WE INVENTED ELEVATED TACTICS...

As the inventors of the first ever Elevated Tactics System in 1997, we literally coined the phrase "Elevated Tactics". Over the past twenty years we have continued to innovate, while our competitors can only imitate.

Our revolutionary H.A.R.A.S., which has been in use by elite tactical units on multiple continents since 1998, and continues to be copied around the world, has since been superseded by our all new ARES.

AND NOW WE'VE REINVENTED ELEVATED TACTICS

MIT's newest Elevated Tactics System, the ARES, is the culmination of years of research, learning, and development. The ARES is *Lighter, Faster, Stronger,* and *Reaches Higher* than any other ETS ever made, but most importantly the ARES is the safest, and most effective system ever made.

MIT has partnerships with a variety of vehicle manufacturers, and is proud to be teaming with LENCO Armored Vehicles for the ARES/Bearcat integration.
