UTILITY PATENT APPLICATION TRANSMITTAL

(Only for new nonprovisional applications under 37 CFR 1.53(b))

Attorney Docket No.	1859.029USC15
First Named Inventor	Marc Krüger
Title	PORTION CAPSULE HAVING AN IDENTIFIER
Express Mail Label No.	Via EFS at USPTO.GOV on June 20, 2022

APPLICATION ELEMENTS

See MPEP chapter 600 concerning utility patent application contents.

1. [ ] **Fee Transmittal Form** (PTO/SB/17 or equivalent)
2. [ ] **Applicant asserts small entity status.** See 37 CFR 1.27
3. [ ] **Applicant certifies micro entity status.** See 37 CFR 1.29. Applicant must attach form PTO/SB/15A or B or equivalent.
4. [✓] **Specification** [*Total Pages* 20] Both the claims and abstract must start on a new page. *(See MPEP § 608.01(a) for information on the preferred arrangement)*
5. [✓] **Drawing(s)** (35 U.S.C. 113) [*Total Sheets* 12]
6. **Inventor's Oath or Declaration** [*Total Pages* 1] *(including substitute statements under 37 CFR 1.64 and assignments serving as an oath or declaration under 37 CFR 1.63(e))*
   a. [ ] Newly executed (original or copy)
   b. [✓] A copy from a prior application (37 CFR 1.63(d))
7. [✓] **Application Data Sheet** ** See note below.* See 37 CFR 1.76 (PTO/AIA/14 or equivalent)
8. **CD-ROM or CD-R** in duplicate, large table, or Computer Program (*Appendix*)
   [ ] Landscape Table on CD
9. **Nucleotide and/or Amino Acid Sequence Submission** (*if applicable, items a. – c. are required*)
   a. [ ] Computer Readable Form (CRF)
   b. [ ] Specification Sequence Listing on:
      i. [ ] CD-ROM or CD-R (2 copies); or
      ii. [ ] Paper
   c. [ ] Statements verifying identity of above copies

ADDRESS TO:

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

ACCOMPANYING APPLICATION PAPERS

10. [ ] **Assignment Papers** (cover sheet & document(s))
    Name of Assignee _____
11. [ ] **37 CFR 3.73(c) Statement** (*when there is an assignee*) [✓] **Power of Attorney**
12. [ ] **English Translation Document** (*if applicable*)
13. [✓] **Information Disclosure Statement** (PTO/SB/08 or PTO-1449)
    [ ] Copies of citations attached
14. [✓] **Preliminary Amendment**
15. [ ] **Return Receipt Postcard** (*MPEP § 503*) (*Should be specifically itemized*)
16. [✓] **Certified Copy of Priority Document(s)** (*if foreign priority is claimed*)
17. [ ] **Nonpublication Request** Under 35 U.S.C. 122(b)(2)(B)(i). Applicant must attach form PTO/SB/35 or equivalent.
18. [✓] **Other:** USPTO is hereby authorized to charge any additional fees required under 37 C.F.R. Sec. 1.16; 1.17 and 1.21 to Deposit Acct. No. 50-1097 -TrackOne Request - Substitute Specification- Clean & Marked Up / Replacement Drawings

***Note**: (1) Benefit claims under 37 CFR 1.78 and foreign priority claims under 1.55 **must** be included in an Application Data Sheet (ADS).
(2) For applications filed under 35 U.S.C. 111, the application must contain an ADS specifying the applicant if the applicant is an assignee, person to whom the inventor is under an obligation to assign, or person who otherwise shows sufficient proprietary interest in the matter. See 37 CFR 1.46(b).

This collection of information is required by 37 CFR 1.53(b). The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

PORTION CAPSULE HAVING AN IDENTIFIER

CROSS REFERENCE TO RELATED APPLICATIONS

[0001] This application claims benefit from and is a divisional of U.S. Application No. 15/211,823 filled July 15, 2016 entitled PORTION CAPSULE HAVING AN IDENTIFIER, which claims benefit from and is a continuation of U.S. Application No. 13/744,623, filed January 18, 2013, entitled PORTION CAPSULE HAVING AN IDENTIFIER, which claims benefit from International Application No. PCT/EP2011/003677, filed on July 22, 2011, entitled PORTION CAPSULE HAVING AN IDENTIFIER, which applications are hereby incorporated by reference in their entirety.

BACKGROUND

[0002] The present invention relates to a portion capsule for producing a beverage, comprising a base element having a cavity in which a beverage raw material is provided and which is closed by a membrane fastened to the base element.

[0003] Such capsules are well known and are being launched onto the market in abundant variety. Since these capsules are often quite similar, it is possible that the manufacturer's capsules are used in a coffee machine designed by another manufacturer, although they are not suited for it. This may result in significant security issues and/or the coffee machine may be damaged.

[0004] The object of the present invention is therefore to provide a portion capsule which only is suitable for a specific coffee machine.

SUMMARY

[0005] The object is accomplished according to the present invention by a portion capsule for producing a beverage, comprising a base element having a cavity in which a beverage raw material is provided and which is closed by a membrane fastened to the base element, wherein it has an identifier, which allows to individualize the respective portion capsule.

[0006] The present invention relates to a capsule for producing a beverage or foodstuff, comprising a base element having a cavity in which a beverage raw material is provided. Such capsules are, for example made of plastic, natural materials and/or biodegradable materials

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 9 of 598

and substantially have a base element, in particular a deep-drown base element, i.e. it is substantially designed frustoconically or cylindrically. The beverage raw material is arranged within the portion capsule's cavity and is extracted and/or dissolved in a liquid, in particular water. After the beverage raw material has been filled into the cavity the base element is usually sealed by a membrane. In particular the membrane is localized on the opposite side of the base element's bottom. The membrane can be made of the same or different material as the base element and is substantially attached to the base element using a sealing and/or an adhesive bonding. Additionally the cavity could contain one or several built-in elements, such as, for example a filter, a non-woven, a felt, a shut-off device and/or something similar to those. For the case that a non-woven and a felt are arranged within the cavity, they are interconnected preferably. The non-woven and/or the felt can be made of several layers in such a way that the layers may differ in the kind of its starting material and/or its preparation. Moreover the membrane and/or the bottom can be provided with a plurality of recesses (holes).

[0007] According to the present invention, it is provided that the portion capsule has an identifier that allows to individualize the respective portion capsule. In the context of this invention individualizing means that the respective portion capsule can be assigned to a group of capsules that are suitable for the coffee machine preferably. It is not necessary that the coffee machine is able to specify and/or identify the portion capsule. In fact it is much more important that the coffee machine associates the portion capsule with a group of portion capsules, which is suitable for the coffee machine. In particular, individualizing means that those portion capsules that are not appropriate for the coffee machine cannot be inserted into and/or directly fall through the holder, which is designed for the portion capsules in the coffee machine, and/or the coffee machine operates only with the corresponding portion capsules. Preferably a sensor/detection system handles the identifier and compares it with a stored reference substantially. Preferably, the coffee machine, in particular the water-providing-pressure pump, will be activated if the detected identifier matches with the reference. Otherwise the coffee machine will not start operating. Preferably the detection system is placed in the region of the coffee machine's media chute designed for the portion capsules. According to another preferred embodiment of the invention, the detection system may be placed in the region of the brewing chamber. Another possible embodiment of the invention provides that the identifier prevents portion capsules from inserting into the coffee machine. Alternatively or additionally, means, in particular mechanical means, more preferably, one or

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 10 of 598

more gearwheels, may be added to the media chute in order to guarantee that incorrect portion capsule cannot be inserted into the coffee machines by passing the media chute.

[0008] Preferably the identifier is composed of surface areas having different optical properties, for example reflection. These surfaces may be localized on the membrane, the side wall and/or the bottom of the portion capsules. Preferably, the portion capsule has at least two areas which differ in their optical properties, for example the reflection characteristics.

[0009] The detection of a recess and/or a bulge is also preferred. Preferably, recess and bulges alternate and/or at least two recesses or bulges are separately placed from each other. Especially it is possible that the recess and/or the bulge form a gearwheel that is attached to the outer border and/or at least partially extends to the wall region of the portion capsule. The recess and/or bulge may be produced by any shaping method, for example by deep drawing, preferably.

[00010] Furthermore, the recess may be realized by removing material. In particular the material's remove can be accomplished by punching or using a laser on condition that this processing does not damage a barrier layer placed in the portion capsule's material, which prevents moisture or aroma from escaping out of the portion capsule and/or water vapor or oxygen enters the capsule. The reading of the identifier, which is encoded in the recess and/or bulge, may be a result from a mechanical and/or optical method, for example. Alternatively or additionally, the identifier can be used to avoid that the portion capsule is inserted into the coffee machine. This applies in particular to the media chute. For example it is possible to design a portion capsule comprising a ring gear that is placed on its circumference and is compatible with another ring gear, which is placed in the media chute. If the media chute's ring gear only revolves for a corresponding ring gear of the portion capsule and its revolving allows the portion capsule to pass, only portion capsules equipped with the proper ring gear will pass the insertion lock.

[00011] According to a further subject matter of a preferred development of the present invention, the identifier may be included in the membrane. Preferably, the identifier is a layer or partial layer of the membrane. Such identifiers may be an optically detectable material, for example a fluorescent material. Furthermore, the identifier may be designed with layers made

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 11 of 598

of metal or ferrous metal or stripes made of metal or ferrous metal in or on the membrane, respectively.

[00012] Preferably the identifier is a machine-readable imprint. This is realized with a print in food approved color, preferably. Fluorescent materials like paper or print materials, whose optical properties change under the influence of temperature, are favored also. Preferably the print is a barcode, a logo or a rapport.

[00013] According to a further subject matter of a preferred development of the present invention, the identifier is an electrically conductive section, which can be placed all over the portion capsule, but is localized on the side wall, the edge and / or the floor preferably. The electrically conductive section, which is inserted into the coffee machine, can become part of an electric circuit and causes therefore a measurable change, which leads to the identification of the respective portion capsule. In a further preferred embodiment, the identifier is a section made of a ferromagnetic material.

[00014] Another construction version favors a RFID chip being the identifier.

[00015] If the portion capsule is customized according to the invention, portion capsules that are not in line with the coffee machine will be prevented from inserting into the coffee machine. Furthermore it is possible that the identifier allows to identify the portion capsule located in the brewing chamber in such a way that the production process of beverage or food may be controlled, for example by adjusting the temperature, the pressure and/or the amount of water.

[00016] According to a further subject matter of a preferred development of the present invention, the portion capsule's material is weakened in the bottom area caused by a selective material removal, for example by using a laser. The weakening is provided for piercing the portion capsules using a mandrel. This procedure is needed for the beverage's preparation. Since the material is weakened in the section, which is treated with a laser and is supposed to be pierced using the mandrel, the degree of necessary force for piercing the portion capsule is reduced. The mandrel of such coffee machines is usually equipped with a force limitation that limits the force, which is dedicated for pressing the mandrel against the portion capsule's bottom. This preparation avoids that portion capsules having no appropriate weakening can be

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 12 of 598

used in such a coffee machine. Consequently the weakening represents another kind of identifier.

[00017] According to a further subject matter of a preferred development of the present invention, the portion capsule has an edge region, which is preferably attached to the base element. Preferably, the edge is located opposite of the base element's bottom area. After the raw material has been filled in the portion capsule, a membrane can be attached to this edge region, for instance. Moreover the edge can also designed for guiding the portion capsule into the chute in order to position the portion capsule in the brewing chamber properly. Simultaneously it is possible to use the surface of the edge for stopping and/or sealing.

[00018] Preferably provision is made for the portion capsule to have means for fit locking, friction locking and/or detection in the edge region. The means for fit locking and/or friction locking may be used to activate a complementary mechanism, which is located in the coffee machine, in order to allow inserting the portion capsule into the coffee machine and/or starting a sensor, like a gearwheel, that transmits a signal to a control unit depending on whether the portion capsule corresponds to the coffee machine or not. Alternatively or additionally, a detector may identify the mean for fit locking, friction locking and/or detection in order to check that the portion capsule is suitable to the respective coffee machine.

[00019] Preferably the means for fit locking, friction locking and/or detection is a gearwheel or a gearwheel' segment, which are located, in particular, in the outer area of the edge region. The teeth of the gearwheel or the gearwheel' segment may be shaped in any commonly used form, which is known, for example, by an expert from gear manufacturing. Preferably it is provided that these teeth are triangular, rectangular, square or wavy.

[00020] Preferably there is a sealing surface, that is arranged on the interior side relative to the gearwheel or the gearwheel' segment.

[00021] Another and preferred state-of-the-art technology is a portion capsule for producing a beverage, comprising a base element substantially designed frustoconically or cylindrically, having a cavity in which a beverage raw material is provided and which is closed by a membrane fastened to the base element with the base element having a wall region and the base element having a bottom area, which is preferably located opposite to the

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 13 of 598

membrane, with the wall region having several grooves and the grooves which are located between membrane and bottom area covering the wall region along its height at least partially. The grooves may be also located in the edge region, in particular on the outer area of the edge region.

[00022] This portion capsule has the advantage over the portion capsule according to the state-of-the-art technology that, for instance, the grooves reinforce the base element's wall region. On the one side these grooves make the portion capsule more stable towards mechanical forces and prevent the portion capsule from deformation and buckling, in particular. The arrangement of the grooves, which are located at the wall region, additionally improves the performance of the portion capsule while the extraction liquid flows through it in the brewing chamber, since the arrangement of the grooves, in particular those partially expending over the wall region between membrane and bottom area, increase quality and reliability of the extraction process significantly. According to the invention another advantage is that the base element's thickness can be reduced, because the use of grooves improves the physical stability. The production of the portion capsule is therefore much less expensive and more environmentally friendly. On the other side the grooves reduce or avoid the contact between the portion capsule's wall region and the wall of the brewing chamber. As a result ejecting or removing the portion capsule from the brewing chamber is made easier. Another advantage of using a plurality of grooves is that the stream of the extraction liquid, which flows along the base element in the cavity, can be optimized by choosing a grooves' structure that is able, for example, to generate on the one hand a better or stronger turbulence in the extraction liquid or on the other hand a more uniform (laminar) flow of the extraction liquid, in the wall region. The control of the liquid may be obtained by the structure of the grooves itself or by using simple means additionally. A stronger turbulence compared to the one known in the state-of-the-art has the advantage that no unintended and casual main streams are formed in the raw materials. Instead the extraction liquid equally flows through the raw material in all of the volume. Thus the extraction process is much more efficient and can be controlled more precisely and reproducibly.

[00023] In particular the raw material may be coffee powder (especially ground roasted coffee), chocolate powder, milk powder, tea or the like. Alternatively, it is conceivable that the raw material is a beverage's extract, such as instant coffee for example.

Nespresso USA, Inc. Ex. 1002
Page 14 of 598

[00024] In particular, the grooves are recesses and bulges, which are preferably directed along a main extension and are preferably extended along the wall portion or the periphery of the edge region. More preferably, the grooves are formed as webs and/or notches. A gearwheel, for instance, may be obtained by the grooves. Therefore the grooves are part of the base elements' wall, optionally located on the inner side facing to the cavity and/or on the outside facing away from the cavity.

[00025] According to a preferred embodiment of the present invention, it is provided that the grooves form an identifier that allows individualizing the portion capsule. In the context of this invention individualizing preferably means that the respective portion capsule can be assigned to a group of capsules that are suitable for the respective coffee machine or the machine producing a beverage. It is not necessary that the coffee machine or the device for producing a beverage is able to specify and/or identify the portion capsule. It is more important that the device for producing a beverage, in particular a coffee machine, associates the portion capsule with a group of portion capsules, which is appropriate for the respective device for producing a beverage, in particular a coffee machine. In particular, individualizing means that those portion capsules that are not appropriate for the coffee machine (or the device producing the beverage) cannot be inserted into and/or directly fall through the holder, which is designed for the portion capsules in the coffee machine (or the device producing the beverage), and/or the coffee machine (or the device producing the beverage) operates only with corresponding portion capsules ("proper portion capsule"). In particular, individualizing means that the coffee machine or the device producing the beverage will not operate properly in the intended use, if the used portion capsule is not customized according to the invention. Preferably a sensor/detection system, attached to the coffee machine or the device producing the beverage, records the identifier and substantially compares it with a stored reference. In particular, it is possible that such an identification process is based on a mechanical fitting, especially a fitting of a gearwheel or of a contour comparable with a gearwheel, which is attached to the device producing the beverage or the coffee machine and interacts with the portion capsule. It is preferred that the device for producing the beverage or the coffee machine only will operate, if the identifier matches to the reference or the mechanical fittings match with each other. In this case the device for producing the beverage particularly starts to operate, especially activates a pressure or water pump. The mean for detection or mechanical fitting is preferably located in the region of the media chute or in the region of the device for producing the beverage. Alternatively the identifier or the mechanical fitting may avoid that

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 15 of 598

an unsuitable portion capsule is inserted into the device for producing the beverage. A portion capsule, which is designed in accordance with the invention, makes it possible that a portion capsule that is not designed for the device for producing a beverage cannot be inserted into it. Additionally the identifier allows that the device for producing the beverage, especially the coffee machine, may specify the sort of the portion capsule and thereby control the production process of beverage and food by adapting, for example, the pressure, the temperature and/or the amount of water.

[00026] According to a further preferred embodiment of the present invention, it is provided that at least a part of the grooves and at least in a subarea parallel to the main plane of the membrane is gearwheel shaped.

[00027] According to the present invention it is an advantage that it is possible to increase the stability of the portion capsule's wall region, to realize improved turbulences of the extraction liquid and thereby to improve the extraction's process under the same conditions, for example, such as material thickness and the like. Another advantage is that it is easy to generate a mechanical identifier or a mechanical fitting that matches with a fitting tool that belongs to the device for producing a beverage. According to the invention it is an further advantage that, for example, a gearwheel, which is attached to the device for producing a beverage and is, for example, located in the region of the media chute or similar, can possibly interacts with the gearwheel's contour of the portion capsule. In this way it is possible to generate a mechanical fitting that allow to individualize the portion capsule as a proper one and/or to specify the sort of portion capsule and/or to rotate the portion capsule about an axis of rotation, that is perpendicular to the membrane's main plane, by using the gearwheel's arrangement. Such an embodiment of the invention makes it possible that the portion capsule is always opened with the device for producing a beverage on the same spot (with respect to its angular position) and therefore the raw material is extracted on the same manner. Moreover the grooves prevent the portion capsule from being inserted into the coffee machine.

