ABC.com Readies Online HD Shows as "Streamlettes" from Move Networks

One of the most spectacular online video players can be found at [ABC.com](#). It was introduced just last month and has attracted quite a bit of attention. The player shows remarkable, full-screen high quality. And, it loads quickly.

It's not Flash, it's not Windows Media and it's not distributed on P2P. It's a new kind of streaming media from a small company in Utah, [Move Networks](#). In addition to powering ABC.com, the company's platform powers the snazzy [Fox TV channel on MySpace](#).

Beginning in July, ABC.com will start to [stream HD quality](#) video on the player.

Last week at the Streaming Media East conference, I caught up with Move's Jim Ericson who fills us in on how this works. The company uses the [new VP7 codec](#) from On2 Technologies to encode a wide variety of file formats. He explains that video is broken up into "streamlettes" which are somehow reassembled by the end user. Check out this [interview](#).

-- Andy Plesser

Full Disclosure: On2, which is referenced above, is a client of Plesser Holland, the public relations firm that publishes Beet.TV
