling music function like switching songs, volume up/down and pause/play? I wonder because I plan on using these under a motorcycle helmet for gps directions and music when on the track. It would also be really cool if the app had a built in 2 way radio feature so that I could talk to other riders were using the headphones as well. I could see this useful for cyclists riding in a group as well. You could add a single person or group of people to the 2 way radio channel so everyone could hear the turn by turn directions or the conversation. An additional feature that would be useful for auto or motorcycle track event use is to set a gps waypoint as the

start/finish line marker so you could track # of laps and lap times automatically when you pass that point each lap. If the headsets God could record In it's memory the gps route you could then download that and have a telemetry recorder. Voice notifications could alert you of faster or slower lap times on each lap as well.

I'm really excited to get these and hopefully use them for some of the ideas I mentioned since it seems like the perfect tool for accomplishing this on top of everything else it can do! Keep up the good work and feel free to contact me if you actually work on incorporating some of the features I mentioned. I'd love to provide more feedback/help if I can.

BRAGI LLC. Creator

almost 9 years ago

@Michael Keller, thx.

BRAGI LLC. Creator

almost 9 years ago

@Arshdeep Viridi, we need to coordinate suppliers from US, Europe and various Chinese suppliers. Pending on the vendor, some chinese companies keep some staff on site to help us out. We were supposed to receive the pcb today, so we can populate tomorrow. We do not yet have feedback from our guy in China, if that actually happened.

BRAGI LLC. Creator

almost 9 years ago

@Arshdeep Viridi. The windows phone app is intended to be released, when we ship product. Microsoft is providing direct support and guidance, and we are very happy concerning the relationship.

BRAGI LLC. Creator

almost 9 years ago

@ttan, we will not send out a press release on the funding. We received money and are happy about it. The investors would like to remain anonymous.

Mark Howard

almost 9 years ago

Massive kudos to you all!

We all appreciate the extra efforts in keeping us updated at these critical stage.

Chinese New Year Year- Its is kickstarters achilles heel.

Last year it caused untold problems and I expect this year wont be different!

Really hope with your guy on the ground over there he can get everything back on track asap!

BRAGI LLC. Creator

almost 9 years ago

@Paddy keane, thx for feedback. Pixate just scales with higher resolution. Was made for iphone 5s for demo purposes.

BRAGI LLC. Creator

almost 9 years ago

@Kristjan, we will integrate with other apps too. Initially we will support running, biking and swimming. Future firmware upgrades would add other activities.

Michael Keller

almost 9 years ago

Unfortunately the app preview does not work on my phone. Still nice to see the work and progress on all ends trying to finalize a great product. And congratulations on securing the additional funding. I guess, none of the backers would have doubted that there are people willing to invest in such a great team :)

Arshdeep Virdi

almost 9 years ago

Just want to mention one more thing, I love this project and I am glad that I backed it. Also I love the way you guys provide updates and that you are really working hard.

By looking at the prototype and your progress with the apps and considering Chinese new year I do not expect you to deliver October shipments before end of May or early June and I have no problem with that. All I want is a quality product with everything ready (apps - including Windows Phone app with exactly the same features Android and iOS app) at the launch time.

Shrkkzar

almost 9 years ago

@ Bragi

By the way, is there a possibility to add a parallax-effect to the background pix within the app?

I do not know if it would be functional, but it would sure look cool.

Arshdeep Virdi

almost 9 years ago

I have backed other projects on Kickstarter, those were also manufactures in China. I don't think Chinese new year would affect the production/work by a week. It usually affect the production/work by a month.

I do not expect to hear from you until next month then.. Just wanted to be clear on that :)

Shrkkzar

almost 9 years ago

@ Bragi

"No normal company would ever ...". This.

This is exactly the spirit that makes so much fun while watching you develop the product.

Thx for sharing.

Love your work and dedication.

Arshdeep Virdi

almost 9 years ago

I would like to see the Windows Phone App, where is it? I do not want to see the Windows Phone App coming months later after the official launch of Dash.

The only thing I feared about before backing up for this project was will you guys be able to provide a Windows Phone App that is as powerful as the app for other platforms. Now I really doubt it.. Please do not disappoint me, without an app (with similar features as other OS) Dash is relatively useless on Windows Phone.