[00028] In a preferred version of the invention, it is provided that there is a flange/edge region being averted from the bottom region, for fixing the membrane to the base element, where in the wall region between flange/edge region and bottom region preferably has a border and the grooves are being preferably extended to this border.

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 16 of 598

[00029] Because of this it is another advantage according to the invention that on the one hand the wall region can be constructed in a stable and reinforced manner and on the other hand the gearwheel shaped contour of the grooves, located at the wall region, is able to absorb a relative high load. With that it is possible that the portion capsule can be rotated easily and without any damaging of the portion capsule within the device for producing a beverage.

[00030] Preferably the base element's diameter is enlarged in the border's region compared to the wall region, which range from the border to the bottom region.

[00031] This gives rise to the advantageous possibility to stack portion capsule or portion capsules' base elements easily and robustly.

[00032] Moreover it is preferred that at least a part of the grooves are gearwheel shaped and at least a plane, which is at least partially gearwheel shaped, is parallel to the membrane in such a way that the gearwheel shaped contour expands over the borders or the flange/edge region.

[00033] Further preferred versions of the present invention relate to portion capsules that implement one or more of the following characteristics:

- the base element tapers in the direction of the flange in the border's region,
- the grooves directed toward the bottom region expand over the border's region,
- the grooves approximately cover 20% -80%, preferably 40% - 60% of the wall region, which is placed between the border and the bottom region,
- the grooves are constructed in such a way that the wall region is reinforced and/or the grooves causes an extraction liquid's turbulence in the cavity.

[00034] Other preferred versions of the present invention relate to portion capsules that are manufactured in such a way that the ratio of the diameter of that wall region of the base element which adjoins the flange to the diameter of the flange is between 0.85 and 0.89, and in particular substantially 0.87.

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 17 of 598

[00035] In a preferred version the wall region's diameter, which is adjacent to the flange, is 39 millimeter and the flange's diameter is 45 millimeter. Another advantageous version of the invention prefers a base element having a thicker wall region in the border's region compared to the wall region between bottom region and flange. Since the portion capsule's design, which contains grooves in the wall region, improve its stability, it is possible to save material by manufacturing the portion capsule and therefore to reduce cost and energy required for manufacturing the portion capsules.

[00036] According to the invention it is further provided that a filter element is arranged into the cavity. Such a filter element divides the cavity into a first region for accommodating the beverage raw material and into a second region for accommodating a beverage extract. In particular, it is provided that the filter element is made of a non-woven material.

[00037] According to a further subject matter or a preferred development of the present invention the portion capsule according to the invention is intended for the preparation of a hot beverage. In the following the invention is explained based on the Figures 1 – 22. These explanations do not restrict the general idea of the invention.

DETAILED DESCRIPTION

[00058] The view illustrated on the right side of **Figure 1** shows a portion capsule 1 comprising a base element 2 that has a wall region 2.1 and a bottom area 2.2. The wall region 2.1 and the bottom area 2.2 define a cavity, which may include the raw material and perhaps a built-in element. After filling the cavity is sealed by a membrane, which is preferably attached to the edge region 2.4 of the base element using seal or glue. This portion capsule can be inserted into a brewing chamber shown in Figure 12, with a liquid, in particular water, flowing through it. During this process the raw material is extracted or dissolved and therefore the beverage is produced. According to the invention the portion capsule has only one identifier that allows to determinate whether the respective portion capsule goes with the coffee machine's brewing chamber and the parameters for processing are chosen properly. If it is not the case, significant security issues arise. Inserting the wrong portion capsule, for example, endanger the brewing chamber's tightness. In this case hot water can be discharged under high pressure and therefore compromise the user's safety. Otherwise it is also possible that inserting the wrong portion capsule damages the coffee machine. In this example the identifier is represented by several raised areas 8, which differ in reflection properties from the sections between the raised areas. As shown by the arrows the bulges are passed by a mean for detection (here: an optical detector) that is able to differentiate between the unequal sections 5, 6 having different optical properties such as, for example, reflection. Switching between the different sections or the number of bulges represents the identifier. After the identifier has been read out the identifier is compared to a stored reference. If the identifier agrees with the reference, the coffee machine will start operating. Particularly the pump, which is for example responsible for pushing hot water through the brewing chamber, will not start operating, if the identifier does not agree with the reference.

[00059] All the remarks concerning the identifier apply to all the examples.

[00060] **Figure 2** shows another embodiment of the portion capsule according to the invention. Here the portion capsule has a barcode placed in the area of the membrane's top surface. This bar-code may be printed by material removal or may be generated by a medium that is integrated in the foil and can be detected optically such as a fluorescence agent.

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 20 of 598

Alternatively metal rings may be part of the foil or attached to the foil. The bar-code's section may be made of a ferromagnetic material. As shown by the arrow 15 the bar-code alternatively can be attached to the base element's edge region being averted from the membrane. Such a bar-code is read out by a detector 13 placed, for example, in the media chute. The bar-code represents the identifier according to invention.

[00061] **Figure 3** shows another embodiment of the portion capsule according to the invention. In the present case the identifier comprises recesses and bulges, which result from material removal or reshaping the portion capsule as shown here by the example of the portion capsule's wall 2.1. In the present case recesses and bulges interact with a mean for detection 13, which operates like a key, wherein the coffee machine only start operating, when all elements 13 are placed in the respective recess. Therefore an electric circuit may be changed or especially closed.

[00062] **Figure 4** shows an embodiment of the portion capsule being substantially identical to the embodiment illustrated in Figure 1. As an alternative version of the invention the figure additionally shows that the sections differing in terms of optical properties can be attached to the cover foil, for example in the form of a bar-code.

[00063] **Figure 5** shows an embodiment of the portion capsule being substantially identical to the embodiment illustrated in Figure 3. Again the recesses represent the key bit. The coffee machine only will start operating, if the recesses interact with the corresponding bulges and therefore an electric circuit is changed respectively. The placement of such a system is not restricted to the brewing chamber. For instance the system may be placed in the portion capsule's media chute.

[00064] **Figure 6** shows a version of the invention that includes an electric material forming a surrounding ring, which preferably has a raised form. The electrically conductive material is scanned by electric sliding contacts, which are placed in the media chute and form electric contacts of an electric circuit, while the portion capsule is inserted.

[00065] **Figure 7** an embodiment of the portion capsule being substantially identical to the embodiment illustrated in Figure 6, in which it is provided that the ring area has reflective or mat sections, for example in form of a covering, and allows a read-out by means for optical

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 21 of 598

detection, which are placed in the media chute and are part of a control current, while the portion capsule is inserted.

[00066] **Figure 8** shows a relative broad and raised ring which represents the identifier. The media chute is equipped with a corresponding vacancy that tests whether the portion capsule has the proper identifier. The broad ring is scanned, for example, by mechanical sensors, which are placed in the media chute and close the contacts of an electric circuit, while the portions capsule is inserted.

[00067] **Figure 9** shows another embodiment of the portion capsule according to the invention. In the present case an electrically conductive coat is integrated in the edge region's back and is scanned by electric sliding contacts, which are placed in the media chute and form electric contacts of an electric circuit, while the portion capsule is inserted.

[00068] **Figure 10** shows another embodiment of the portion capsule according to the invention. In the present case the portion capsule has an electrically conductive coat such as a conductive varnish layer or an aluminum foil. The coat is scanned by electric sliding contacts, which form electric contacts of an electric circuit, while the portion capsule is inserted.

[00069] **Figure 11** illustrates a version of the portion capsule having also an electrically conductive coat that is placed on its bottom and is identified by a metal sensor, which is placed in the chute and, for example, detects inductively, while the portion capsule is inserted.

[00070] The embodiment of the invention shown in **Figure 12** has a build-in element made of metal (here a strainer 19) that is recognized as identifier by a metal detector.

[00071] The version of the invention shown in **Figure 13** includes a ferromagnetic material placed at the portion capsule' bottom. The identifier is scanned, for example, by a magnet, which is placed in the chute, while the portion capsule is inserted. The ferromagnetic material acts as identifier.

[00072] **Figure 10** shows another embodiment which includes a bar-code placed in the region of the cover foil.

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 22 of 598

[00073] According to the embodiment shown in **Figure 15** a metallic ring is integrated in the wall and closes an electric circuit placed in region of the brewing chamber.

[00074] **Figure 16** shows another embodiment of the portion capsule 1 according to the invention. The illustrated portion capsule features a base element that is basically conical-shaped in the present case and has a bottom region 2.2 and a wall region 2.1. It is provided that the base element contains the raw material and, if necessary, build-in elements like a filter as illustrated here. The expert knows that the build-in element may also include other build-in elements. A flange/edge region 2.4, which is preferably circular and, for example, may be used for sealing a cover foil to it, is attached to the end of the base element, which is placed opposite to the bottom. The flange/edge region has means for fit locking, friction locking and/or detection 2.4.2 in the outer area (outer circumference). As especially shown in the Figures 17a – 17c the mean 2.4.2 is, in the present case, a gearwheel that is formed by several recesses/bulges evenly arranged in the edge region. Preferably, it is provided that the edge region has a sealing surface, which sealingly interacts with the sealing 21 attached to the brewing chamber 27, on the interior side of the gearwheel. The sealing 21 makes sure that the water coming from a water inlet 28 flows rather through the portion capsule by passing a opening, which has been made by a mandrel 29, than around it.

[00075] **Figures 17a – 17c** show different embodiments of the mean 2.4.2.. According to the version shown in Figure 17a the gearwheel has forty-five teeth. According to the version shown in Figure 17b or 17c the gearwheel has twenty-two or twenty-nine teeth, respectively. The expert knows that the manufactured teeth can be shaped arbitrarily. All Figures 17a – 17c demonstrate how the portion capsule 1 can be hold by a part of the brewing chamber 27 using two holding arms 30. The holding arms interacts with the mean 2.4.2. If they are not available, the holding arms will not hold the portion capsule and the portion capsule will not be inserted into the brewing chamber and will fall through it into a dropping box instead.

[00076] **Figure 18** shows the mean 2.4.2. along with an mean for fit locking 24, which is attached to the coffee machine and is represented by a pinion here. It is provided that the mean for fit locking 24 is placed in the media chute having a port for inserting the portion capsule in the coffee machine. The distance between the inner wall of the portion capsule 25 and the pinion 27 are designed in such a way that the portion capsule only will pass the port,

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 23 of 598

if the mean for fit locking is formed complementary to the teeth of the pinion 27. Only in this case the portion capsule rotates the pinion 24 while it falls. Both rotating and falling are represented by arrows in the figure. The portion capsule needs the rotation for passing the media chute's port and falling in the intended position afterwards. If the portion capsule has no or wrong mean of fit locking, it will be impossible to place the portion capsule by passing the media chute in the intended position. Additionally or alternatively it is provided that the pinion 24 has a pick-up that detects the rotary movement and transmits it to a control unit. If the rotation at least correspond a defined rotating element, the control unit will activate, for example, the brewing unit. The expert knows that the portion capsule's border may include means for friction locking that interacts with a mean, for example an edge, and shift it in such a way that the shift is detected and therefore the brewing chamber is activated.

[00077] The expert moreover knows that a sensor, being for example a camera, which detects the form of the mean 2.4.2., may be installed in the media chute. In the present case the form and/or the distance between the teeth may be detected. If the proper portion capsule was inserted, a resulting signal could be transmitted to a control unit, which activates the brewing chamber.

[00078] **Figure 19** schematically shows a view of another portion capsule's version according to an embodiment of the present invention. **Figure 20** illustrates the same portion capsule from a different point of view schematically. Figure 19 shows the front view of the portion capsule. Figure 20 shows the portion capsule viewed from an angle below. In all figures the portion capsule is labeled with the reference sign 1. The portion capsule substantially has a frustoconically shaped base element 2, which is formed similar to a pot and encloses a cavity 3. The cavity 3 is sealed by a membrane 4. Since the viewing direction of Figure 1 is essentially parallel to the plane, in which the membrane is located, the figure just adumbrate the membrane at the upper edge of the portion capsule. In particular the base element 2 comprises a soft, semi-rigid or rigid plastic material which is deep-drown, preferably. The membrane comprises a foil made of plastic material or aluminum. Preferably the base element has a circumferential mounting flange 17 in the region of the membrane, with the membrane and the mounting flange 17 being firmly bonded, in particular by welding or gluing. Preferably a filter element, which is not specifically depicted in the figures, is placed within the base element 2. For instance, the filter element is made of thermoplastic resin such as, for example, polypropylene. The filter element could also be made of a non-

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 24 of 598

woven material such as, for example, thermoplastic resin. Preferably the filter element divides the cavity 3 in two sections. It is provided that the first section can be filled with a raw material and the second section can be filled with and particularly collect a beverage's extract, which is not shown, during the extractions process. Both sections are not illustrated individually.

[00079] The portion capsule is intended for inserting into a brewing chamber or a device for producing a beverage, which is not shown here. In particular such a device for producing a beverage is a coffee machine. The device for producing a beverage could be also a machine that produces a tea drink, a chocolate drink or any other beverage. Preferably an extraction liquid, which is particularly water or hot water, is brought under high pressure into the brewing chamber of the device for producing a beverage. The extraction liquid interacts with the raw material of the beverage in such a way that an extract of a beverage or a beverage is generated. In particular the filter element is utilized as a strainer for the extract of a beverage.

[00080] According to the invention the base element 2 has a wall region 12 and a bottom area 11. The wall region 12 basically ranges from the flange 17 to the bottom region 11. Several grooves 15 are placed in the wall region. In particular these grooves are keyways that are integrated in the wall region 12 and are facing the cavity 3 and range from the flange 17 to the bottom region 11 (i.e. they run perpendicular according to Figure 19). According to the invention provision is made for the grooves 15 to be extended vertically across the wall region, i.e. they run straight from the flange 17 to the bottom region 11, in which it is not necessary that they are extended over the whole length. The grooves are formed according to the invention in such a way that the wall region is reinforced or stiffened due to the grooves 15. Moreover the plurality of the grooves 15, which are distributed over the wall region 12, realize an adhesion between wall region 12 and the brewing chamber's wall of the device for producing a beverage after the extraction process. This makes it easier to eject the portion capsule from the brewing chamber automatically. The portion capsule's version represented in Figure 19 comprises a circumferential border 16 that is placed at the wall region 12 ranging from the flange 17 to the bottom area 11, namely adjacent to the flange 17 facing towards the bottom area 11. The border 16 has an enlarged diameter (parallel to the membrane 4) compared to the wall region's ranging from the border 16 to the bottom area 11. It is provided

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 25 of 598

that the border's contour 16 is designed in such a manner that the border's diameter tapers towards the flange 7.

[00081] It is provided according to the portion capsule's embodiment, which is represented in Figure 19 and is in accordance with the invention, that the grooves 15 are placed in the border's region in the first part, partially range from the border 16 to the bottom area 11 across the wall region 12, in the second part and then finally end. All in all the grooves cover, for example, around 50 % of the extension of the wall region 12, which ranges from the flange 7 to the bottom area 11, wherein one-third of the grooves' extension is placed in the border's region and two-thirds of the grooves' extension is placed in the remaining wall region 12 that range from the border 16 to the bottom area 11.

[00082] A portion capsule according to the invention is shown as sectional view along the portion capsule's extension regarding its height in **Figure 21**, i.e. the section's plane is perpendicular to the membrane's main plane. **Figure 22** also shows a portion capsule according to the invention in a sectional view portraying the sectional plane, which is parallel to the membrane's main plane. It is noticeable that the interior of the portion capsule's cavity is shown in Figure 21. The portion capsule's material or the base element's material is so thin that the implementation of grooves at the exterior shown in Figure 19 leads to corresponding convexities and impressions at the interior. Figure 22 particularly illustrates the gearwheel shaped contour resulting from insertion of grooves in the portion capsule's wall region.

CLAIMS

1. Single-serve capsule for making a beverage, having a basic element with a cavity, in which a raw beverage material is provided, the capsule having a peripheral region which is provided on the basic element, and the cavity being closed by a membrane, which is fastened on the peripheral region of the basic element, wherein the capsule has an identifier, which makes it possible to individualize the respective single-serve capsule, characterized in that the identifier is a barcode which is provided on that side of the peripheral region of the basic element which is directed away from the membrane.

2. Single-serve capsule according to Claim 1, characterized in that a sealing surface is provided on the peripheral region and/or flange.

3. Single-serve capsule according to Claim 1, characterized in that it has an insert element with an identifier.

4. Single-serve capsule for making a beverage, having an essentially frustoconical or cylindrical basic element with a cavity for accommodating a raw beverage material, and with a membrane which closes the cavity, characterized in that the basic element has a wall region, wherein the basic element also has, on that side of the single-serve capsule which is directed away from the membrane, a base region, wherein the wall region, or the outer circumference of a flange has a plurality of channels.

5. Single-serve capsule according to Claim 4, characterized in that the channels realize an identifier, which makes it possible to individualize the single-serve capsule.

6. Single-serve capsule according to Claim 4, characterized in that at least some of the channels, and at least in a sub-region in a plane parallel to the main plane along which the membrane extends, have a gear-wheel-like contour.

7. Single-serve capsule according to Claim 4, characterized in that the channels are designed such that the wall region is stiffened by means of the channels and/or in that the channels provide for turbulence of an extraction liquid flowing in the cavity.

8. Single-serve capsule according to Claim 4, characterized in that the cavity contains a filter element, which subdivides the cavity into a first region for accommodating the raw beverage material and into a second region for accommodating a beverage extract.

9. Use of a single-serve capsule according to Claim 1 for making a hot beverage.

PORTION CAPSULE HAVING AN IDENTIFIER

ABSTRACT

A portion capsule for producing a beverage includes a base element having a cavity in which a beverage raw material is provided and which is closed by a membrane fastened to the base element.

DECLARATION (37 CFR 1.63) FOR UTILITY OR DESIGN APPLICATION USING AN APPLICATION DATA SHEET (37 CFR 1.76)

Title of Invention	PORTION CAPSULE HAVING AN IDENTIFIER

As the below named inventor, I hereby declare that:

This declaration is directed to:

☑ The attached application, or

☐ United States application or PCT international application number PCT/EP2011/003677

filed on July 22, 2011

The above-identified application was made or authorized to be made by me.

I believe that I am the original inventor or an original joint inventor of a claimed invention in the application.

