

aircraft inspection automation

We enable digital automation of maintenance and repair processes.
Trusted by the world's largest maintenance and repair organizations.

inspection automation that works for **any aircraft** ,
indoor and outdoor and with **moving obstacles**
in the maintenance environment

Fits into existing workflows, providing compliant, consistent output and high-quality insights through data.

inspection drones

Capable of fully automatic flight, 10x faster than the current manual method.

- 45 minutes for a narrowbody
- 3 hours for a widebody

[explore drone solutions](#)

data analysis platform

Reduced human error in a repetitive task by automatic analysis of inspection images.

- Automatic (AI assisted) damage detection
- Cloud-based storage and review software
- Customizable reporting

general visual inspections

An automated general visual inspection is performed by a drone, and the inspector reviews the photos.

lightning strike inspections

Aircraft lightning strike inspection time reduced by 75%, saving costs and reducing safety risks for personnel around aircraft.

paint peeling inspections

5x more accurate estimation of paint damages and high speed tape on the aircraft wings enables better planning of repairs.