Also I guess the final product would be made from superior material with nice finish, edges and would not look like the prototype you have shown in the images above, after all I have spend almost what it takes to buy a Premium Beats Wireless Headphones.

Ulysses Maccaud

almost 9 years ago

I like the app so far, the look is fresh and simple. It looks really great !!! I cannot wait to get it.

Etienne Vandamme

almost 9 years ago

project Ara involved a large group of tester which I was part from at the beginning. They used an app similar to this to preview stuff, but also to let people vote on functions and stuff. It was very time demanding so I quit, but it's an interesting approach.

paddy keane

almost 9 years ago

Many thanks for sharing. Small personal design points, Think I'd prefer the switch controls to look more like Apple standard switches and be more rounded (helps with iOS platform consistency too). Like the top area background change when selecting different activities but images look quite pixelated and muddy (iPhone 6+). Either a cleaner, vector gradient or a bit more work on them might lift it a little? Great work, best of luck!

Kristjan Ulfsson

almost 9 years ago

I see you have a few activities and then Idle in the app. What about recognizing exercises like ab crunches, Push-ups, Jumping Jacks etc. i.e. where you can recognize the head movement. Additionally I am wondering about your plans for integration with other platforms such as MyFitnessPal et. al. ?

Otherwise this looks great and I am looking forward to seeing what can be done with the Dash.

Karl Gilbert

almost 9 years ago

Can't wait to see how beautiful you make the Windows Phone app (a Universal app I hope)!

Achim

almost 9 years ago

I hope the Windows Phone App will be ready at Launch as well. Any news on that?

BRAGI LLC. Creator

almost 9 years ago

@Tony, thx

BRAGI LLC. Creator

almost 9 years ago

@Kim Chong Ka, this is a preliminary preview. Very untypical of companies, but we like to involve you.

BRAGI LLC. Creator

almost 9 years ago

@James, thx for the guide

BRAGI LLC. Creator

almost 9 years ago

@ttan, we are tight on timelines. That is why we are working like crazy.

Patin Yann

almost 9 years ago

Congratulations on at the Bold Initiative to present a preview of the application dedicated to The Dash. very interesting to taste the spirit with which you are implementing the functions and services derived. although the interface is based on the user experience of iOS, Android users can also enjoy the content and interactions possible. I wish the whole team better can continue for subsequent stages of development.

Etienne Vandamme

almost 9 years ago

apps looks great, I think the "tap" to scroll between activities is not optimal though, it should either be all activities visible or a scrollable list.

hyperex

almost 9 years ago

The app looks promising! Is the design final already?

I was hoping to see a section in the app that allows us to see just the body vital measures.

Seems like the app is categorize by activity only - Idle, Workout, Swim, etc.

Nisarg Malde

almost 9 years ago

@Bragi

Fair enough. Can't wait for y'all to nail this! :D

Good luck!

James Hiscott

almost 9 years ago

In other news, the app looks cool is it possible to add (if not already) under the macro options.

When SMS received

Read outloud

James Hiscott

almost 9 years ago

Anyone struggling with the app, follow the steps below:

- 1) install the Pixate app
- 2) Once installed, dont even open the app (if you have, close it)
- 3) go to the bragi kickstarter page on your phones browser

4) find this update and click the link given: [pixt.io/pf6fe615223bb](http://pixt.io/pf6fe615223bb)

5) wait for it to load the assets (which sometimes doesn't work, if it doesn't, close the app again, go back to the browser on the phone and click the link again)

You don't need to sign up for any Pixate accounts or anything in the app itself.

BRAGI LLC. Creator

almost 9 years ago

@Nisarg, we kick off tooling, when we have the right solution. Will try to get some renderings of final appearance, when we have nailed the solution.

Nisarg Malde

almost 9 years ago

@Bragi

Was awesome trying out the app on pixate. Looks really neat. The leash looks good too! Hope there are no more delays. About the case, do you think that can affect the timeline? And can we get a few pictures in the next update?

BRAGI LLC. Creator

almost 9 years ago

@Scide, Skiing is planned for fall 2015 release.

Scide

almost 9 years ago

Your demo app looks gorgeous, guys! :) Can't wait to get the Dash.

Can you please add a mode for Skiing to the app? Would be great!