I hereby acknowledge that any willful false statement made in this declaration is punishable under 18 U.S.C. 1001 by fine or imprisonment of not more than five (5) years, or both.

WARNING:

Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form PTO-2038 submitted for payment purposes) is never required by the USPTO to support a petition or an application. If this type of personal information is included in documents submitted to the USPTO, petitioners/applicants should consider redacting such personal information from the documents before submitting them to the USPTO. Petitioner/applicant is advised that the record of a patent application is available to the public after publication of the application (unless a non-publication request in compliance with 37 CFR 1.213(a) is made in the application) or issuance of a patent. Furthermore, the record from an abandoned application may also be available to the public if the application is referenced in a published application or an issued patent (see 37 CFR 1.14). Checks and credit card authorization forms PTO-2038 submitted for payment purposes are not retained in the application file and therefore are not publicly available.

Note: An application data sheet (PTO/AIA/14 or equivalent), including naming the entire inventive entity, must accompany this form. Use an additional PTO/SB/AIA/01 form for each additional inventor.

This collection of information is required by 35 U.S.C. 115 and 37 CFR 1.63. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 1 minute to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number

POWER OF ATTORNEY BY APPLICANT

I hereby revoke all previous powers of attorney given in the application identified in either the attached transmittal letter or the boxes below.

Application Number	Filing Date

(Note: The boxes above may be left blank if information is provided on form PTO/AIA/82A.)

☑ I hereby appoint the Patent Practitioner(s) associated with the following Customer Number as my/our attorney(s) or agent(s), and to transact all business in the United States Patent and Trademark Office connected therewith for the application referenced in the attached transmittal letter (form PTO/AIA/82A) or identified above: 25215

OR

☐ I hereby appoint Practitioner(s) named in the attached list (form PTO/AIA/82C) as my/our attorney(s) or agent(s), and to transact all business in the United States Patent and Trademark Office connected therewith for the patent application referenced in the attached transmittal letter (form PTO/AIA/82A) or identified above. (Note: Complete form PTO/AIA/82C.)

Please recognize or change the correspondence address for the application identified in the attached transmittal letter or the boxes above to:

☑ The address associated with the above-mentioned Customer Number

OR

☐ The address associated with Customer Number:

OR

Firm or Individual Name					
Address					
City		State		Zip	
Country					
Telephone		Email			

I am the Applicant (if the Applicant is a juristic entity, list the Applicant name in the box):

K-fee System GmbH

☐ Inventor or Joint Inventor (title not required below)

☐ Legal Representative of a Deceased or Legally Incapacitated Inventor (title not required below)

☑ Assignee or Person to Whom the Inventor is Under an Obligation to Assign (provide signer's title if applicant is a juristic entity)

☐ Person Who Otherwise Shows Sufficient Proprietary Interest (e.g., a petition under 37 CFR 1.46(b)(2) was granted in the application or is concurrently being filed with this document) (provide signer's title if applicant is a juristic entity)

SIGNATURE of Applicant for Patent

The undersigned (whose title is supplied below) is authorized to act on behalf of the applicant (e.g., where the applicant is a juristic entity).

Signature		Date (Optional)	24.08.2016
Name	Mark Krüger		
Title	CEO		

NOTE: Signature - This form must be signed by the applicant in accordance with 37 CFR 1.33. See 37 CFR 1.4 for signature requirements and certifications. If more than one applicant, use multiple forms.

☐ Total of forms are submitted.

This collection of information is required by 37 CFR 1.131, 1.32, and 1.33. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. Document Description: TrackOne Request

PTO/AIA/424 (04-14)

CERTIFICATION AND REQUEST FOR PRIORITIZED EXAMINATION UNDER 37 CFR 1.102(e) (Page 1 of 1)

First Named Inventor:	Marc Krüger	Nonprovisional Application Number (if known):	
Title of Invention:	PORTION CAPSULE HAVING AN IDENTIFIER		

APPLICANT HEREBY CERTIFIES THE FOLLOWING AND REQUESTS PRIORITIZED EXAMINATION FOR THE ABOVE-IDENTIFIED APPLICATION.

1. The processing fee set forth in 37 CFR 1.17(i)(1) and the prioritized examination fee set forth in 37 CFR 1.17(c) have been filed with the request. The publication fee requirement is met because that fee, set forth in 37 CFR 1.18(d), is currently $0. The basic filing fee, search fee, and examination fee are filed with the request or have been already been paid. I understand that any required excess claims fees or application size fee must be paid for the application.

2. I understand that the application may not contain, or be amended to contain, more than four independent claims, more than thirty total claims, or any multiple dependent claims, and that any request for an extension of time will cause an outstanding Track I request to be dismissed.

3. The applicable box is checked below:

I. ☑ **Original Application (Track One) - Prioritized Examination under § 1.102(e)(1)**

i. (a) The application is an original nonprovisional utility application filed under 35 U.S.C. 111(a). This certification and request is being filed with the utility application via EFS-Web.

---OR---

(b) The application is an original nonprovisional plant application filed under 35 U.S.C. 111(a). This certification and request is being filed with the plant application in paper.

ii. An executed inventor's oath or declaration under 37 CFR 1.63 or 37 CFR 1.64 for each inventor, or the application data sheet meeting the conditions specified in 37 CFR 1.53(f)(3)(i) is filed with the application.

II. ☐ **Request for Continued Examination - Prioritized Examination under § 1.102(e)(2)**

i. A request for continued examination has been filed with, or prior to, this form.
ii. If the application is a utility application, this certification and request is being filed via EFS-Web.
iii. The application is an original nonprovisional utility application filed under 35 U.S.C. 111(a), or is a national stage entry under 35 U.S.C. 371.
iv. This certification and request is being filed prior to the mailing of a first Office action responsive to the request for continued examination.
v. No prior request for continued examination has been granted prioritized examination status under 37 CFR 1.102(e)(2).

Signature /Paul J. Palinski/	Date June 20, 2022
Name (Print/Typed) Paul J. Palinski	Practitioner Registration Number 71,080

Note: *This form must be signed in accordance with 37 CFR 1.33. See 37 CFR 1.4(d) for signature requirements and certifications. Submit multiple forms if more than one signature is required.**

☑ *Total of 1 forms are submitted.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

INFORMATION DISCLOSURE STATEMENT

Applicant submits this statement in accordance with its duty of disclosure under 37 C.F.R. §§ 1.56, 1.97, and 1.98. The submission made herewith is in no way intended as an admission that the cited items constitute material prior art or otherwise would render the claims unpatentable in any way. The submission also is in no way intended to substitute for the Examiner's own independent investigation.

Form PTO/SB/08a is submitted herewith. Copies of foreign patent documents and non-patent literature have not been provided due to their presence in the parent application to this application (see MPEP 609.02(A)(2)), and Applicant notes that this section requires the Examiner to consider all of the references previously submitted to the USPTO even if not listed in any Information Disclosure Statement filed in this application. Applicant is resubmitting these references on the attached form PTO/SB/08a so that all of the references are listed on the face of the patent. However, to the extent that any references have been inadvertently overlooked, or otherwise are not resubmitted on this form, Applicant respectfully requests consideration of the previously submitted references as is set forth in MPEP 609.02(A)(2) and inclusion of such references on the face of the patent. Applicant respectfully solicits the Examiner's consideration of the cited references and entry thereof into the record of this application.

This Information Disclosure Statement is being submitted prior to the mailing of a first Office Action or Notice of Allowance. No fees are believed to be due; however, if any fee is due with the filing of this paper, please charge the amount to Deposit Account 50-1097.

Amendments to the Claims

1) – 9) (Cancelled)

10) (New) A beverage system for producing a beverage, comprising:

a portion capsule comprising: a foil lid sealed to a base element having a cavity within which a beverage raw material is provided, the base element comprising a circumferential flange having a top side to which the lid is attached and a bottom side with a printed optically detectable identifier located on the bottom side, the optically detectable identifier includes a surface having at least two areas which differ in their reflection properties, and

a beverage machine comprising: a detector to read the identifier, a media chute configured to receive and support the portion capsule, and a pump controlled to push water into the portion capsule only upon a determination that the read identifier agrees with a stored reference,

wherein the base element has a wall region with an electrically conductive section and radially spaced and vertically oriented drawn grooves, the cavity has radially spaced and vertically oriented drawn ribs.

11) (New) The beverage system according to claim 10, wherein the beverage machine comprises a pair of holding arms for engaging the portion capsule.

12) (New) The beverage system according to claim 11, wherein the holding

arms engage opposing sides of the portion capsule.

13) (New) The beverage system according to claim 10, wherein the water is pushed into the portion capsule along a central axis that is perpendicular to the flange of the portion capsule.

14) (New) The beverage system according to claim 13, wherein the beverage machine comprises a mandrel that pierces the lid in a region that is offset from the central axis.

15) (New) The beverage system according to claim 10, wherein the beverage machine is operable to pierce the lid in a region that is offset from a central axis of the portion capsule.

16) (New) The beverage system according to claim 10, wherein the electrically conductive section is located all over the base element and the portion capsule includes a barrier layer to prevent moisture or aroma from escaping out of the portion capsule.

17) (New) The beverage system according to claim 16, wherein the portion capsule is assigned to a group of portion capsules that are suitable for the beverage machine, and if the portion capsule is not appropriate then the beverage machine will not operate.

18) (New) The beverage system according to claim 17, wherein the optically detectable identifier includes a metallic surface.

19) (New) The beverage system according to claim 14, wherein the beverage machine comprises a seal that is configured to bear against a top side of the lid in a region between a peripheral edge of the lid and the region of the lid that is pierced by the mandrel.

20) (New) The beverage system according to claim 18, wherein the beverage machine comprises a seal that is configured to bear against a top side of the lid in a region between a peripheral edge of the lid and the region of the lid that is pierced by the mandrel.

21) (New) The beverage system according to claim 20, wherein the media chute is configured to receive and support the portion capsule so that the portion capsule is in opposing contacting relation with the seal.

22) (New) The beverage system according to claim 16, wherein the optically detectable identifier is located on a side wall of the base element.

23) (New) The beverage system according to claim 14, wherein the optically detectable identifier has a plurality of reflective zones, the portion capsule is free of a filter, the portion capsule is made of metal, and the optically detectable identifier includes

a repeat pattern.

24) (New) The beverage system according to claim 21, wherein the optically detectable identifier has a plurality of reflective zones, the portion capsule is free of a filter, the portion capsule is made of metal, the optically detectable identifier includes a repeat pattern, and the optically detectable identifier extends around a central axis of the base element.

25) (New) The beverage system according to claim 22, wherein the optically detectable identifier has a plurality of reflective zones, the portion capsule is free of a filter, the portion capsule is made of metal, the optically detectable identifier includes a repeat pattern, the optically detectable identifier extends around a central axis of the base element, and the base element is deep drawn.

26) (New) The beverage system according to claim 10, wherein the pump is controlled to not push heated water into the portion capsule upon a determination that the read identifier does not agree with the stored reference.

27) (New) The beverage system according to claim 14, wherein the pump is controlled to not push heated water into the portion capsule upon a determination that the read identifier does not agree with the stored reference.

28) (New) The beverage system according to claim 21, wherein the pump is

controlled to not push heated water into the portion capsule upon a determination that the read identifier does not agree with the stored reference.

29) (New) The beverage system according to claim 24, wherein the pump is controlled to not push heated water into the portion capsule upon a determination that the read identifier does not agree with the stored reference.

REMARKS

Amendment to the Specification

A Substitute Specification is provided herewith, by way of a Marked-Up Copy and a corresponding Clean Copy. No new matter has been added. The specification amendments are submitted to put the application into better condition/form for US examination. Entry of the Substitute Specification is respectfully requested.

Amendment to the Drawings

Replacement Sheets are provided herewith. No new matter has been added. The amendments on the Replacement Sheets are submitted to put the application into better condition for US examination. Entry of the Replacement Sheets is respectfully requested.

Amendment to the Claims

Claims 1-9 are cancelled and claims 10-29 are new. No new matter has been added. Entry of the claim amendments is respectfully requested. Applicant believes these claims are patentable. Accordingly, Applicant submits that the present application is in condition for allowance, and respectfully requests that the Examiner pass the case to issue at the earliest convenience.

Invitation for Telephonic Interview

Should the Examiner have any questions or comments about this application, the Examiner is kindly encouraged to contact Applicant's representative Paul Palinski via direct dial telephone at 248-309-3045.

PORTION CAPSULE HAVING AN IDENTIFIER

Cross Reference to Related Applications

This application claims benefit from International Application No. PCT/EP2011/003677, filed on July 22, 2011, entitled PORTION CAPSULE HAVING AN IDENTIFIER, which is hereby incorporated by reference in its entirety.

Field

[0001] These teachings relate to a beverage system for making a beverage that includes a portion capsule and a beverage machine.

Background

[0002] The present invention relates to a portion capsule for producing a beverage, comprising a base element having a cavity in which a beverage raw material is provided and which is closed by a membrane fastened to the base element.

[0003] Such capsules are well known and are being launched onto the market in abundant variety. Since these capsules are often quite similar, it is possible that the manufacturer's capsules are used in a coffee machine designed by another manufacturer, although they are not suited for it. This may result in significant security issues and/or the coffee machine may be damaged.

[0004] The object of the present invention is therefore to provide a portion capsule

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 91 of 598

which only is suitable for a specific coffee machine.

Summary

[0005] The object is accomplished according to the present invention by a portion capsule for producing a beverage, comprising a base element having a cavity in which a beverage raw material is provided and which is closed by a membrane fastened to the base element, wherein it has an identifier, which allows to individualize the respective portion capsule.

[0006] The present invention relates to a capsule for producing a beverage or foodstuff, comprising a base element having a cavity in which a beverage raw material is provided. Such capsules are, for example made of plastic, natural materials and/or biodegradable materials and substantially have a base element, in particular a deep-drown base element, i.e. it is substantially designed frustoconically or cylindrically. The beverage raw material is arranged within the portion capsule's cavity and is extracted and/or dissolved in a liquid, in particular water. After the beverage raw material has been filled into the cavity the base element is usually sealed by a membrane. In particular the membrane is localized on the opposite side of the base element's bottom. The membrane can be made of the same or different material as the base element and is substantially attached to the base element using a sealing and/or an adhesive bonding. Additionally, the cavity could contain one or several built-in elements, such as, for example a filter, a non-woven, a felt, a shut-off device and/or something similar to those. For the case that a non-woven and a felt are arranged within the cavity, they are interconnected preferably. The non-woven and/or the felt can be made of several layers in such a way that the layers may differ in the kind of its starting material and/or its preparation. Moreover, the membrane and/or the bottom

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 92 of 598

can be provided with a plurality of recesses (holes).

[0007] According to the present invention, it is provided that the portion capsule has an identifier that allows to individualize the respective portion capsule. In the context of this invention individualizing means that the respective portion capsule can be assigned to a group of capsules that are suitable for the coffee machine preferably. It is not necessary that the coffee machine is able to specify and/or identify the portion capsule. In fact, it is much more important that the coffee machine associates the portion capsule with a group of portion capsules, which is suitable for the coffee machine. In particular, individualizing means that those portion capsules that are not appropriate for the coffee machine cannot be inserted into and/or directly fall through the holder, which is designed for the portion capsules in the coffee machine, and/or the coffee machine operates only with the corresponding portion capsules. Preferably a sensor/detection system handles the identifier and compares it with a stored reference substantially. Preferably, the coffee machine, in particular the water-providing- pressure pump, will be activated if the detected identifier matches with the reference. Otherwise, the coffee machine will not start operating. Preferably the detection system is placed in the region of the coffee machine's media chute designed for the portion capsules. According to another preferred embodiment of the invention, the detection system may be placed in the region of the brewing chamber. Another possible embodiment of the invention provides that the identifier prevents portion capsules from inserting into the coffee machine. Alternatively, or additionally, means, in particular mechanical means, more preferably, one or more gearwheels, may be added to the media chute in order to guarantee that incorrect portion capsule cannot be inserted into the coffee machines by passing the media chute.

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 93 of 598

[0008] Preferably, the identifier is composed of surface areas having different optical properties, for example reflection. These surfaces may be localized on the membrane, the side wall and/or the bottom of the portion capsules. Preferably, the portion capsule has at least two areas which differ in their optical properties, for example the reflection characteristics.

[0009] The detection of a recess and/or a bulge is also preferred. Preferably, recess and bulges alternate and/or at least two recesses or bulges are separately placed from each other. Especially it is possible that the recess and/or the bulge form a gearwheel that is attached to the outer border and/or at least partially extends to the wall region of the portion capsule. The recess and/or bulge may be produced by any shaping method, for example by deep drawing, preferably.

[00010] Furthermore, the recess may be realized by removing material. In particular, the material's removal can be accomplished by punching or using a laser on condition that this processing does not damage a barrier layer placed in the portion capsule's material, which prevents moisture or aroma from escaping out of the portion capsule and/or water vapor or oxygen enters the capsule. The reading of the identifier, which is encoded in the recess and/or bulge, may be a result from a mechanical and/or optical method, for example. Alternatively, or additionally, the identifier can be used to avoid that the portion capsule is inserted into the coffee machine. This applies in particular to the media chute. For example, it is possible to design a portion capsule comprising a ring gear that is placed on its circumference and is compatible with another ring gear,

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 94 of 598

which is placed in the media chute. If the media chute's ring gear only revolves for a corresponding ring gear of the portion capsule and its revolving allows the portion capsule to pass, only portion capsules equipped with the proper ring gear will pass the insertion lock.

[00011] According to a further subject matter of a preferred development of the present invention, the identifier may be included in the membrane. Preferably, the identifier is a layer or partial layer of the membrane. Such identifiers may be an optically detectable material, for example a fluorescent material. Furthermore, the identifier may be designed with layers made of metal or ferrous metal or stripes made of metal or ferrous metal in or on the membrane, respectively.

[00012] Preferably the identifier is a machine-readable imprint. This is realized with a print in food approved color, preferably. Fluorescent materials like paper or print materials, whose optical properties change under the influence of temperature, are favored also. Preferably the print is a barcode, a logo or a repeat pattern.

[00013] According to a further subject matter of a preferred development of the present invention, the identifier is an electrically conductive section, which can be placed all over the portion capsule, but is localized on the side wall, the edge and/ or the floor preferably. The electrically conductive section, which is inserted into the coffee machine, can become part of an electric circuit, and causes therefore a measurable change, which leads to the identification of the respective portion capsule. In a further preferred embodiment, the identifier is a section made of a ferromagnetic material.

