I. INTRODUCTION

The Board should deny Petitioner's Motion to Submit Supplemental Information (Paper 16) ("Motion" or "Mot.") for two reasons. First, by its own terms, the Motion's supplemental information—a supplemental Dr. Lansford declaration (INTEL-1047), a prior art inventor's deposition transcript (INTEL-1048), and an Internet Archive declaration with Wayback Machine printouts (INTEL-1049)¹— is an attempt to patch holes in the Petition and is thus an improper application of 37 C.F.R. § 42.123(a). As the Board already held, Petitioner "anticipated the issue" of public availability by filing "a lengthy declaration including a number of evidentiary appendices (1124 pages long)," and the "proposed new evidence ... *could have and should have been included in the Petition*[]" Paper 7 at 4.² Petitioner offers no reason for Board to reverse course now.

Second, even ignoring that the Board has already ruled on this issue, portions of Petitioner's supplemental information have no relevance to the alleged

¹ Patent Owner specifically objects to INTEL-1049's Appendices A-D and the corresponding paragraphs 38, 23, 30, 32.

² All emphasis added and internal quotations and citations omitted unless noted.

availability of the July 2005 WWiSE reference, and thus fail to meet the requirements of 37 C.F.R. § 42.123(a). The Board should deny the Motion.

II. ARGUMENT

A. Petitioner's Supplemental Information Improperly Seeks to Respond to the POPR and the Institution Decision

Petitioner improperly attempts to use the supplemental information procedure to refine and bolster its arguments in response to the Patent Owner Preliminary Response ("POPR") and the Institution Decision ("ID"). *See Hunter's Mfg. Co., Inc. v. Ravin Crossbows, LLC*, IPR2023-00407, Paper 32 at 3 (PTAB Feb. 15, 2024). That is not what the supplemental information procedure is for and the Board did not invite otherwise.

A motion to submit supplemental information is not automatically granted even if 37 C.F.R. § 42.123(a)'s timeliness and relevancy requirements are satisfied. *Redline Detection, LLC v. Star Envirotech, Inc.*, 811 F.3d 435, 444–45 (Fed. Cir. 2015). Instead, the Board evaluates motions under § 42.123(a) "within the overarching context of the PTAB's regulations governing IPR and general trial proceedings." *Id.* at 446. This includes the requirement that "the initial petition identify 'with particularity' the 'evidence that supports the grounds for the challenge to each claim.'" *Hunter's Mfg. Co., Inc.*, IPR2023-00407, Paper 32 at 3 (quoting *Intelligent Bio-Sys., Inc. v. Illumina Cambridge Ltd.*, 821 F.3d 1359, 1369 (Fed. Cir. 2016) (quoting 35 U.S.C. § 312(a)(3))).

Where a petitioner “seeks to provide arguments via the supplemental [information] for issues addressed by Patent Owner in its Preliminary Response or by [the Board] in the Decision on Institution,” the Board “view[s] [the supplemental information] as unwarranted.” *Triller, Inc. v. TikTok Pte. Ltd.*, IPR2022-00180, Paper at 18, 3–4 (PTAB Aug. 25, 2022). That is because “[s]upplemental information is not intended to provide a petitioner an advantageous ‘wait-and-see’ opportunity to use a patent owner’s preliminary response and [the Board’s] decision on institution in order to refine or bolster petitioner’s position.” *Ooma, Inc. v. Deep Green Wireless LLC*, IPR2017-01541, Paper 14 at 3–4 (PTAB Jan. 23, 2018); *Mianyang Boe Optoelectronics Tech. Co. Ltd. V. Samsung Display Co., Ltd.*, IPR2023-00941, Paper 27 at 3–4 (PTAB Feb. 15, 2024) (citing various cases).

Here, Petitioner admittedly seeks to use the supplemental information procedure as an opportunity to “bolster” and “address” issues discussed in the Board’s Institution Decision:

- “Intel provides three proposed exhibits that buttress ***the Board’s*** conclusion and address the issue it raised.” (Mot. at 4–5 (citing ID at 9, 11));
- “***The Board*** suggested that the parties consider whether the list of WWiSE contributors supports public availability. *Id.* Intel seeks to submit supplemental evidence relating to that issue

based on the rule in 37 C.F.R. § 42.123(a).” (Mot. at 9-10 (citing ID at 9));

- “This information speaks directly to an issue *the Board* invited the parties to address. Paper 10 at 9. It also bolsters *the Board’s* decision....” (Mot. at 6 (citing ID at 9));
- “Intel’s supplemental information is relevant to this IPR. First, it reinforces *the Board’s* conclusion that WWiSE was publicly available” (Mot. at 1 (citing ID at 6–18));
- “Second, the proposed exhibits link WWiSE’s contributors to the reference’s public availability—an issue *the Board* suggested that the parties explore.” (*Id.* at 1 (citing ID at 9));
- “The *institution decision* recognized that WWiSE . . . *The decision* then invited Intel and Patent Owner AX Wireless to address this information going forward” (*Id.* at 1 (citing ID at 9));
- “And like Dr. Lansford, Dr. Hansen explained that engineers paid attention to submissions to TGn during the 802.11 standardization process, which is relevant to the issue *the Board* invited the parties to address.” (*Id.* at 6–7).

