Evolo is a demonstrator vehicle invented, designed and built by 15 masters students studying Naval architecture and Lightweight structures at the Royal Institute of Technology (KTH) in Stockholm, Sweden. Evolo is an electrically propelled hydrofoil water-toy. It is totally silent, environmentally friendly and extremely fun to ride due to its fast and inherently unstable nature. Stearing is done by a combination of weight shifting and thrust control. Evolo is experimental and not on the market yet. More material is available at <http://flygmac7.flyg.kth.se/cdio>

Song	Diggin' On James Brown
Artist	Tower Of Power
Album	3CD Slipcase