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 95 of 598

[00014] Another construction version favors a RFID chip being the identifier.

[00015] If the portion capsule is customized according to the invention, portion capsules that are not in line with the coffee machine will be prevented from inserting into the coffee machine. Furthermore, it is possible that the identifier allows to identify the portion capsule located in the brewing chamber in such a way that the production process of beverage or food may be controlled, for example by adjusting the temperature, the pressure and/or the amount of water.

[00016] According to a further subject matter of a preferred development of the present invention, the portion capsule's material is weakened in the bottom area caused by a selective material removal, for example by using a laser. The weakening is provided for piercing the portion capsules using a mandrel. This procedure is needed for the beverage's preparation. Since the material is weakened in the section, which is treated with a laser and is supposed to be pierced using the mandrel, the degree of necessary force for piercing the portion capsule is reduced. The mandrel of such coffee machines is usually equipped with a force limitation that limits the force, which is dedicated for pressing the mandrel against the portion capsule's bottom. This preparation avoids that portion capsules having no appropriate weakening can be used in such a coffee machine. Consequently, the weakening represents another kind of identifier.

[00017] According to a further subject matter of a preferred development of the present invention, the portion capsule has an edge region, which is preferably attached to

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 96 of 598

the base element. Preferably, the edge is located opposite of the base element's bottom area. After the raw material has been filled in the portion capsule, a membrane can be attached to this edge region, for instance. Moreover, the edge can also designed for guiding the portion capsule into the chute in order to position the portion capsule in the brewing chamber properly. Simultaneously, it is possible to use the surface of the edge for stopping and/or sealing.

[00018] Preferably provision is made for the portion capsule to have means for fit locking, friction locking and/or detection in the edge region. The means for fit locking and/or friction locking may be used to activate a complementary mechanism, which is located in the coffee machine, in order to allow inserting the portion capsule into the coffee machine and/or starting a sensor, like a gearwheel, that transmits a signal to a control unit depending on whether the portion capsule corresponds to the coffee machine or not. Alternatively, or additionally, a detector may identify the mean for fit locking, friction locking and/or detection in order to check that the portion capsule is suitable to the respective coffee machine.

[00019] Preferably, the means for fit locking, friction locking and/or detection is a gearwheel or a gearwheel segment, which are located, in particular, in the outer area of the edge region. The teeth of the gearwheel or the gearwheel segment may be shaped in any commonly used form, which is known, for example, by an expert from gear manufacturing. Preferably, it is provided that these teeth are triangular, rectangular, square, or wavy.

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 97 of 598

[00020] Preferably, there is a sealing surface, that is arranged on the interior side relative to the gearwheel or the gearwheel segment.

[00021] Another and preferred state-of-the-art technology is a portion capsule for producing a beverage, comprising a base element substantially designed frustoconically or cylindrically, having a cavity in which a beverage raw material is provided and which is closed by a membrane fastened to the base element with the base element having a wall region and the base element having a bottom area, which is preferably located opposite to the membrane, with the wall region having several grooves and the grooves which are located between membrane and bottom area covering the wall region along its height at least partially. The grooves may be also located in the edge region, in particular on the outer area of the edge region.

[00022] This portion capsule has the advantage over the portion capsule according to the state-of-the-art technology that, for instance, the grooves reinforce the base element's wall region. On the one side, these grooves make the portion capsule more stable towards mechanical forces and prevent the portion capsule from deformation and buckling, in particular. The arrangement of the grooves, which are located at the wall region, additionally improves the performance of the portion capsule while the extraction liquid flows through it in the brewing chamber, since the arrangement of the grooves, in particular those partially expending over the wall region between membrane and bottom area, increase quality and reliability of the extraction process significantly. According to the invention another advantage is that the base element's thickness can be reduced, because the use of grooves improves the physical

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 98 of 598

stability. The production of the portion capsule is therefore much less expensive and more environmentally friendly. On the other side, the grooves reduce or avoid the contact between the portion capsule's wall region and the wall of the brewing chamber. As a result, ejecting or removing the portion capsule from the brewing chamber is made easier. Another advantage of using a plurality of grooves is that the stream of the extraction liquid, which flows along the base element in the cavity, can be optimized by choosing a grooves' structure that is able, for example, to generate on the one hand a better or stronger turbulence in the extraction liquid or on the other hand a more uniform (laminar) flow of the extraction liquid, in the wall region. The control of the liquid may be obtained by the structure of the grooves itself or by using simple means additionally. A stronger turbulence compared to the one known in the state-of-the-art has the advantage that no unintended and casual main streams are formed in the raw materials. Instead, the extraction liquid equally flows through the raw material in all of the volume. Thus, the extraction process is much more efficient and can be controlled more precisely and reproducibly.

[00023] In particular, the raw material may be coffee powder (especially ground roasted coffee), chocolate powder, milk powder, tea, or the like. Alternatively, it is conceivable that the raw material is a beverage's extract, such as instant coffee for example.

[00024] In particular, the grooves are recesses and bulges, which are preferably directed along a main extension and are preferably extended along the wall portion or the periphery of the edge region. More preferably, the grooves are formed as webs and/or

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 99 of 598

notches. A gearwheel, for instance, may be obtained by the grooves. Therefore, the grooves are part of the base elements' wall, optionally located on the inner side facing to the cavity and/or on the outside facing away from the cavity.

[00025] According to a preferred embodiment of the present invention, it is provided that the grooves form an identifier that allows individualizing the portion capsule. In the context of this invention individualizing preferably means that the respective portion capsule can be assigned to a group of capsules that are suitable for the respective coffee machine or the machine producing a beverage. It is not necessary that the coffee machine or the device for producing a beverage is able to specify and/or identify the portion capsule. It is more important that the device for producing a beverage, in particular a coffee machine, associates the portion capsule with a group of portion capsules, which is appropriate for the respective device for producing a beverage, in particular a coffee machine. In particular, individualizing means that those portion capsules that are not appropriate for the coffee machine (or the device producing the beverage) cannot be inserted into and/or directly fall through the holder, which is designed for the portion capsules in the coffee machine (or the device producing the beverage), and/or the coffee machine (or the device producing the beverage) operates only with corresponding portion capsules ("proper portion capsule"). In particular, individualizing means that the coffee machine or the device producing the beverage will not operate properly in the intended use, if the used portion capsule is not customized according to the invention. Preferably, a sensor/detection system, attached to the coffee machine or the device producing the beverage, records the identifier and substantially compares it with a stored reference. In particular, it is possible that such an identification process is based on

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 100 of 598

a mechanical fitting, especially a fitting of a gearwheel or of a contour comparable with a gearwheel, which is attached to the device producing the beverage or the coffee machine and interacts with the portion capsule. It is preferred that the device for producing the beverage or the coffee machine only will operate, if the identifier matches to the reference or the mechanical fittings match with each other. In this case the device for producing the beverage particularly starts to operate, especially activates a pressure or water pump. The mean for detection or mechanical fitting is preferably located in the region of the media chute or in the region of the device for producing the beverage. Alternatively, the identifier or the mechanical fitting may avoid that an unsuitable portion capsule is inserted into the device for producing the beverage. A portion capsule, which is designed in accordance with the invention, makes it possible that a portion capsule that is not designed for the device for producing a beverage cannot be inserted into it. Additionally, the identifier allows that the device for producing the beverage, especially the coffee machine, may specify the sort of the portion capsule and thereby control the production process of beverage and food by adapting, for example, the pressure, the temperature and/or the amount of water.

[00026] According to a further preferred embodiment of the present invention, it is provided that at least a part of the grooves and at least in a subarea parallel to the main plane of the membrane is gearwheel shaped.

[00027] According to the present invention, it is an advantage that it is possible to increase the stability of the portion capsule's wall region, to realize improved turbulences of the extraction liquid and thereby to improve the extraction's process under the same

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 101 of 598

conditions, for example, such as material thickness and the like. Another advantage is that it is easy to generate a mechanical identifier or a mechanical fitting that matches with a fitting tool that belongs to the device for producing a beverage. According to the invention it is an further advantage that, for example, a gearwheel, which is attached to the device for producing a beverage and is, for example, located in the region of the media chute or similar, can possibly interacts with the gearwheel's contour of the portion capsule. In this way it is possible to generate a mechanical fitting that allow to individualize the portion capsule as a proper one and/or to specify the sort of portion capsule and/or to rotate the portion capsule about an axis of rotation, that is perpendicular to the membrane's main plane, by using the gearwheel's arrangement. Such an embodiment of the invention makes it possible that the portion capsule is always opened with the device for producing a beverage on the same spot (with respect to its angular position) and therefore the raw material is extracted on the same manner. Moreover, the grooves prevent the portion capsule from being inserted into the coffee machine.

[00028] In a preferred version of the invention, it is provided that there is a flange/edge region being averted from the bottom region, for fixing the membrane to the base element, where in the wall region between flange/edge region and bottom region preferably has a border and the grooves are being preferably extended to this border.

[00029] Because of this it is another advantage according to the invention that on the one hand the wall region can be constructed in a stable and reinforced manner and on the other hand the gearwheel shaped contour of the grooves, located at the wall region, is able to absorb a relative high load. With that it is possible that the portion

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 102 of 598

capsule can be rotated easily and without any damaging of the portion capsule within the device for producing a beverage.

[00030] Preferably, the base element's diameter is enlarged in the border's region compared to the wall region, which range from the border to the bottom region.

[00031] This gives rise to the advantageous possibility to stack portion capsule or portion capsules' base elements easily and robustly.

[00032] Moreover, it is preferred that at least a part of the grooves are gearwheel shaped and at least a plane, which is at least partially gearwheel shaped, is parallel to the membrane in such a way that the gearwheel shaped contour expands over the borders or the flange/edge region.

[00033] Further preferred versions of the present invention relate to portion capsules that implement one or more of the following characteristics:

- the base element tapers in the direction of the flange in the border's region,
- the grooves directed toward the bottom region expand over the border's region,
- the grooves approximately cover 20% -80%, preferably 40% - 60% of the wall region, which is placed between the border and the bottom region,
- the grooves are constructed in such a way that the wall region is reinforced and/or the grooves causes an extraction liquid's turbulence in the cavity.

[00034] Other preferred versions of the present invention relate to portion capsules

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 103 of 598

that are manufactured in such a way that the ratio of the diameter of that wall region of the base element which adjoins the flange to the diameter of the flange is between 0.85 and 0.89, and in particular substantially 0.87.

[00035] In a preferred version, the wall region's diameter, which is adjacent to the flange, is 39 millimeters and the flange's diameter is 45 millimeters. Another advantageous version of the invention prefers a base element having a thicker wall region in the border's region compared to the wall region between bottom region and flange. Since the portion capsule's design, which contains grooves in the wall region, improves its stability, it is possible to save material by manufacturing the portion capsule and therefore to reduce cost and energy required for manufacturing the portion capsules.

[00036] According to the invention it is further provided that a filter element is arranged into the cavity. Such a filter element divides the cavity into a first region for accommodating the beverage raw material and into a second region for accommodating a beverage extract. In particular, it is provided that the filter element is made of a non-woven material.

[00037] According to a further subject matter or a preferred development of the present invention the portion capsule according to the invention is intended for the preparation of a hot beverage. In the following the invention is explained based on the Figures 1 - 22. These explanations do not restrict the general idea of the invention.

Detailed Description

[00058] **Figures 1A and 1B** show a portion capsule 1 comprising a base element 2 that has a wall region 2.1 and a bottom area 2.2. The wall region 2.1 and the bottom area 2.2 define a cavity 3, which may include the raw material and perhaps a built-in element. After filling, the cavity 3 is sealed by a membrane 4, which is preferably attached to the edge region 2.4 of the base element using seal or glue. This portion capsule can be inserted into a brewing chamber 12, with a liquid, in particular water, flowing through it. During this process, the raw material is extracted or dissolved and therefore the beverage is produced. According to the invention the portion capsule has only one identifier that allows to determine whether the respective portion capsule goes with the coffee machine's brewing chamber 12 and the parameters for processing are chosen properly. If it is not the case, significant security issues arise. Inserting the wrong portion capsule, for example, endangers the brewing chamber's tightness. In this case hot water can be discharged under high pressure and therefore compromise the user's safety. Otherwise, it is also possible that inserting the wrong portion capsule damages the coffee

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 107 of 598

machine. In this example the identifier is represented by several raised areas 8, which differ in reflection properties from the sections between the raised areas. As shown by the arrows the bulges are passed by a mean for detection 13 (here: an optical detector) that is able to differentiate between the unequal sections 5, 6 having different optical properties such as, for example, reflection. Switching between the different sections or the number of bulges represents the identifier. After the identifier has been read out the identifier is compared to a stored reference. If the identifier agrees with the reference, the coffee machine will start operating. Particularly the pump, which is for example responsible for pushing hot water through the brewing chamber, will not start operating, if the identifier does not agree with the reference.

[00059] All the remarks concerning the identifier apply to all the examples.

[00060] **Figures 2A and 2B** show another embodiment of the portion capsule 1 according to the invention. The portion capsule 1 comprises a base element 2 that has a wall region 2.1 and a bottom area 2.2. Here the portion capsule 1 has a barcode 50 placed in the area of the membrane's 4 top surface. This barcode may be printed by material removal or may be generated by a medium that is integrated in the foil and can be detected optically such as a fluorescence agent. Alternatively, metal rings may be part of the foil or attached to the foil. The barcode's section may be made of a ferromagnetic material. As shown by the arrow 15 the barcode 50 alternatively can be attached to the base element's edge region being averted from the membrane 4. Such a barcode is read out by a detector 13 placed, for example, in the media chute. The barcode represents the identifier according to invention.

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 108 of 598

[00061] **Figures 3A and 3B** show another embodiment of the portion capsule 1 according to the invention. In the present case the identifier comprises recesses and bulges 7, 8, which result from material removal or reshaping the portion capsule as shown here by the example of the portion capsule's wall 2.1. In the present case, recesses and bulges interact with a means for detection 13, which operates like a key, wherein the coffee machine only start operating, when all elements 14 are placed in the respective recess 7. Therefore, an electric circuit may be changed or especially closed.

[00062] **Figure 4** shows an embodiment of the portion capsule being substantially identical to the embodiment illustrated in Figure 1. As an alternative version of the invention, the figure additionally shows that the unequal sections 5, 6 differing in terms of optical properties can be attached to the cover foil, for example in the form of a barcode.

[00063] **Figure 5** shows an embodiment of the portion capsule being substantially identical to the embodiment illustrated in Figures 3A and 3B that includes recesses 7 and bulges 8. Again, the recesses represent the key bit. The coffee machine only will start operating, if the recesses interact with the corresponding bulges and therefore an electric circuit is changed respectively. The placement of such a system is not restricted to the brewing chamber. For instance, the system may be placed in the portion capsule's media chute.

[00064] **Figure 6** shows a version of the invention that includes a base element 2 and an electric material forming a surrounding ring 2.3, which preferably has a raised

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 109 of 598

form. The electrically conductive material is scanned by means for detection 13 having electric sliding contacts, which are placed in the media chute and form electric contacts of an electric circuit, while the portion capsule is inserted.

[00065] **Figure** 7 shows an embodiment of the portion capsule being substantially identical to the embodiment illustrated in Figure 6, in which it is provided that the ring area has reflective 21 or mat 22 sections, for example in form of a covering, and allows a read-out by means for detection 13 for optical detection, which are placed in the media chute and are part of a control current, while the portion capsule is inserted.

[00066] **Figure 8** shows a relative broad and raised ring 2.3 which represents the identifier. The media chute is equipped with a corresponding vacancy that tests whether the portion capsule has the proper identifier. The broad ring is scanned, for example, by means for detection 13 having mechanical sensors, which are placed in the media chute and close the contacts of an electric circuit, while the portions capsule is inserted.

[00067] **Figure 9** shows another embodiment of the portion capsule according to the invention. In the present case an electrically conductive coat 10 is integrated in the edge region's back and is scanned by electric sliding contacts, which are placed in the media chute and form electric contacts of an electric circuit, while the portion capsule is inserted.

[00068] **Figure 10** shows another embodiment of the portion capsule according to the invention. In the present case the portion capsule has an electrically conductive coat

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 110 of 598

10 at the bottom area 2.2 such as a conductive varnish layer or an aluminum foil. The coat is scanned by means for detection 13 having electric sliding contacts, which form electric contacts of an electric circuit, while the portion capsule is inserted.

[00069] **Figure 11** illustrates a version of the portion capsule having also an electrically conductive coat 10 that is placed on its bottom 2.2 and is identified by a means for detection 13 having a metal sensor, which is placed in the chute and, for example, detects inductively, while the portion capsule is inserted.

[00070] The embodiment of the invention shown in **Figure 12** has a built-in element made of metal (here a strainer 19) that is recognized as identifier by a means for detection 13 having a metal detector.

[00071] The version of the invention shown in **Figure 13** includes a ferromagnetic material 20 placed at the portion capsule' bottom. The identifier is scanned, by means for detection 13 for example, by a magnet, which is placed in the chute, while the portion capsule is inserted. The ferromagnetic material acts as identifier.

[00072] **Figure 14** shows another embodiment which includes a barcode placed in the region of the cover foil. The portion capsule includes a flange 17.

[00073] According to the embodiment shown in **Figure 15** a metallic ring 11 is integrated in the wall region 2.1 and closes means for detection 13 having an electric circuit placed in region of the brewing chamber.

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 111 of 598

[00074] **Figures 16A and 16B** show another embodiment of the portion capsule 1 according to the invention. The illustrated portion capsule features a base element 2 that is basically conical- shaped in the present case and has a bottom region 2.2 and a wall region 2.1. It is provided that the base element contains the raw material and, if necessary, build-in elements like a filter as illustrated here. The expert knows that the build-in element may also include other build-in elements. A flange 17 /edge region 2.4, which is preferably circular and, for example, may be used for sealing a cover foil 4 to it, is attached to the end of the base element, which is placed opposite to the bottom. The flange/edge region has means for fit locking, friction locking and/or detection 2.4.2 in the outer area (outer circumference). As especially shown in the Figures 17a - 17c the means for fit locking, friction locking and/or detection 2.4.2 is, in the present case, a gearwheel that is formed by several recesses/bulges evenly arranged in the edge region. Preferably, it is provided that the edge region has a sealing surface 2.4.1, which sealingly interacts with the seal 31 attached to the brewing chamber 12, on the interior side of the gearwheel. The sealing 31 makes sure that the water coming from a water inlet 28 flows through the portion capsule by passing an opening, which has been made by a mandrel 29, than around it.