Petitioner relies heavily on the Board’s statement that “[t]he parties may want to consider during trial” how dissemination of the July 2005 WWiSE proposal among its contributors compared to the insufficient dissemination in *Samsung Elecs. Co. v. Infobridge Pte. Ltd.*, 929 F.3d 1363, 1369 (Fed. Cir. 2019) as a basis for its supplemental information. *See, e.g.*, Mot. at 1, 4–5, 6-7, 9–10

(citing ID at 9). But “[s]tatements in the institution decision (e.g., [ID at 9]), to the effect that the parties should consider addressing certain issues during trial” are not an invitation for a “motion under 37 C.F.R. § 42.123.” *Hunter’s Mfg. Co., Inc.*, IPR2023-00407, Paper 32 at 10–11. Rather, “such statements . . . are directed to the normal briefing process and do not justify allowing supplemental information.” *Id.* This is especially true here, where the Board merely suggested comparing the alleged distribution of the July 2005 WWiSE proposal among its contributors—citing evidence already in the record (*see* ID at 9)—with a Federal Circuit case—i.e., a run-of-the-mill comparison for briefing.

Indeed, the Board already rejected Petitioner’s prior request to submit a supplemental Lansford Declaration on the public availability of the July 2005 WWiSE reference finding that the evidence “could have and should have been included in the Petition[.]” Paper 7 at 4. Specifically, the Board found that “Petitioner has already filed a lengthy declaration including a number of evidentiary appendices (1124 pages long)” and “anticipated the issue of whether this [WWiSE] reference qualifies as prior art.” *Id.* Petitioner thus had (and took) the opportunity to submit evidence in the Petition as to the availability of the July 2005 WWiSE reference making the supplemental Lansford declaration improper then. *Id.*

So too now. Although 37 C.F.R. § 42.123(a) does not require a movant show that the supplemental information could not have been obtained earlier, “[t]he Board may take into account . . . whether the supplemental information was reasonably available to the Petitioner at the time the Petition was filed.” *Merck Sharp & Dohme Corp. v. Microspherix LLC*, IPR2018-00393, Paper 21 at 4 (PTAB Sept. 10, 2018). It was here. The information in the Supplemental Lansford Declaration—how industry participants allegedly tracked draft 802.11 proposals for product development (INTEL-1047 ¶¶ 6-9), the composition of WWiSE and TGn Sync contributors (*id.* ¶ 10), and the functioning of the Mentor website at the relevant time period (*id.* ¶ 11)—was all available at the time of the Petition. So were the Internet Archive webpage printouts of previously submitted exhibits and the corresponding Internet Archive Declaration. INTEL-1049 Appendices A-D. And although Mr. Hansen’s deposition (INTEL-1048) did not occur until November 29, nothing precluded Petitioner from seeking an earlier deposition or declaration from Mr. Hansen. Petitioner knew he was an inventor on the primary prior art in the Petition and discovery in the underlying district court litigations had long been open. AXW-2040 and AXW-2041 at 4. Petitioner chose to wait until after the POPR was submitted to depose Mr. Hansen.

Moreover, Petitioner’s supplemental information does not “simply provide[] additional support that WWiSE was publicly available,” as argued by Petitioner.

Mot. at 2. In addition to patching holes in the Petition, as described above, it seeks to add new theories and support. A majority of the supplemental Lansford declaration (INTEL-1047) and a portion of the Hansen transcript (INTEL-1048) attest that those in the industry or engineers would have sought out proposals in the 802.11n task group for product development purposes. INTEL-1047 ¶¶ 6–9; INTEL-1048 at 22:2–25:21. But neither the Petition nor Dr. Lansford's Declaration include this public availability theory. As the POPR pointed out, Petitioner provided no reason as to why a POSA would have been aware of the July 2005 WWiSE proposal or why a general desire to combine proposals from WWiSE and TGn Sync would have led to a POSA plucking July 2005 WWiSE's ER header bits out of that proposal and dropping them into Hansen. POPR at 10. Even the Board questioned the sufficiency of Petitioner's evidence on this point. ID at 34. Petitioner's inclusion of this new theory now is a not-so-veiled attempt to use supplemental information to refine and bolster arguments in its Petition in view of the POPR and the Institution arguments.

