

2017 LAGOON CRAWLER

INTRODUCING THE NEW 2017 LAGOON CRAWLER

AGITATOR SWIVEL

The new replaceable ball bearing swivel is resistant to sand and pressure. The new design eliminates any leaking or seizing up issues. Now operated by hydraulic cylinders instead of motors, resulting in less moving parts and less maintenance. (Below)

WARNING LIGHT SYSTEM

The new warning light system has a larger red light on top of the crawler. When flashing, the indicator lights on the wire box act as a troubleshooting guide telling you what's wrong. Also, a noticeable sound alarm will go off for engine faults and 200-degree gear box temperatures. (Below)

2015/2016 MODEL

ENGINE FAULT RESET

The new version allows the fault to be reset simply by hitting the "STOP" button on the remote for the engine, which activated a relay internally and resets the fault allowing you to reset it. (Left)

ELECTRONIC FUEL PUMP

The new electronic fuel pump now has an override button or a primer button where it primes the fuel into the engine. (Left)

OPTIONAL CRAWLER CRANE LIFT

UPDATES SINCE 2015

HYDRAULIC CLUTCH

The new version means no more adjusting the linkage. You turn it on and there is never any adjustment on the clutch. The clutch also features safeties where if the engine load becomes less than 20% load, the engine senses that the pump is no longer engaged, so it disengages the clutch and idles itself down.

RESTARTING ISSUES

On the 2017 Lagoon Crawler, as soon as the engine stalls it automatically goes out of gear. Now if the Crawler tries to restart itself, it doesn't burn out the starter.

LARGER FUEL TANKS

The new (2016/2017) Crawlers have larger fuel tanks at 200 GAL total. They have a sump in the bottom allowing you get all the fuel in the tank. Where with the previous version, you would likely have 20 GAL left in the tank when you run out of fuel.

EXIT IN OPPOSITE DIRECTION

The new 2017 design switched the wheels on the Lagoon Crawler so it now enters and exits the lagoon in the opposite direction. This will keep the manure out of the radiator.

WHITE IRON HOUSING

In 2016, the housing changed from steel to white iron. With this change, a housing can last more than 10 times longer with the new cast iron housing. This was specifically designed for sand lagoons and can withstand then harshest conditions.

SAFETY SHUT OFF

If power is lost to your wireless box, the control panel would shut down and then the engine. If a fuse blew, rather than losing control of the steering, the Crawler would shut down.