[00075] **Figures 17A, 17B, and 17C** show different embodiments of the means for fit locking, friction locking and/or detection 2.4.2. According to the version shown in Figure 17A, the gearwheel has forty-five teeth. According to the version shown in Figure 17B or 17C, the gearwheel has twenty-two or twenty-nine teeth, respectively. The expert knows that the manufactured teeth can be shaped arbitrarily. All Figures 17A, 17B, and

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 112 of 598

17C demonstrate how the portion capsule 1 can be held by a part of the brewing chamber 12 using two holding arms 30. The holding arms interact with the means for fit locking, friction locking and/or detection 2.4.2. If they are not available, the holding arms will not hold the portion capsule and the portion capsule will not be inserted into the brewing chamber and will fall through it into a dropping box instead. The portion capsule has a base element 2, a wall region 2.1, a bottom area 2.2, a sealing surface 2.4.1, and an edge region 2.4.

[00076] **Figure 18** shows the means for fit locking, friction locking and/or detection 2.4.2 along with mean for fit locking 24, which is attached to the coffee machine and is represented by a pinion here. It is provided that the mean for fit locking 24 is placed in the media chute or insertion shaft 26 of an insertion shaft housing 23 having a port for inserting the portion capsule in the coffee machine. The distance between the inner wall 25 of the portion capsule 1 and the mean for fit locking 24 represented by the pinion 24 are designed in such a way that the portion capsule only will pass the port, if the means for fit locking, friction locking and/or detection 2.4.2 is formed complementary to the teeth of the mean for fit locking 24 represented by the pinion. Only in this case the portion capsule rotates the mean for fit locking 24 represented by the pinion 24 while it falls. Both rotating and falling are represented by arrows in the figure. The portion capsule needs the rotation for passing the media chute's port and falling in the intended position afterwards. If the portion capsule has no or wrong mean of fit locking, it will be impossible to place the portion capsule by passing the media chute in the intended position. Additionally, or alternatively, it is provided that the mean for fit locking 24 represented by the pinion has a pick-up that detects the rotary movement and transmits it to a control unit. If the rotation

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 113 of 598

at least corresponds a defined rotating element, the control unit will activate, for example, the brewing unit. The expert knows that the portion capsule's border may include means for friction locking that interacts with a mean, for example an edge, and shift it in such a way that the shift is detected and therefore the brewing chamber is activated. The portion capsule 1 has a cover foil 4 and a sealing surface 2.4.1.

[00077] The expert moreover knows that a sensor, being for example a camera, which detects the form of the means for fit locking, friction locking and/or detection 2.4.2, may be installed in the media chute. In the present case the form and/or the distance between the teeth may be detected. If the proper portion capsule was inserted, a resulting signal could be transmitted to a control unit, which activates the brewing chamber.

[00078] **Figure 19** schematically shows a view of another portion capsule's version according to an embodiment of the present invention. **Figure 20** illustrates the same portion capsule from a different point of view schematically. Figure 19 shows the front view of the portion capsule. Figure 20 shows the portion capsule viewed from an angle below. In all figures the portion capsule is labeled with the reference sign 1. The portion capsule substantially has a frustoconically shaped base element 2, which is formed similar to a pot and encloses a cavity 3. The cavity 3 is sealed by a membrane 4. Since the viewing direction of Figure 19 is essentially parallel to the plane, in which the membrane is located, the membrane is at the upper edge of the portion capsule. In particular, the base element 2 comprises a soft, semi-rigid or rigid plastic material which is deep-drown, preferably. The membrane comprises a foil made of plastic material or aluminum. Preferably the base element has a circumferential mounting flange 17 in the region of the

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 114 of 598

membrane, with the membrane and the mounting flange 17 being firmly bonded, in particular by welding or gluing. Preferably a filter element, which is not specifically depicted in the figures, is placed within the base element 2. For instance, the filter element is made of thermoplastic resin such as, for example, polypropylene. The filter element could also be made of a non-woven material such as, for example, thermoplastic resin. Preferably the filter element divides the cavity 3 in two sections. It is provided that the first section can be filled with a raw material and the second section can be filled with and particularly collect a beverage's extract, which is not shown, during the extractions process. Both sections are not illustrated individually.

[00079] The portion capsule is intended for inserting into a brewing chamber or a device for producing a beverage, which is not shown here. In particular such a device for producing a beverage is a coffee machine. The device for producing a beverage could be also a machine that produces a tea drink, a chocolate drink or any other beverage. Preferably an extraction liquid, which is particularly water or hot water, is brought under high pressure into the brewing chamber of the device for producing a beverage. The extraction liquid interacts with the raw material of the beverage in such a way that an extract of a beverage or a beverage is generated. In particular the filter element is utilized as a strainer for the extract of a beverage.

[00080] According to the invention, the base element 2 has a wall region 2.1 and a bottom area 2.2. The wall region 2.1 basically ranges from the flange 17 to the bottom region 2.2. Several grooves 32 are placed in the wall region. In particular these grooves are keyways that are integrated in the wall region 2.1 and are facing the cavity 3 and range

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 115 of 598

from the flange 17 to the bottom region 2.2 (i.e. they run perpendicular according to Figure 19). According to the invention provision is made for the grooves 32 to be extended vertically across the wall region, i.e. they run straight from the flange 17 to the bottom region 2.2, in which it is not necessary that they are extended over the whole length. The grooves are formed according to the invention in such a way that the wall region is reinforced or stiffened due to the grooves 32. Moreover, the plurality of the grooves 32, which are distributed over the wall region 2.1, realize an adhesion between wall region 2.1 and the brewing chamber's wall of the device for producing a beverage after the extraction process. This makes it easier to eject the portion capsule from the brewing chamber automatically. The portion capsule's version represented in Figure 19 comprises a circumferential border 16 that is placed at the wall region 2.1 ranging from the flange 17 to the bottom area 2.2, namely adjacent to the flange 17 facing towards the bottom area 2.2. The border 16 has an enlarged diameter (parallel to the membrane 4) compared to the wall region's ranging from the border 16 to the bottom area 2.2. It is provided that the border's contour 16 is designed in such a manner that the border's diameter tapers towards the flange 17.

[00081] It is provided according to the portion capsule's embodiment, which is represented in Figure 19 and is in accordance with the invention, that the grooves 32 are placed in the border's region in the first part, partially range from the border 16 to the bottom area 2.2 across the wall region 2.1, in the second part and then finally end. All in all, the grooves cover, for example, around 50 % of the extension of the wall region 2.1, which ranges from the flange 17 to the bottom area 2.2, wherein one-third of the grooves' extension is placed in the border's region and two-thirds of the

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 116 of 598

grooves' extension is placed in the remaining wall region 2.1 that range from the border 16 to the bottom area 2.2.

[00082] A portion capsule 1 according to the invention is shown as sectional view along the portion capsule's extension regarding its height in **Figure 21,** i.e. the section's plane is perpendicular to the membrane's main plane. **Figure 22** also shows a portion capsule according to the invention in a sectional view portraying the sectional plane, which is parallel to the membrane's main plane. It is noticeable that the interior of the portion capsule's cavity is shown in Figure 21. The portion capsule's material or the base element's material is so thin that the implementation of grooves 32 at the exterior shown in Figure 19 leads to corresponding convexities 34 and impressions at the interior. Figure 22 particularly illustrates the gearwheel shaped contour 36 resulting from insertion of grooves in the portion capsule's 1 wall region.

Field

[0001] These teachings relate to a beverage system for making a beverage that includes a portion capsule and a beverage machine.

~~BACKGROUND~~ Background

[0002] The present invention relates to a portion capsule for producing a beverage, comprising a base element having a cavity in which a beverage raw material is provided and which is closed by a membrane fastened to the base element.

[0003] Such capsules are well known and are being launched onto the market in abundant variety. Since these capsules are often quite similar, it is possible that the manufacturer's

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 119 of 598

capsules are used in a coffee machine designed by another manufacturer, although they are not suited for it. This may result in significant security issues and/or the coffee machine may be damaged.

[0004] The object of the present invention is therefore to provide a portion capsule which only is suitable for a specific coffee machine.

~~SUMMARY~~ **Summary**

[0005] The object is accomplished according to the present invention by a portion capsule for producing a beverage, comprising a base element having a cavity in which a beverage raw material is provided and which is closed by a membrane fastened to the base element, wherein it has an identifier, which allows to individualize the respective portion capsule.

[0006] The present invention relates to a capsule for producing a beverage or foodstuff, comprising a base element having a cavity in which a beverage raw material is provided. Such capsules are, for example made of plastic, natural materials and/or biodegradable materials and substantially have a base element, in particular a deep-drown base element, i.e. it is substantially designed frustoconically or cylindrically. The beverage raw material is arranged within the portion capsule's cavity and is extracted and/or dissolved in a liquid, in particular water. After the beverage raw material has been filled into the cavity the base element is usually sealed by a membrane. In particular the membrane is localized on the opposite side of the base element's bottom. The membrane can be made of the same or different material as the base element and is substantially attached to the base element using a sealing and/or an adhesive bonding. Additionally, the cavity could contain one or

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 120 of 598

several built-in elements, such as, for example a filter, a non-woven, a felt, a shut-off device and/or something similar to those. For the case that a non-woven and a felt are arranged within the cavity, they are interconnected preferably. The non-woven and/or the felt can be made of several layers in such a way that the layers may differ in the kind of its starting material and/or its preparation. Moreover, the membrane and/or the bottom can be provided with a plurality of recesses (holes).

[0007] According to the present invention, it is provided that the portion capsule has an identifier that allows to individualize the respective portion capsule. In the context of this invention individualizing means that the respective portion capsule can be assigned to a group of capsules that are suitable for the coffee machine preferably. It is not necessary that the coffee machine is able to specify and/or identify the portion capsule. In fact, it is much more important that the coffee machine associates the portion capsule with a group of portion capsules, which is suitable for the coffee machine. In particular, individualizing means that those portion capsules that are not appropriate for the coffee machine cannot be inserted into and/or directly fall through the holder, which is designed for the portion capsules in the coffee machine, and/or the coffee machine operates only with the corresponding portion capsules. Preferably a sensor/detection system handles the identifier and compares it with a stored reference substantially. Preferably, the coffee machine, in particular the water-providing- pressure pump, will be activated if the detected identifier matches with the reference. Otherwise, the coffee machine will not start operating. Preferably the detection system is placed in the region of the coffee machine's media chute designed for the portion capsules. According to another preferred embodiment of the invention, the detection system may be placed in the region of the

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 121 of 598

brewing chamber. Another possible embodiment of the invention provides that the identifier prevents portion capsules from inserting into the coffee machine. Alternatively, or additionally, means, in particular mechanical means, more preferably, one or more gearwheels, may be added to the media chute in order to guarantee that incorrect portion capsule cannot be inserted into the coffee machines by passing the media chute.

[0008] Preferably, the identifier is composed of surface areas having different optical properties, for example reflection. These surfaces may be localized on the membrane, the side wall and/or the bottom of the portion capsules. Preferably, the portion capsule has at least two areas which differ in their optical properties, for example the reflection characteristics.

[0009] The detection of a recess and/or a bulge is also preferred. Preferably, recess and bulges alternate and/or at least two recesses or bulges are separately placed from each other. Especially it is possible that the recess and/or the bulge form a gearwheel that is attached to the outer border and/or at least partially extends to the wall region of the portion capsule. The recess and/or bulge may be produced by any shaping method, for example by deep drawing, preferably.

[00010] Furthermore, the recess may be realized by removing material. In particular, the material's ~~remove~~ removal can be accomplished by punching or using a laser on condition that this processing does not damage a barrier layer placed in the portion capsule's material, which prevents moisture or aroma from escaping out of the portion capsule and/or water vapor or oxygen enters the capsule. The reading of the identifier,

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 122 of 598

which is encoded in the recess and/or bulge, may be a result from a mechanical and/or optical method, for example. Alternatively, or additionally, the identifier can be used to avoid that the portion capsule is inserted into the coffee machine. This applies in particular to the media chute. For example, it is possible to design a portion capsule comprising a ring gear that is placed on its circumference and is compatible with another ring gear, which is placed in the media chute. If the media chute's ring gear only revolves for a corresponding ring gear of the portion capsule and its revolving allows the portion capsule to pass, only portion capsules equipped with the proper ring gear will pass the insertion lock.

[00011] According to a further subject matter of a preferred development of the present invention, the identifier may be included in the membrane. Preferably, the identifier is a layer or partial layer of the membrane. Such identifiers may be an optically detectable material, for example a fluorescent material. Furthermore, the identifier may be designed with layers made of metal or ferrous metal or stripes made of metal or ferrous metal in or on the membrane, respectively.

[00012] Preferably the identifier is a machine-readable imprint. This is realized with a print in food approved color, preferably. Fluorescent materials like paper or print materials, whose optical properties change under the influence of temperature, are favored also. Preferably the print is a barcode, a logo or a ~~rapport~~repeat pattern.

[00013] According to a further subject matter of a preferred development of the present invention, the identifier is an electrically conductive section, which can be placed

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 123 of 598

all over the portion capsule, but is localized on the side wall, the edge and/ or the floor preferably. The electrically conductive section, which is inserted into the coffee machine, can become part of an electric circuit, and causes therefore a measurable change, which leads to the identification of the respective portion capsule. In a further preferred embodiment, the identifier is a section made of a ferromagnetic material.

[00014] Another construction version favors a RFID chip being the identifier.

[00015] If the portion capsule is customized according to the invention, portion capsules that are not in line with the coffee machine will be prevented from inserting into the coffee machine. Furthermore, it is possible that the identifier allows to identify the portion capsule located in the brewing chamber in such a way that the production process of beverage or food may be controlled, for example by adjusting the temperature, the pressure and/or the amount of water.

[00016] According to a further subject matter of a preferred development of the present invention, the portion capsule's material is weakened in the bottom area caused by a selective material removal, for example by using a laser. The weakening is provided for piercing the portion capsules using a mandrel. This procedure is needed for the beverage's preparation. Since the material is weakened in the section, which is treated with a laser and is supposed to be pierced using the mandrel, the degree of necessary force for piercing the portion capsule is reduced. The mandrel of such coffee machines is usually equipped with a force limitation that limits the force, which is dedicated for pressing the mandrel against the portion capsule's bottom. This preparation avoids that portion capsules having

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 124 of 598

no appropriate weakening can be used in such a coffee machine. Consequently, the weakening represents another kind of identifier.

[00017] According to a further subject matter of a preferred development of the present invention, the portion capsule has an edge region, which is preferably attached to the base element. Preferably, the edge is located opposite of the base element's bottom area. After the raw material has been filled in the portion capsule, a membrane can be attached to this edge region, for instance. Moreover, the edge can also designed for guiding the portion capsule into the chute in order to position the portion capsule in the brewing chamber properly. Simultaneously, it is possible to use the surface of the edge for stopping and/or sealing.

[00018] Preferably provision is made for the portion capsule to have means for fit locking, friction locking and/or detection in the edge region. The means for fit locking and/or friction locking may be used to activate a complementary mechanism, which is located in the coffee machine, in order to allow inserting the portion capsule into the coffee machine and/or starting a sensor, like a gearwheel, that transmits a signal to a control unit depending on whether the portion capsule corresponds to the coffee machine or not. Alternatively, or additionally, a detector may identify the mean for fit locking, friction locking and/or detection in order to check that the portion capsule is suitable to the respective coffee machine.

[00019] Preferably, the means for fit locking, friction locking and/or detection is a gearwheel or a gearwheel~~gearwheel'~~ segment, which are located, in particular, in the outer

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 125 of 598

area of the edge region. The teeth of the gearwheel or the ~~gearwheel'~~ gearwheel segment may be shaped in any commonly used form, which is known, for example, by an expert from gear manufacturing. Preferably, it is provided that these teeth are triangular, rectangular, square, or wavy.

[00020] Preferably, there is a sealing surface, that is arranged on the interior side relative to the gearwheel or the gearwheel~~gearwheel'~~ segment.

[00021] Another and preferred state-of-the-art technology is a portion capsule for producing a beverage, comprising a base element substantially designed frustoconically or cylindrically, having a cavity in which a beverage raw material is provided and which is closed by a membrane fastened to the base element with the base element having a wall region and the base element having a bottom area, which is preferably located opposite to the membrane, with the wall region having several grooves and the grooves which are located between membrane and bottom area covering the wall region along its height at least partially. The grooves may be also located in the edge region, in particular on the outer area of the edge region.

[00022] This portion capsule has the advantage over the portion capsule according to the state-of-the-art technology that, for instance, the grooves reinforce the base element's wall region. On the one side, these grooves make the portion capsule more stable towards mechanical forces and prevent the portion capsule from deformation and buckling, in particular. The arrangement of the grooves, which are located at the wall region, additionally improves the performance of the portion capsule

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 126 of 598

while the extraction liquid flows through it in the brewing chamber, since the arrangement of the grooves, in particular those partially expending over the wall region between membrane and bottom area, increase quality and reliability of the extraction process significantly. According to the invention another advantage is that the base element's thickness can be reduced, because the use of grooves improves the physical stability. The production of the portion capsule is therefore much less expensive and more environmentally friendly. On the other side, the grooves reduce or avoid the contact between the portion capsule's wall region and the wall of the brewing chamber. As a result, ejecting or removing the portion capsule from the brewing chamber is made easier. Another advantage of using a plurality of grooves is that the stream of the extraction liquid, which flows along the base element in the cavity, can be optimized by choosing a grooves' structure that is able, for example, to generate on the one hand a better or stronger turbulence in the extraction liquid or on the other hand a more uniform (laminar) flow of the extraction liquid, in the wall region. The control of the liquid may be obtained by the structure of the grooves itself or by using simple means additionally. A stronger turbulence compared to the one known in the state-of-the-art has the advantage that no unintended and casual main streams are formed in the raw materials. Instead, the extraction liquid equally flows through the raw material in all of the volume. Thus, the extraction process is much more efficient and can be controlled more precisely and reproducibly.

[00023] In particular, the raw material may be coffee powder (especially ground roasted coffee), chocolate powder, milk powder, tea, or the like. Alternatively, it is conceivable that the raw material is a beverage's extract, such as instant coffee for

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 127 of 598

example.