Additionally, Petitioner uses both the supplemental Lansford declaration (INTEL-1047) and the Hansen transcript (INTEL-1048) to add arguments regarding the public availability of a January 2005 TGn Sync proposal (INTEL-1012) that are entirely absent from the Petition. INTEL-1047 ¶¶ 9–10; INTEL-1048 at 32:23–33:1. The POPR demonstrated that the Petition did not rely on the

January 2005 TGn Sync Proposal as part of any of its grounds. POPR at 20–21.

The Board refused to “rely upon Ex. 1012 for its teachings” because “Petitioner has not (1) shown that it is publicly available prior art, (2) listed it as a reference in the combination, or (3) shown that it is the document being relied upon in Hansen.” ID at 31 n.6. Petitioner should not be permitted to use supplemental information as a backdoor for new arguments on the public availability of the January 2005 TGn Sync Proposal. *See Microsoft Corp. v. Corel Software, LLC*, IPR2016-01083, Paper 14 at 13 n.5 (PTAB Dec. 1, 2016) (quoting 35 U.S.C. § 314(a)) (the petitioner must “provide a threshold showing” on the “fundamental element” of public availability “in the petition”).

Because Petitioner seeks to use the supplemental information procedure to refine or bolster the positions in the Petition, its motion should be denied. *See Am. Well Corp. v. Teladoc Health, Inc.*, IPR2021-00748, Paper 23 at 6–7 (PTAB Feb. 28, 2022) (citing cases).

B. Petitioner's Supplemental Evidence Is Not Relevant

Moreover, portions of Petitioner's supplemental information are not relevant to a claim for which trial has been instituted as required by 37 C.F.R.

§ 42.123(a)(2). Petitioner bears the burden to establish that the supplemental information is relevant. *See* 37 C.F.R. § 42.20; 37 C.F.R. § 42.123(a)(2). Here, Petitioner argues that its supplemental information “reinforces the Board's

conclusion that WWiSE was publicly available” and “link[s] WWiSE’s contributors to the reference’s public availability—an issue the Board suggested that the parties explore.” Mot. 1. Putting aside the impropriety of using supplemental information as an avenue to address issues raised in an Institution Decision (*see* Section II.A, *supra*), large swaths of Petitioner’s supplemental information are irrelevant to Petitioner’s cited issues.

For starters, portions of Petitioner’s supplemental information relate to the alleged availability of a **TGn Sync**—not WWiSE—proposal, which, as the Board recognized, is not part of the obviousness combination for any Ground. ID at 31 n.6. In his supplemental declaration, Dr. Lansford attests that “[i]n the 2005 time frame,” the “TGN Sync” proposal was “publicly available from the IEEE website” and “widely discussed in wireless networking industry circles.” INTEL-1047 ¶ 9. He also discusses the authors and contributors of the “January 2005 TGn Sync proposal ... Exhibit 1012.” INTEL-1047 ¶ 10. Similarly, Mr. Hansen’s deposition transcript includes testimony regarding the “TGnSync proposal,” including its submission process (INTEL-1048, 32:23–33:1), whether engineers would be reviewing the proposal (*id.*, 24:23–25:5), and expectations that the proposal would be incorporated into the 802.11n standard (*id.*, 25:7–21). Supplemental information on the alleged public availability of a TGn Sync proposal has no

relevance to the public availability of the July 2005 WWiSE proposal as alleged by Petitioner.

Moreover, contrary to Petitioner's arguments, portions of Petitioner's supplemental information directed to whether engineers and companies generally followed 802.11 proposals for product development purposes is not relevant to "link[ing] WWiSE's contributors to the reference's public availability." Mot. at 1, 5 (citing INTEL-1047 ¶ 8); *see also* Mot. 5-7 (citing INTEL-1047 ¶¶ 6-7; INTEL-1048 23:4- 25). Product development activities of persons or companies at large has no bearing on the facts surrounding the distribution of proposals among *the WWiSE contributors* and whether that distribution satisfies the public availability requirements. Indeed, the supplemental Lansford declaration separately discusses the WWiSE contributors and general companies' alleged product development activities. INTEL-1047 ¶ 10 (WWiSE Contributors), ¶¶ 5-8 (product development).

Because Petitioner failed to establish the relevance of this supplemental information, its Motion, at least as to these portions, should be denied.

III. Conclusion

For the reasons set forth above, the Board should deny Petitioner's Motion.

Respectfully submitted,

Dated: April 4, 2024
