Who Are Your Competitors?

Frankly, no one. (Well maybe the file cabinet.) We developed the concept of 3rd Party ITM Compliance Management and we're patent pending. We've been developing our team and our platform for several years. Our concept is now a proven model that has been producing real results for years too. Of course there are companies out there who do a great job providing ITM tools but not necessarily focused on improving compliance. Companies like buildingreports.com and Onsite Software are helpful for inspection companies in collecting report information but they don't help the fire marshal enforce on non-compliant properties. These tools produce PDF reports that can be attached to our form and submitted to the fire marshal.

We've already seen fly-by-night competitors come and go once they realize the hard work ITM Compliance takes. DO NOT invest your city into a company that lacks the experience, the expertise, and the clear legal right to provide their services.

And what about the file cabinet? Well, before TegrIS there was the file cabinet. There are still fire departments out there that have trouble growing past it. An old process is our biggest competition. Change is hard but TegrIS helps with that too.