[00024] In particular, the grooves are recesses and bulges, which are preferably directed along a main extension and are preferably extended along the wall portion or the periphery of the edge region. More preferably, the grooves are formed as webs and/or notches. A gearwheel, for instance, may be obtained by the grooves. Therefore, the grooves are part of the base elements' wall, optionally located on the inner side facing to the cavity and/or on the outside facing away from the cavity.

[00025] According to a preferred embodiment of the present invention, it is provided that the grooves form an identifier that allows individualizing the portion capsule. In the context of this invention individualizing preferably means that the respective portion capsule can be assigned to a group of capsules that are suitable for the respective coffee machine or the machine producing a beverage. It is not necessary that the coffee machine or the device for producing a beverage is able to specify and/or identify the portion capsule. It is more important that the device for producing a beverage, in particular a coffee machine, associates the portion capsule with a group of portion capsules, which is appropriate for the respective device for producing a beverage, in particular a coffee machine. In particular, individualizing means that those portion capsules that are not appropriate for the coffee machine (or the device producing the beverage) cannot be inserted into and/or directly fall through the holder, which is designed for the portion capsules in the coffee machine (or the device producing the beverage), and/or the coffee machine (or the device producing the beverage) operates only with corresponding portion capsules ("proper portion capsule"). In particular, individualizing

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 128 of 598

means that the coffee machine or the device producing the beverage will not operate properly in the intended use, if the used portion capsule is not customized according to the invention. Preferably, a sensor/detection system, attached to the coffee machine or the device producing the beverage, records the identifier and substantially compares it with a stored reference. In particular, it is possible that such an identification process is based on a mechanical fitting, especially a fitting of a gearwheel or of a contour comparable with a gearwheel, which is attached to the device producing the beverage or the coffee machine and interacts with the portion capsule. It is preferred that the device for producing the beverage or the coffee machine only will operate, if the identifier matches to the reference or the mechanical fittings match with each other. In this case the device for producing the beverage particularly starts to operate, especially activates a pressure or water pump. The mean for detection or mechanical fitting is preferably located in the region of the media chute or in the region of the device for producing the beverage. Alternatively, the identifier or the mechanical fitting may avoid that an unsuitable portion capsule is inserted into the device for producing the beverage. A portion capsule, which is designed in accordance with the invention, makes it possible that a portion capsule that is not designed for the device for producing a beverage cannot be inserted into it. Additionally, the identifier allows that the device for producing the beverage, especially the coffee machine, may specify the sort of the portion capsule and thereby control the production process of beverage and food by adapting, for example, the pressure, the temperature and/or the amount of water.

[00026] According to a further preferred embodiment of the present invention, it is provided that at least a part of the grooves and at least in a subarea parallel to the main

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 129 of 598

plane of the membrane is gearwheel shaped.

[00027] According to the present invention, it is an advantage that it is possible to increase the stability of the portion capsule's wall region, to realize improved turbulences of the extraction liquid and thereby to improve the extraction's process under the same conditions, for example, such as material thickness and the like. Another advantage is that it is easy to generate a mechanical identifier or a mechanical fitting that matches with a fitting tool that belongs to the device for producing a beverage. According to the invention it is an further advantage that, for example, a gearwheel, which is attached to the device for producing a beverage and is, for example, located in the region of the media chute or similar, can possibly interacts with the gearwheel's contour of the portion capsule. In this way it is possible to generate a mechanical fitting that allow to individualize the portion capsule as a proper one and/or to specify the sort of portion capsule and/or to rotate the portion capsule about an axis of rotation, that is perpendicular to the membrane's main plane, by using the gearwheel's arrangement. Such an embodiment of the invention makes it possible that the portion capsule is always opened with the device for producing a beverage on the same spot (with respect to its angular position) and therefore the raw material is extracted on the same manner. Moreover, the grooves prevent the portion capsule from being inserted into the coffee machine.

[00028] In a preferred version of the invention, it is provided that there is a flange/edge region being averted from the bottom region, for fixing the membrane to the base element, where in the wall region between flange/edge region and bottom region preferably has a border and the grooves are being preferably extended to this border.

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 130 of 598

[00029] Because of this it is another advantage according to the invention that on the one hand the wall region can be constructed in a stable and reinforced manner and on the other hand the gearwheel shaped contour of the grooves, located at the wall region, is able to absorb a relative high load. With that it is possible that the portion capsule can be rotated easily and without any damaging of the portion capsule within the device for producing a beverage.

[00030] Preferably, the base element's diameter is enlarged in the border's region compared to the wall region, which range from the border to the bottom region.

[00031] This gives rise to the advantageous possibility to stack portion capsule or portion capsules' base elements easily and robustly.

[00032] Moreover, it is preferred that at least a part of the grooves are gearwheel shaped and at least a plane, which is at least partially gearwheel shaped, is parallel to the membrane in such a way that the gearwheel shaped contour expands over the borders or the flange/edge region.

[00033] Further preferred versions of the present invention relate to portion capsules that implement one or more of the following characteristics:

- the base element tapers in the direction of the flange in the border's region,
- the grooves directed toward the bottom region expand over the border's region,

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 131 of 598

- the grooves approximately cover 20% -80%, preferably 40% - 60% of the wall region, which is placed between the border and the bottom region,
- the grooves are constructed in such a way that the wall region is reinforced and/or the grooves causes an extraction liquid's turbulence in the cavity.

[00034] Other preferred versions of the present invention relate to portion capsules that are manufactured in such a way that the ratio of the diameter of that wall region of the base element which adjoins the flange to the diameter of the flange is between 0.85 and 0.89, and in particular substantially 0.87.

[00035] In a preferred version, the wall region's diameter, which is adjacent to the flange, is 39 millimeters ~~millimeter~~ and the flange's diameter is 45 millimeters~~millimeter~~. Another advantageous version of the invention prefers a base element having a thicker wall region in the border's region compared to the wall region between bottom region and flange. Since the portion capsule's design, which contains grooves in the wall region, ~~improve~~ improves its stability, it is possible to save material by manufacturing the portion capsule and therefore to reduce cost and energy required for manufacturing the portion capsules.

[00036] According to the invention it is further provided that a filter element is arranged into the cavity. Such a filter element divides the cavity into a first region for accommodating the beverage raw material and into a second region for accommodating a beverage extract. In particular, it is provided that the filter

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 132 of 598

element is made of a non-woven material.

[00037] According to a further subject matter or a preferred development of the present invention the portion capsule according to the invention is intended for the preparation of a hot beverage. In the following the invention is explained based on the Figures 1 - 22. These explanations do not restrict the general idea of the invention.

~~DETAILED DESCRIPTION~~

Detailed Description

[00058] ~~The view illustrated on the right side of~~ **Figures 1A and 1B** show ~~shows~~ a portion capsule 1 comprising a base element 2 that has a wall region 2.1 and a bottom area 2.2. The wall region 2.1 and the bottom area 2.2 define a cavity 3, which may include the raw material and perhaps a built-in element. After filling, the cavity 3 is sealed by a membrane 4, which is preferably attached to the edge region 2.4 of the base

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 135 of 598

element using seal or glue. This portion capsule can be inserted into a brewing chamber 12~~shown in Figure 12~~, with a liquid, in particular water, flowing through it. During this process, the raw material is extracted or dissolved and therefore the beverage is produced. According to the invention the portion capsule has only one identifier that allows to ~~determinate~~ determine whether the respective portion capsule goes with the coffee machine's brewing chamber 12 and the parameters for processing are chosen properly. If it is not the case, significant security issues arise. Inserting the wrong portion capsule, for example, endangers the brewing chamber's tightness. In this case hot water can be discharged under high pressure and therefore compromise the user's safety. Otherwise, it is also possible that inserting the wrong portion capsule damages the coffee machine. In this example the identifier is represented by several raised areas 8, which differ in reflection properties from the sections between the raised areas. As shown by the arrows the bulges are passed by a mean for detection 13 (here: an optical detector) that is able to differentiate between the unequal sections 5, 6 having different optical properties such as, for example, reflection. Switching between the different sections or the number of bulges represents the identifier. After the identifier has been read out the identifier is compared to a stored reference. If the identifier agrees with the reference, the coffee machine will start operating. Particularly the pump, which is for example responsible for pushing hot water through the brewing chamber, will not start operating, if the identifier does not agree with the reference.

[00059] All the remarks concerning the identifier apply to all the examples.

[00060] **Figures 2A and 2B** show ~~shows~~ another embodiment of the portion

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 136 of 598

capsule 1 according to the invention. The portion capsule 1 comprises a base element 2 that has a wall region 2.1 and a bottom area 2.2. Here the portion capsule 1 has a barcode 50 placed in the area of the membrane's 4 top surface. This ~~bar-code~~barcode may be printed by material removal or may be generated by a medium that is integrated in the foil and can be detected optically such as a fluorescence agent. Alternatively, metal rings may be part of the foil or attached to the foil. The barcode's ~~bar-code's~~ section may be made of a ferromagnetic material. As shown by the arrow 15 the ~~bar-code~~ barcode 50 alternatively can be attached to the base element's edge region being averted from the membrane 4. Such a ~~bar-code~~ barcode is read out by a detector 13 placed, for example, in the media chute. The ~~bar-code~~ barcode represents the identifier according to invention.

[00061] **Figures 3A and 3B** show ~~shows~~ another embodiment of the portion capsule 1 according to the invention. In the present case the identifier comprises recesses and bulges 7, 8, which result from material removal or reshaping the portion capsule as shown here by the example of the portion capsule's wall 2.1. In the present case, recesses and bulges interact with a means for detection 13, which operates like a key, wherein the coffee machine only start operating, when all elements ~~13~~ 14 are placed in the respective recess 7. Therefore, an electric circuit may be changed or especially closed.

[00062] **Figure 4** shows an embodiment of the portion capsule being substantially identical to the embodiment illustrated in Figure 1. As an alternative version of the invention, the figure additionally shows that the unequal sections 5, 6 differing in terms of optical properties can be attached to the cover foil, for example in the form of a ~~bar-code~~barcode.

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 137 of 598

[00063] **Figure 5** shows an embodiment of the portion capsule being substantially identical to the embodiment illustrated in Figures 3A and 3B that includes recesses 7 and bulges 8. Again, the recesses represent the key bit. The coffee machine only will start operating, if the recesses interact with the corresponding bulges and therefore an electric circuit is changed respectively. The placement of such a system is not restricted to the brewing chamber. For instance, the system may be placed in the portion capsule's media chute.

[00064] **Figure 6** shows a version of the invention that includes a base element 2 and an electric material forming a surrounding ring 2.3, which preferably has a raised form. The electrically conductive material is scanned by means for detection 13 having electric sliding contacts, which are placed in the media chute and form electric contacts of an electric circuit, while the portion capsule is inserted.

[00065] **Figure** 7 shows an embodiment of the portion capsule being substantially identical to the embodiment illustrated in Figure 6, in which it is provided that the ring area has reflective 21 or mat 22 sections, for example in form of a covering, and allows a read-out by means for detection 13 for optical detection, which are placed in the media chute and are part of a control current, while the portion capsule is inserted.

[00066] **Figure 8** shows a relative broad and raised ring 2.3 which represents the identifier. The media chute is equipped with a corresponding vacancy that tests whether the portion capsule has the proper identifier. The broad ring is scanned, for example, by

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 138 of 598

means for detection 13 having mechanical sensors, which are placed in the media chute and close the contacts of an electric circuit, while the portions capsule is inserted.

[00067] **Figure 9** shows another embodiment of the portion capsule according to the invention. In the present case an electrically conductive coat 10 is integrated in the edge region's back and is scanned by electric sliding contacts, which are placed in the media chute and form electric contacts of an electric circuit, while the portion capsule is inserted.

[00068] **Figure 10** shows another embodiment of the portion capsule according to the invention. In the present case the portion capsule has an electrically conductive coat 10 at the bottom area 2.2 such as a conductive varnish layer or an aluminum foil. The coat is scanned by means for detection 13 having electric sliding contacts, which form electric contacts of an electric circuit, while the portion capsule is inserted.

[00069] **Figure 11** illustrates a version of the portion capsule having also an electrically conductive coat 10 that is placed on its bottom 2.2 and is identified by a means for detection 13 having a metal sensor, which is placed in the chute and, for example, detects inductively, while the portion capsule is inserted.

[00070] The embodiment of the invention shown in **Figure 12** has a built~~build~~-in element made of metal (here a strainer 19) that is recognized as identifier by a means for detection 13 having a metal detector.

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 139 of 598

[00071] The version of the invention shown in **Figure 13** includes a ferromagnetic material 20 placed at the portion capsule' bottom. The identifier is scanned, by means for detection 13 for example, by a magnet, which is placed in the chute, while the portion capsule is inserted. The ferromagnetic material acts as identifier.

[00072] **Figure ~~10~~ 14** shows another embodiment which includes a ~~bar-code~~barcode placed in the region of the cover foil. The portion capsule includes a flange 17.

[00073] According to the embodiment shown in **Figure 15** a metallic ring 11 is integrated in the wall region 2.1 and closes means for detection 13 having an electric circuit placed in region of the brewing chamber.

[00074] **Figures 16A and 16B** show ~~shows~~ another embodiment of the portion capsule 1 according to the invention. The illustrated portion capsule features a base element 2 that is basically conical- shaped in the present case and has a bottom region 2.2 and a wall region 2.1. It is provided that the base element contains the raw material and, if necessary, build-in elements like a filter as illustrated here. The expert knows that the build-in element may also include other build-in elements. A flange 17 /edge region 2.4, which is preferably circular and, for example, may be used for sealing a cover foil 4 to it, is attached to the end of the base element, which is placed opposite to the bottom. The flange/edge region has means for fit locking, friction locking and/or detection 2.4.2 in the outer area (outer circumference). As especially shown in the Figures 17a - 17c the means for fit locking, friction locking and/or detection ~~mean~~ 2.4.2 is, in the present case, a gearwheel that is formed by several recesses/bulges evenly arranged in the edge region.

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 140 of 598

Preferably, it is provided that the edge region has a sealing surface 2.4.1, which sealingly interacts with the ~~sealing 21~~seal 31 attached to the brewing chamber ~~27~~12, on the interior side of the gearwheel. The sealing ~~21~~ 31 makes sure that the water coming from a water inlet 28 flows ~~rather~~ through the portion capsule by passing an opening, which has been made by a mandrel 29, than around it.

[00075] **Figures 17A, 17B, and 17C~~17a - 17e~~** show different embodiments of the means for fit locking, friction locking and/or detection ~~mean~~ 2.4.2. According to the version shown in Figure ~~17a~~17A, the gearwheel has forty-five teeth. According to the version shown in Figure ~~17b or 17c~~ 17B or 17C, the gearwheel has twenty-two or twenty-nine teeth, respectively. The expert knows that the manufactured teeth can be shaped arbitrarily. All Figures 17A, 17B, and 17C~~17a - 17c~~ demonstrate how the portion capsule 1 can be ~~hold~~ held by a part of the brewing chamber ~~27~~ 12 using two holding arms 30. The holding arms ~~interacts~~ interact with the means for fit locking, friction locking and/or detection ~~mean~~ 2.4.2. If they are not available, the holding arms will not hold the portion capsule and the portion capsule will not be inserted into the brewing chamber and will fall through it into a dropping box instead. The portion capsule has a base element 2, a wall region 2.1, a bottom area 2.2, a sealing surface 2.4.1, and an edge region 2.4.

[00076] **Figure 18** shows the ~~mean 2.4.2.~~ means for fit locking, friction locking and/or detection 2.4.2 along with ~~an~~ mean for fit locking 24, which is attached to the coffee machine and is represented by a pinion here. It is provided that the mean for fit locking 24 is placed in the media chute or insertion shaft 26 of an insertion shaft housing 23 having a port for inserting the portion capsule in the coffee machine. The distance

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 141 of 598

between the inner wall 25 of the portion capsule ~~25—~~1 and the mean for fit locking 24 represented by the pinion ~~27~~ 24 are designed in such a way that the portion capsule only will pass the port, if the means for fit locking, friction locking and/or detection 2.4.2 ~~mean for fit locking~~ is formed complementary to the teeth of the mean for fit locking 24 represented by the pinion ~~27~~. Only in this case the portion capsule rotates the mean for fit locking 24 represented by the pinion 24 while it falls. Both rotating and falling are represented by arrows in the figure. The portion capsule needs the rotation for passing the media chute's port and falling in the intended position afterwards. If the portion capsule has no or wrong mean of fit locking, it will be impossible to place the portion capsule by passing the media chute in the intended position. Additionally, or alternatively, it is provided that the mean for fit locking 24 represented by the pinion ~~24~~ has a pick-up that detects the rotary movement and transmits it to a control unit. If the rotation at least corresponds a defined rotating element, the control unit will activate, for example, the brewing unit. The expert knows that the portion capsule's border may include means for friction locking that interacts with a mean, for example an edge, and shift it in such a way that the shift is detected and therefore the brewing chamber is activated. The portion capsule 1 has a cover foil 4 and a sealing surface 2.4.1.

[00077] The expert moreover knows that a sensor, being for example a camera, which detects the form of the ~~mean~~ means for fit locking, friction locking and/or detection 2.4.2~~.~~, may be installed in the media chute. In the present case the form and/or the distance between the teeth may be detected. If the proper portion capsule was inserted, a resulting signal could be transmitted to a control unit, which activates the brewing chamber.

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 142 of 598

[00078] **Figure 19** schematically shows a view of another portion capsule's version according to an embodiment of the present invention. **Figure 20** illustrates the same portion capsule from a different point of view schematically. Figure 19 shows the front view of the portion capsule. Figure 20 shows the portion capsule viewed from an angle below. In all figures the portion capsule is labeled with the reference sign 1. The portion capsule substantially has a frustoconically shaped base element 2, which is formed similar to a pot and encloses a cavity 3. The cavity 3 is sealed by a membrane 4. Since the viewing direction of ~~Figure 1~~Figure 19 is essentially parallel to the plane, in which the membrane is located, ~~the figure just adumbrate~~ the membrane is at the upper edge of the portion capsule. In particular, the base element 2 comprises a soft, semi-rigid or rigid plastic material which is deep-drown, preferably. The membrane comprises a foil made of plastic material or aluminum. Preferably the base element has a circumferential mounting flange 17 in the region of the membrane, with the membrane and the mounting flange 17 being firmly bonded, in particular by welding or gluing. Preferably a filter element, which is not specifically depicted in the figures, is placed within the base element 2. For instance, the filter element is made of thermoplastic resin such as, for example, polypropylene. The filter element could also be made of a non-woven material such as, for example, thermoplastic resin. Preferably the filter element divides the cavity 3 in two sections. It is provided that the first section can be filled with a raw material and the second section can be filled with and particularly collect a beverage's extract, which is not shown, during the extractions process. Both sections are not illustrated individually.

