Subject: CAB System Questions

Tim,

You have been helping some of my colleagues and consultants on a solar project in Virginia, and I'm hoping you can address some questions raised by a customer on another solar project that we are proposing to use the CAB system. Please see questions below and advise. We need to respond to our customer on Monday, so I hope you can address them quickly.

- Details of other similar applications in which CAB system has been used – Please provide any information on other industrial applications.
- Studies on O&M implications of using CAB system over a 25 year design life – Customer is concerned with mechanical cable damage due to movement of cable in hanger due to wind, etc.
- Any pictures of CAB system in use on solar projects.
- Confirmation that cable rings are PV coated with at least a 25 year design life.
- Reasoning behind 18"-25" distance between cable rings.
- Information on sagging of cables at the center; how much sagging is seen at the center with cable rings being 18"-25" apart?

I will call you Monday morning to discuss. Thank you.