Tim Ferguson

almost 9 years ago

I've been unable to figure out how to get the prototype into the Pixate app on Android. Installed the app. Signed up for a Pixate account on the website. Logged in. Clicked the link in the email. Firefox couldn't find an app for the intent:// and Chrome just wanted to launch the Play Store searching for "intent". Rebooting the phone made no difference. Might just

be due to overwhelming demand though... But not the best UX for a prototype tool. As a UX / UI guy I know that it reflects more on Pixate than Bragi. But I suspect others won't have that insider knowledge. Looking forward to checking it out!

BRAGI LLC. Creator

almost 9 years ago

@Garvin, thx, we are still improving, but wanted to show a basic snapshot from early January.

Garvin Hicking

almost 9 years ago

I was afraid to check out the app, fearing it might not be what I aspired it to be. I jumped my preconceived fears and ran the app. Looks very solid to me, just what I had hope it to be. It's hard to make suggestions without the hardware (... ;) ) but I'm relieved this is a promising step. Great work, thanks to the whole team.

David Fleischmann Superbacker

almost 9 years ago

No windows phone demo :(

P.S. I saw the reply below but felt I should register my :( v.excited for the final product though :D

BRAGI LLC. Creator

almost 9 years ago

@Vitor. Install the pixate app. Exit it. Press the link in your browser, and the assets load.

Vítor Clemon

almost 9 years ago

Pixate app is asking email and password. Is it about my KS account?

BRAGI LLC. Creator

almost 9 years ago

@Kile Kniffen, no pwd or username is required.

BRAGI LLC. Creator

almost 9 years ago

@Robin, thx for the feedback!

Kile Kniffen

almost 9 years ago

How do I demo the app? How do I get a login Id and password to demo the app?

Robin

almost 9 years ago

hey, the app looks really cool but still some kind of instable, but thats probably cause of the thing that it's a prototyoe and the app pixate that sourrounds it. What was disturbing me, was that when I scroll down the top menu and I want to scroll it back up I need to swipe in the head area and am not able to swipe when touching the menu points... Also I can't swipe down the details menu of the bottom buttons like Idle, Running, etc. I think, if I can swipe down something, I should be able to swipe it up again and vice versa. But thats all. Good job guys. Still totally excited for the shipping!

BRAGI LLC. Creator

almost 9 years ago

@YT, we would have loved to enable Kickstarter backers to invest in this round. Due to german legislation it is difficult for us to do. We investigated it, and it would have been difficult.

John Archer

almost 9 years ago

@Bragi: Ok, thanks for your answer. So there is hope ... :-)

BTW: I \_love\_ the fact, that the UI on WP is different. One of the reasons I love WP, I really like their UI.

YT

almost 9 years ago

I'm sure you will have no problem receiving fundings, as Dash is a fantastic and--may I say--ground-breaking product. Speaking of funding, since we as the backers have help make this project possible in the first place by backing it, is it possible for us to also participate as investors? This is how much we believe in the product and the team!

Michiel

almost 9 years ago

It must be hard, hard work. But oh so rewarding to see your company progress so steadily, Nikolaj. I'm a business developer myself and I can only admire and smile when I read these updates and see the well-timed, controlled steps forward. Ace.

BRAGI LLC. Creator

almost 9 years ago

@Gianluca, some of the fields are place holders. If we in worst case have to add fields.

Pat M. Superbacker

almost 9 years ago

Great work guys. The app looks awesome.

Gianluca Giorgini

almost 9 years ago

The App looks great! That being said, do you really need to ask for the step length?? You've got a bunch of sensors to deal with including those from the smartphone and a boatload of data to analyse for an estimate! regards

BRAGI LLC. Creator

almost 9 years ago

@John Archer, sorry for the lack of demo on WP. The UI of windows phone is different, due to requirements from Microsoft. We'll try to make a windows demo soon.

Romuz Miah

almost 9 years ago

The app looks fantastic guys! I can't wait to get the earphones and start playing with it! I now get frustrated everytime I pull out my wired earphones but then excited knowing that this will come in a few months!

John Archer

almost 9 years ago

Great, no support for us Windows Phone users ... :-( Any chance we can get the demo, too?

Glenn

almost 9 years ago

I hope this lives up to expectations

It tried it a few times. It seems like there are too many trying to access the demo. Try reloading a few times, until all assets load.

The demo App isn't working on my iPhone 6.

The pixate app keeps crashing all the time

**Frederic Biermann**

Indeed exciting times, congratulations in getting a funding.

Cheers