[00079] The portion capsule is intended for inserting into a brewing chamber or a device for producing a beverage, which is not shown here. In particular such a device for

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 143 of 598

producing a beverage is a coffee machine. The device for producing a beverage could be also a machine that produces a tea drink, a chocolate drink or any other beverage. Preferably an extraction liquid, which is particularly water or hot water, is brought under high pressure into the brewing chamber of the device for producing a beverage. The extraction liquid interacts with the raw material of the beverage in such a way that an extract of a beverage or a beverage is generated. In particular the filter element is utilized as a strainer for the extract of a beverage.

[00080] According to the invention, the base element 2 has a wall region ~~12~~ 2.1 and a bottom area ~~11~~2.2. The wall region ~~12~~ 2.1 basically ranges from the flange 17 to the bottom region ~~11~~2.2. Several grooves ~~15~~ 32 are placed in the wall region. In particular these grooves are keyways that are integrated in the wall region ~~12~~ 2.1 and are facing the cavity 3 and range from the flange 17 to the bottom region ~~11~~ 2.2 (i.e. they run perpendicular according to Figure 19). According to the invention provision is made for the grooves ~~15~~ 32 to be extended vertically across the wall region, i.e. they run straight from the flange 17 to the bottom region ~~11~~2.2, in which it is not necessary that they are extended over the whole length. The grooves are formed according to the invention in such a way that the wall region is reinforced or stiffened due to the grooves ~~15~~32. Moreover, the plurality of the grooves ~~15~~32, which are distributed over the wall region ~~12~~2.1, realize an adhesion between wall region ~~12~~ 2.1 and the brewing chamber's wall of the device for producing a beverage after the extraction process. This makes it easier to eject the portion capsule from the brewing chamber automatically. The portion capsule's version represented in Figure 19 comprises a circumferential border 16 that is placed at the wall region ~~12~~ 2.1 ranging from the flange 17 to the bottom area ~~11~~2.2, namely

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 144 of 598

adjacent to the flange 17 facing towards the bottom area ~~11~~2.2. The border 16 has an enlarged diameter (parallel to the membrane 4) compared to the wall region's ranging from the border 16 to the bottom area ~~11~~2.2. It is provided that the border's contour 16 is designed in such a manner that the border's diameter tapers towards the flange ~~7~~ 17.

[00081] It is provided according to the portion capsule's embodiment, which is represented in Figure 19 and is in accordance with the invention, that the grooves ~~15~~ 32 are placed in the border's region in the first part, partially range from the border 16 to the bottom area ~~11~~ 2.2 across the wall region ~~12~~2.1, in the second part and then finally end. All in all, the grooves cover, for example, around 50 % of the extension of the wall region ~~12~~2.1, which ranges from the flange ~~7~~ 17 to the bottom area ~~11~~2.2, wherein one-third of the grooves' extension is placed in the border's region and two-thirds of the grooves' extension is placed in the remaining wall region ~~12~~ 2.1 that range from the border 16 to the bottom area ~~11~~2.2.

[00082] A portion capsule 1 according to the invention is shown as sectional view along the portion capsule's extension regarding its height in **Figure 21,** i.e. the section's plane is perpendicular to the membrane's main plane. **Figure 22** also shows a portion capsule according to the invention in a sectional view portraying the sectional plane, which is parallel to the membrane's main plane. It is noticeable that the interior of the portion capsule's cavity is shown in Figure 21. The portion capsule's material or the base element's material is so thin that the implementation of grooves 32 at the exterior shown in Figure 19 leads to corresponding convexities 34

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 145 of 598

and impressions at the interior. Figure 22 particularly illustrates the gearwheel shaped contour 36 resulting from insertion of grooves in the portion capsule's 1 wall region.

Filing By Reference:

Only complete this section when filing an application by reference under 35 U.S.C. 111(c) and 37 CFR 1.57(a). Do not complete this section if application papers including a specification and any drawings are being filed. Any domestic benefit or foreign priority information must be provided in the appropriate section(s) below (i.e., "Domestic Benefit/National Stage Information" and "Foreign Priority Information").

For the purposes of a filing date under 37 CFR 1.53(b), the description and any drawings of the present application are replaced by this reference to the previously filed application, subject to conditions and requirements of 37 CFR 1.57(a).

Foreign Priority Information:

This section allows for the applicant to claim priority to a foreign application. Providing this information in the application data sheet constitutes the claim for priority as required by 35 U.S.C. 119(b) and 37 CFR 1.55. When priority is claimed to a foreign application that is eligible for retrieval under the priority document exchange program (PDX)[i] the information will be used by the Office to automatically attempt retrieval pursuant to 37 CFR 1.55(i)(1) and (2). Under the PDX program, applicant bears the ultimate responsibility for ensuring that a copy of the foreign application is received by the Office from the participating foreign intellectual property office, or a certified copy of the foreign priority application is filed, within the time period specified in 37 CFR 1.55(g)(1).

Statement under 37 CFR 1.55 or 1.78 for AIA (First Inventor to File) Transition Applications

☐ This application (1) claims priority to or the benefit of an application filed before March 16, 2013 and (2) also contains, or contained at any time, a claim to a claimed invention that has an effective filing date on or after March 16, 2013.
NOTE: By providing this statement under 37 CFR 1.55 or 1.78, this application, with a filing date on or after March 16, 2013, will be examined under the first inventor to file provisions of the AIA.

Application Data Sheet 37 CFR 1.76	Attorney Docket Number	1859.029USC15
	Application Number	
Title of Invention	PORTION CAPSULE HAVING AN IDENTIFIER	

Authorization or Opt-Out of Authorization to Permit Access:

When this Application Data Sheet is properly signed and filed with the application, applicant has provided written authority to permit a participating foreign intellectual property (IP) office access to the instant application-as-filed (see paragraph A in subsection 1 below) and the European Patent Office (EPO) access to any search results from the instant application (see paragraph B in subsection 1 below).

Should applicant choose not to provide an authorization identified in subsection 1 below, applicant **must opt-out** of the authorization by checking the corresponding box A or B or both in subsection 2 below.

NOTE: This section of the Application Data Sheet is **ONLY** reviewed and processed with the **INITIAL** filing of an application. After the initial filing of an application, an Application Data Sheet cannot be used to provide or rescind authorization for access by a foreign IP office(s). Instead, Form PTO/SB/39 or PTO/SB/69 must be used as appropriate.

1. Authorization to Permit Access by a Foreign Intellectual Property Office(s)

A. Priority Document Exchange (PDX) - Unless box A in subsection 2 (opt-out of authorization) is checked, the undersigned hereby **grants the USPTO authority** to provide the European Patent Office (EPO), the Japan Patent Office (JPO), the Korean Intellectual Property Office (KIPO), the State Intellectual Property Office of the People's Republic of China (SIPO), the World Intellectual Property Organization (WIPO), and any other foreign intellectual property office participating with the USPTO in a bilateral or multilateral priority document exchange agreement in which a foreign application claiming priority to the instant patent application is filed, access to: (1) the instant patent application-as-filed and its related bibliographic data, (2) any foreign or domestic application to which priority or benefit is claimed by the instant application and its related bibliographic data, and (3) the date of filing of this Authorization. See 37 CFR 1.14(h)(1).

B. Search Results from U.S. Application to EPO - Unless box B in subsection 2 (opt-out of authorization) is checked, the undersigned hereby **grants the USPTO authority** to provide the EPO access to the bibliographic data and search results from the instant patent application when a European patent application claiming priority to the instant patent application is filed. See 37 CFR 1.14(h)(2).

The applicant is reminded that the EPO's Rule 141(1) EPC (European Patent Convention) requires applicants to submit a copy of search results from the instant application without delay in a European patent application that claims priority to the instant application.

2. Opt-Out of Authorizations to Permit Access by a Foreign Intellectual Property Office(s)

☐ A. Applicant **DOES NOT** authorize the USPTO to permit a participating foreign IP office access to the instant application-as-filed. If this box is checked, the USPTO will not be providing a participating foreign IP office with any documents and information identified in subsection 1A above.

☐ B. Applicant **DOES NOT** authorize the USPTO to transmit to the EPO any search results from the instant patent application. If this box is checked, the USPTO will not be providing the EPO with search results from the instant application.

NOTE: Once the application has published or is otherwise publicly available, the USPTO may provide access to the application in accordance with 37 CFR 1.14.

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these records.

2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.

3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.

4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).

5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent CooperationTreaty.

6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).

7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.

8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.

9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Receipt is acknowledged of this non-provisional utility patent application. The application will be taken up for examination in due course. Applicant will be notified as to the results of the examination. Any correspondence concerning the application must include the following identification information: the U.S. APPLICATION NUMBER, FILING DATE, NAME OF FIRST INVENTOR, and TITLE OF INVENTION. Fees transmitted by check or draft are subject to collection.

Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please submit a written request for a corrected Filing Receipt, including a properly marked-up ADS showing the changes with strike-through for deletions and underlining for additions. If you received a "Notice to File Missing Parts" or other Notice requiring a response for this application, please submit any request for correction to this Filing Receipt with your reply to the Notice. When the USPTO processes the reply to the Notice, the USPTO will generate another Filing Receipt incorporating the requested corrections provided that the request is grantable.

PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process **simplifies** the filing of patent applications on the same invention in member countries, but **does not result** in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at http://www.uspto.gov/web/offices/pac/doc/general/index.html.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, http://www.stopfakes.gov. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific

countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4258).

LICENSE FOR FOREIGN FILING UNDER

Title 35, United States Code, Section 184

Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign AssetsControl, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

SelectUSA

The United States represents the largest, most dynamic marketplace in the world and is an unparalleled location for business investment, innovation, and commercialization of new technologies. The U.S. offers tremendous resources and advantages for those who invest and manufacture goods here. Through SelectUSA, our nation works to promote and facilitate business investment. SelectUSA provides information assistance to the international investor community; serves as an ombudsman for existing and potential investors; advocates on behalf of U.S. cities, states, and regions competing for global investment; and counsels U.S. economic development organizations on investment attraction best practices. Decision Granting Request for Prioritized Examination (Track I)	**Application No.** 17/844,372	**Applicant(s)** Krüger, Marc	
	Examiner JONYA SMALLS	**Art Unit** OPET	**AIA (FITF) Status** No

1. THE REQUEST FILED 20 June 2022 IS **GRANTED** .

The above-identified application has met the requirements for prioritized examination

A. ☑ for an original nonprovisional application (Track I).
B. ☐ for an application undergoing continued examination (RCE).

2. **The above-identified application will undergo prioritized examination**. The application will be accorded special status throughout its entire course of prosecution until one of the following occurs:

A. filing a **petition for extension of time** to extend the time period for filing a reply;

B. filing an **amendment to amend the application to contain more than four independent claims, more than thirty total claims** , or a multiple dependent claim;

C. filing a **request for continued examination** ;

D. filing a notice of appeal;

E. filing a request for suspension of action;

F. mailing of a notice of allowance;

G. mailing of a final Office action;

H. completion of examination as defined in 37 CFR 41.102; or

I. abandonment of the application.

Telephone inquiries with regard to this decision should be directed to JONYA SMALLS at (571)272-1619. In his/her absence, calls may be directed to Petition Help Desk at (571) 272-3282.

SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT BEFORE THE MAILING OF A FIRST OFFICE ACTION

Applicant submits this statement in accordance with its duty of disclosure under 37 C.F.R. §§ 1.56, 1.97, and 1.98. The submission made herewith is in no way intended as an admission that the cited items constitute material prior art or otherwise would render the claims unpatentable in any way. The submission also is in no way intended to substitute for the Examiner's own independent investigation.

Nothing in this Submission or in any other Submission should be regarded as a disclaimer of claim scope. No statement by Applicant or related companies in any foreign proceeding should be regarded as a disclaimer or other surrender of claim scope in this proceeding.

Because the various foreign proceedings referred to in this and previous Submission involve different claims and context than those pending in this application, nothing cited in this Submission should constitute an acquiescence or adoption of any position advanced in foreign proceedings.

Copies of foreign patent documents and non-patent literature, together with a listing on form PTO/SB/08a are submitted herewith.

No fees are due for the filing of this Submission. But if any fee is due, please charge our deposit account number: 50-1097.

Summary Of Foreign Proceedings

Applicant has been forthcoming in advising the various USPTO Examiners examining the patent applications in this family that Applicant and an Adverse Party[1] are involved in foreign adversarial proceedings in which the Adverse Party is relying on positions that, upon inquiry, are believed to be

[1] As the Office will be able to glean from the submissions, the Adverse Party is one or more companies having Nespresso and/or Nestle in its name.

consistent with those made in previously cited Information Disclosure Statements, including European opposition proceedings and as to which we update the Office to advise that the Adverse Party filed an appeal from the decision of the European Patent Office Opposition Decision that upheld the European patent.

The Undersigned has also been advised that pending in France and Switzerland are nullity proceedings attacking the validity of the opposed patents in those countries. The Adverse Party has also filed an opposition to a Japanese patent. As understood by the Undersigned, the Adverse party has advanced arguments and grounds in the French, Swiss, and Japanese proceedings that are similar to the prior arguments, papers, and oppositions by that Party, which have been cited to the USPTO in the prior filed Information Disclosure Statement (See e.g., Submission dated 06-20-2022). There are also non-infringement proceedings in Europe that are being defended by the Adverse Party based on similar positions taken in the United States that the accused products do not have a barcode as that term was construed.

Accompanying this Submission at Cite No. 14 is a filing by Nestle Nespresso SA dated June 13, 2022 referring to a contingent counterclaim in Switzerland. In that Submission, there is reference to additional potential prior art on pages 16 and 44-47 of the English translation (capsules for the classic Nespresso System Special Edition). As understood, Nestle Nespresso did not allege that the lines on those capsules perform any function in relation to a beverage making machine.

To the extent that the Examiner desires further information on any of the adversarial proceedings, the Examiner is kindly requested to inform the Undersigned.

Foreign Vindication Proceedings

An Adverse Party has filed proceedings in Germany and Switzerland in which, as understood by the undersigned, allege the Asserted Patents were not conceived by the named inventor, Marc Krüger, and instead were derived from others, including without limitation by individuals at Nespresso's affiliates and/or individuals at Eugster/Frismag AG. To the extent that the Examiner desires further information on any of the adversarial proceedings, the Examiner is kindly requested to inform the Undersigned.

Claim Construction Order

It will be observed from the Claim Construction Order cited in a previous Information Disclosure Statement that certain aspects of foreign proceedings are being relied upon by the Adverse Party in the Capsule Litigation. For purposes of the present examination, Applicant desires that prosecution be conducted providing the broadest reasonable meaning of the claim terms without limiting those claim terms to any features allegedly distinguished in foreign proceedings, and Applicant makes no reliance on

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 177 of 598

any arguments made by representatives of Applicant in any such foreign proceedings. To the extent that the Examiner desires further information, the Examiner is kindly requested to inform the Undersigned.

Preliminary Invalidity Contentions

Preliminary Invalidity Contentions have been filed by the Adverse Party against Applicant's commonly-owned US Patent 11,254,491, in Case No. 2:22-cv-00525-GW (AGRx). The Preliminary Invalidity Contentions allege invalidity of US Patent 11,254,491 under 35 U.S.C. § 102, 103, and 112. The Exhibits and Claim Charts referred to in the Preliminary Invalidity Contentions are submitted herewith.

Request For Patent Cancellation of Korean Patent No 10-2318476, mailed June 20, 2022 (hereafter "Request")

A Request has been filed in the Korean Intellectual Property Office by the Adverse party to Cancel Korean Patent No 10-2318476. Upon inquiry, it is understood that the proceeding advances arguments and grounds that are consistent with the prior arguments, papers, and oppositions, which have been cited to the Office in prior Information Disclosure Statements. Request appears to rely on references including: WO 2005/079638 A1, US 2010/0078480 A1, JP 2003-235733, WO 2005/044067 A1, US 2002/0048621 A1, KR 200435370, WO 01/99047 A1, US 6,645,537 B2, EP 1849718 A1, WO 2010/041179 A1, US 2006/0233921 A1. To the extent that the Examiner desires further information on this proceeding, the Examiner is kindly requested to inform the Undersigned.

Notification Of Reasons for Revocation Of Japanese Patent No. 694164, dated June 22, 2022 (hereafter "Notification")

A Notification has been issued by the Japanese Patent Office against Japanese Patent No. 6941640. Upon inquiry, it is understood that the proceeding advances arguments and grounds that are consistent with the prior arguments, papers, and oppositions, which have been cited to the Office in prior Information Disclosure Statements. The JP Notification relies on JP 2013-526316, which is understood to be an equivalent of WO2011141532A and US 2013/0064937 A1; WO 02/28241 A; US 2010/0078480; WO 2010/026053 A1; EP 1722398 A1; EP 0455337 A1; US 5,285,041; WO 01/99047 A; WO 01/60712; and JP 2013-530798. To the extent that the Examiner desires further information on this proceeding, the Examiner is kindly requested to inform the Undersigned.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

NOTIFICATION DATE	DELIVERY MODE
08/11/2022	ELECTRONIC

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

dobrusin_PAIR@firsttofile.com
patmail@patentco.com
rmasquelier@patentco.com

Office Action Summary	Application No. 17/844,372	Applicant(s) Krüger, Marc	
	Examiner JIMMY CHOU	Art Unit 3761	AIA (FITF) Status No

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTHS FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1)☑ Responsive to communication(s) filed on 06/20/2022.

☐ A declaration(s)/affidavit(s) under **37 CFR 1.130(b)** was/were filed on _____.

2a)☐ This action is **FINAL.** 2b) ☑ This action is non-final.

3)☐ An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.

4)☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims*

5) ☑ Claim(s) 10-29 is/are pending in the application.

5a) Of the above claim(s) _____ is/are withdrawn from consideration.

6) ☐ Claim(s) _____ is/are allowed.

7) ☑ Claim(s) 10-29 is/are rejected.

8) ☐ Claim(s) _____ is/are objected to.

9) ☐ Claim(s) _____ are subject to restriction and/or election requirement

* If any claims have been determined allowable, you may be eligible to benefit from the **Patent Prosecution Highway** program at a participating intellectual property office for the corresponding application. For more information, please see http://www.uspto.gov/patents/init_events/pph/index.jsp or send an inquiry to **PPHfeedback@uspto.gov.**

Application Papers

10)☐ The specification is objected to by the Examiner.

11)☑ The drawing(s) filed on 06/20/2022 is/are: a)☑ accepted or b)☐ objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

Priority under 35 U.S.C. § 119

12)☑ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

Certified copies:

a)☑ All b)☐ Some** c)☐ None of the:

1.☑ Certified copies of the priority documents have been received.

2.☐ Certified copies of the priority documents have been received in Application No. _____.

3.☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

** See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) ☑ Notice of References Cited (PTO-892)

2) ☑ Information Disclosure Statement(s) (PTO/SB/08a and/or PTO/SB/08b) Paper No(s)/Mail Date _____.

3) ☐ Interview Summary (PTO-413) Paper No(s)/Mail Date _____.

4) ☑ Other: Search history is attached..

DETAILED ACTION

Notice of Pre-AIA or AIA Status

The present application is being examined under the pre-AIA first to invent provisions.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on nonstatutory double patenting provided the reference application or patent either is shown to be commonly owned with the examined application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement. See

MPEP § 717.02 for applications subject to examination under the first inventor to file provisions of the AIA as explained in MPEP § 2159. See MPEP § 2146 *et seq.* for applications not subject to examination under the first inventor to file provisions of the AIA. A terminal disclaimer must be signed in compliance with 37 CFR 1.321(b).

The USPTO Internet website contains terminal disclaimer forms which may be used. Please visit www.uspto.gov/patent/patents-forms. The filing date of the application in which the form is filed determines what form (e.g., PTO/SB/25, PTO/SB/26, PTO/AIA/25, or PTO/AIA/26) should be used. A web-based eTerminal Disclaimer may be filled out completely online using web-screens. An eTerminal Disclaimer that meets all requirements is auto-processed and approved immediately upon submission. For more information about eTerminal Disclaimers, refer to www.uspto.gov/patents/process/file/efs/guidance/eTD-info-I.jsp.

Claims 10-12 and 15 are provisionally rejected on the ground of nonstatutory double patenting as being unpatentable over claims 10 and 14 of copending Application No. 17547363 in view of Ternite et al. (US 2007/0148290), Ozanne et al. (US 2010/0132564) and Tholstrup (Des. 306,974).

Regarding claim 10, **'363 discloses** "a beverage system" (Claim 10) "for producing a beverage" (intended use), comprising:

"a portion capsule" (Claim 10 at line 2, i.e., a single-serve capsule) comprising:

"a foil lid sealed to a base element having a cavity within which a beverage raw material is provided" (Claim 10, A) i) and iii), i.e., a base element with a cavity in which a beverage material is provided and a cover fastened to the opt side of the flange), "the

base element comprising a circumferential flange having a top side to which the lid is attached" (Claim 10, A) ii) and iii)) and "a bottom side with a printed optically detectable identifier located on the bottom side" (Claim 10, A) v)), and "a beverage machine comprising: a detector to read the identifier" (Claim 10, B), iii)), "a media chute configured to receive and support the portion capsule" (Claim 10, B), i)), and "a pump controlled to push water into the portion capsule only upon a determination that the read identifier agrees with a stored reference" (Claim 10, B), iii)).

'363 is silent regarding a flange comprising a circumferential flange, the optically detectable identifier includes a surface having at least two areas which differ in their reflection properties; wherein the base element has a wall region with an electrically conductive section and radially spaced and vertically oriented drawn grooves, the cavity has radially spaced and vertically oriented drawn ribs.

Ternite et al. teaches "a flange comprising a circumferential flange" (figs.1-3, 5). It would have been obvious to one of ordinary skill in the art at the time the invention was filed to modify '363 with Ternite et al., by modifying '363 flange according to Ternite et al.'s circumferential flange, to provide a conventional circular shape of capsule for adapting in the coffee machine.

Ozanne et al. teaches "the optically detectable identifier includes a surface having at least two areas which differ in their reflection properties, wherein the base element has a wall region with an electrically conductive section" (7 having different shape to create different reflection properties. Examiner noted that the barcode section is the electrically conductive section 7). It would have been obvious to one of ordinary skill in the art at the time the invention was filed to modify '363 with Ozanne et al., by

modifying '363 identifier configuration according to Ozanne et al.'s identifier configuration having different shape or properties, to provide different identification for managing product.

Tholstrup teaches "radially spaced and vertically oriented drawn grooves, the cavity has radially spaced and vertically oriented drawn ribs" (fig.4 shows exterior of capsule having radially spaced and vertically oriented drawn grooves and fig.5 shows interior of capsule having radially spaced and vertically oriented drawn ribs). It would have been obvious to one of ordinary skill in the art at the time the invention was filed to modify '363 with Tholstrup, by modifying '363 capsule side wall according to Tholstrup's capsule side wall, to make the capsule more sturdy.

Regarding claim 11, modified '363 discloses "the beverage machine comprises a pair of holding arms for engaging the portion capsule" ('363, claim 14).

Regarding claim 12, modified '363 discloses "the holding arms engage opposing sides of the portion capsule" ('363, claim 14. It would be obvious that arms can be used to engage the sides of portion capsule).

Regarding claim 15, modified '363 discloses "the beverage machine is operable to pierce the lid in a region that is offset from a central axis of the portion capsule" (Claim 10, B) ii)).

Claims 13-14, 19 and 23 are provisionally rejected on the ground of nonstatutory double patenting as being unpatentable over claims 10, 14 and 19 of

copending Application No. 17547363 in view of Ternite et al. (US 2007/0148290), Ozanne et al. (US 2010/0132564) and Tholstrup (Des. 306,974) as applied in claims 10-12 and 15 above, and further in view of Schifferle (US 20050150391).

Regarding claim 13, '363 discloses all the features of claim limitations as set forth above except for the water is pushed into the portion capsule along a central axis that is perpendicular to the flange of the portion capsule.

Schifferle teaches "the water is pushed into the portion capsule along a central axis that is perpendicular to the flange of the portion capsule" (fig.2 shows the water is pushed in to the capsule along a central axis that is perpendicular to the flange of the portion capsule). It would have been obvious to one of ordinary skill in the art at the time the invention was filed to modify '363 with Schifferle, by modifying '363 water flow direction according to Schifferle's water flow direction, to facilitate water flow via the gravity and pump pressure.

Regarding claim 14, '363 discloses "wherein the beverage machine comprises a mandrel that pierces the lid in a region that is offset from the central axis" ('363, Claim 10, B) ii)).

Regarding claim 19, '363 discloses wherein "the beverage machine comprises a seal that is configured to bear against a top side of the lid in a region between a peripheral edge of the lid and the region of the lid that is pierced by the mandrel" (Claim 10, B) vi). Examiner noted that the lid has a peripheral edge which is well known in the art).

Regarding claim 23, '363 discloses wherein "the optically detectable identifier has a plurality of reflective zones" ('363, Claim 10, A) v), i.e., optically repeat pattern can be

divided into multiple reflective zones), "the portion capsule is free of a filter" ('363, Claim 10, A), i) the case element is free of a filter inside of the cavity), "the portion capsule is made of metal" ('363, Claim 19), and "the optically detectable identifier includes a repeat pattern" ('363, Claim 10, A), v)).

Claims 26-27 are provisionally rejected on the ground of nonstatutory double patenting as being unpatentable over claims 10 and 14 of copending Application No. 17547363 in view of Ternite et al. (US 2007/0148290), Ozanne et al. (US 2010/0132564) and Tholstrup (Des. 306,974) as applied in claims 10-12 and 15 above, and further in view of Lillard, JR. (US 2009/0205747).

Regarding claim 26, modified '363 discloses "the pump is controlled to not push heated water into the portion capsule before a determination that the read identifier" (Claim 10, B, iv), a pump that supplies water is not the single serve capsule only after the individualization identifier is read by the sensor/detector)

Modified '363 is silent regarding the pump is controlled to not push heated water into the portion capsule upon a determination that the read identifier does not agree with the stored reference.

Lillard, JR. teaches "the **dispensing** is controlled to not push heated water into the portion capsule upon a determination that the read identifier does not agree with the stored reference" (para.0040, i.e., In association with the scanner, software, control circuitry, and programmable processor of the present invention, barcode indicia containing information on quantity and type of beverage can prevent a consumer from

using a container that is not intended for a particular type or quantity of beverage by not distributing an incorrect beverage in response to particular indicia. Furthermore, systems and methods of the present invention can prevent customers of a store from attempting to pass off one beverage for another and thereby misinforming store personnel of the type and quantity of beverage dispensed. The method and system can also prevent unauthorized or partial refills of beverages by not dispensing beverages in response to previously used or inappropriate barcode. Barcode indicia containing information on pricing associated with a particular type and quantity of a beverage can eliminate or reduce errors made by store personnel in entering the price for particular a particular beverage). '363 discloses a beverage system. Lillard, JR. teaches a beverage system. It would have been obvious to one of ordinary skill in the art at the time the invention was filed to modify '363 with Lillard, JR., by adding Lillard, JR.'s control mechanism to '363's device, to prevent distributing incorrect beverage (para.0040) as taught by Lillard, JR. The combination of '363 and Lillard, JR. would meet the claim limitation of "the pump is controlled to not push heated water into the portion capsule upon a determination that the read identifier does not agree with the stored reference" because '363 teaches control of dispensing comprising a pump via the reading the identifier. Lillard, JR. teaches "the dispensing is controlled to not push heated water into the portion capsule upon a determination that the read identifier does not agree with the stored reference. It would have been obvious to one of ordinary skill in the art at the time the invention was filed to modify '363 with Lillard, JR., by adding Lillard, JR.'s control mechanism to '363's device, to prevent distributing incorrect beverage (para.0040) as taught by Lillard, JR.

Regarding claim 27, modified '363 discloses "the pump is controlled to not push heated water into the portion capsule upon a determination that the read identifier does not agree with the stored reference" ('363, Claim 10, B), iv) and Lillard, JR., para.0040).

Claims 16-18, 20-22, 24-25 and 28-29 are provisionally rejected on the ground of nonstatutory double patenting as being unpatentable over claims 10 and 14 of copending Application No. 17547363 in view of Ternite et al. (US 2007/0148290), Ozanne et al. (US 2010/0132564) and Tholstrup (US Des. 306,974) as applied in claims 10-12 and 15 above, and further in view of Lillard, JR. (US 2009/0205747).

Regarding claim 16, modified '363 discloses "the portion capsule includes a barrier layer to prevent moisture or aroma from escaping out of the portion capsule" (claim 10, A), iv)).

Modified '363 is silent regarding the electrically conductive section is located all over the base element.

Lillard, JR. teaches "the electrically conductive section is located all over the base element" (para.0031, i.e., FIG. 3C is an elevational view of a container with annular barcode indicia along the entire vertical length of the container in accordance with one embodiment of the present invention). '363 discloses a beverage system. Lillard, JR. teaches a beverage system. It would have been obvious to one of ordinary skill in the art at the time the invention was filed to modify '363 with Lillard, JR., by

adding Lillard, JR.'s control mechanism to '363's device and substitute '363 identifier with Lillard, JR.'s identifier, to prevent distributing incorrect beverage (para.0040) as taught by Lillard, JR.

Regarding claim 17, modified '363 discloses "the portion capsule is assigned to a group of portion capsules that are suitable for the beverage machine" ('363, Claim 10, B), i)), and "if the portion capsule is not appropriate then the beverage machine will not operate" (Lillard, JR, para.0040, i.e., In association with the scanner, software, control circuitry, and programmable processor of the present invention, barcode indicia containing information on quantity and type of beverage can prevent a consumer from using a container that is not intended for a particular type or quantity of beverage by not distributing an incorrect beverage in response to particular indicia. Furthermore, systems and methods of the present invention can prevent customers of a store from attempting to pass off one beverage for another and thereby misinforming store personnel of the type and quantity of beverage dispensed. The method and system can also prevent unauthorized or partial refills of beverages by not dispensing beverages in response to previously used or inappropriate barcode. Barcode indicia containing information on pricing associated with a particular type and quantity of a beverage can eliminate or reduce errors made by store personnel in entering the price for particular a particular beverage).

Regarding claim 18, modified '363 discloses "the optically detectable identifier includes a metallic surface" (Ozanne et al., para.0025, i.e., The identification face of the capsule can be covered by a displaceable, deformable or puncturable membrane such as a plastic layer, an aluminium layer or a laminate of plastic-aluminium).

Regarding claim 20, modified '363 discloses wherein "the beverage machine comprises a seal that is configured to bear against a top side of the lid in a region between a peripheral edge of the lid and the region of the lid that is pierced by the mandrel" ('363, Claim 10, B) vi). Examiner noted that the lid has a peripheral edge which is well known in the art).

Regarding claim 21, modified '363 discloses "the media chute is configured to receive and support the portion capsule" ('363, Claim 10, B), i)) "so that the portion capsule is in opposing contacting relation with the seal" ('363, Claim 10, B), vi)).

Regarding claim 22, modified '363 discloses "the optically detectable identifier is located on a side wall of the base element" (Lillard, JR., 12).

Regarding claim 24, modified '363 discloses "the optically detectable identifier has a plurality of reflective zones" ('363, Claim 10, A) v), i.e., optically repeat pattern can be divided into multiple reflective zones), "the portion capsule is free of a filter" ('363, claim 10, A), i)), "the portion capsule is made of metal" ('363, Claim 19), "the optically detectable identifier includes a repeat pattern" ('363, Claim 10, A) v), i.e., optically repeat pattern can be divided into multiple reflective zones), and "the optically detectable identifier extends around a central axis of the base element" (Lillard, JR., 12).

Regarding claim 25, modified '363 discloses "the optically detectable identifier has a plurality of reflective zones" ('363, Claim 10, A) v), i.e., optically repeat pattern can be divided into multiple reflective zones), "the portion capsule is free of a filter" ('363, claim 10, A), i)), "the portion capsule is made of metal" ('363, Claim 19), "the optically detectable identifier includes a repeat pattern" ('363, Claim 10, A) v), i.e., optically

repeat pattern can be divided into multiple reflective zones), and "the optically detectable identifier extends around a central axis of the base element" (Lillard, JR., 12), and "the base element is deep drawn" ('363, Claim 10, A), i) a base element with a cavity).

Regarding claims 28-29, modified '363 discloses "the pump is controlled to not push heated water into the portion capsule before a determination that the read identifier" (Claim 10, B, iv), a pump that supplies water is not the single serve capsule only after the individualization identifier is read by the sensor/detector)

Modified '363 is silent regarding the pump is controlled to not push heated water into the portion capsule upon a determination that the read identifier does not agree with the stored reference.

Lillard, JR. teaches "the dispensing is controlled to not push heated water into the portion capsule upon a determination that the read identifier does not agree with the stored reference" (para.0040, i.e., In association with the scanner, software, control circuitry, and programmable processor of the present invention, barcode indicia containing information on quantity and type of beverage can prevent a consumer from using a container that is not intended for a particular type or quantity of beverage by not distributing an incorrect beverage in response to particular indicia. Furthermore, systems and methods of the present invention can prevent customers of a store from attempting to pass off one beverage for another and thereby misinforming store personnel of the type and quantity of beverage dispensed. The method and system can also prevent unauthorized or partial refills of beverages by not dispensing beverages in response to previously used or inappropriate barcode. Barcode indicia containing

information on pricing associated with a particular type and quantity of a beverage can eliminate or reduce errors made by store personnel in entering the price for particular a particular beverage). '363 discloses a beverage system. Lillard, JR. teaches a beverage system. It would have been obvious to one of ordinary skill in the art at the time the invention was filed to modify '363 with Lillard, JR., by adding Lillard, JR.'s control mechanism to '363's device, to prevent distributing incorrect beverage (para.0040) as taught by Lillard, JR. The combination of '363 and Lillard, JR. would meet the claim limitation of "the pump is controlled to not push heated water into the portion capsule upon a determination that the read identifier does not agree with the stored reference" because '363 teaches control of dispensing comprising a pump via the reading the identifier. Lillard, JR. teaches "the dispensing is controlled to not push heated water into the portion capsule upon a determination that the read identifier does not agree with the stored reference. It would have been obvious to one of ordinary skill in the art at the time the invention was filed to modify '363 with Lillard, JR., by adding Lillard, JR.'s control mechanism to '363's device, to prevent distributing incorrect beverage (para.0040) as taught by Lillard, JR.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JIMMY CHOU whose telephone number is (571)270-7107. The examiner can normally be reached Mon-Friday.

Examiner interviews are available via telephone, in-person, and video conferencing using a USPTO supplied web-based collaboration tool. To schedule an interview, applicant is encouraged to use the USPTO Automated Interview Request (AIR) at http://www.uspto.gov/interviewpractice.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Helena Kosanovic can be reached on (571) 272-9059. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of published or unpublished applications may be obtained from Patent Center. Unpublished application information in Patent Center is available to registered users. To file and manage patent submissions in Patent Center, visit: https://patentcenter.uspto.gov. Visit https://www.uspto.gov/patents/apply/patent-center for more information about Patent Center and https://www.uspto.gov/patents/docx for information about filing in DOCX format. For additional questions, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

/JIMMY CHOU/ Primary Examiner, Art Unit 3761	

Filed via EFS @ USPTO.gov on July 27, 2022
Practitioner's Docket No. 1859.029USC15 / KRU0022-WO-US-T16

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re application of: Marc Krüger	Art Unit: 3761
Application No.: 17/844,372	Examiner: TBA
Filed: June 20, 2022	Conf. No.: 1796

For: Portion Capsule Having An Identifier

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT BEFORE THE MAILING OF A FIRST OFFICE ACTION

Applicant submits this statement in accordance with its duty of disclosure under 37 C.F.R. §§ 1.56, 1.97, and 1.98. The submission made herewith is in no way intended as an admission that the cited items constitute material prior art or otherwise would render the claims unpatentable in any way. The submission also is in no way intended to substitute for the Examiner's own independent investigation.

Nothing in this Submission or in any other Submission should be regarded as a disclaimer of claim scope. No statement by Applicant or related companies in any foreign proceeding should be regarded as a disclaimer or other surrender of claim scope in this proceeding.

Because the various foreign proceedings referred to in this and previous Submission involve different claims and context than those pending in this application, nothing cited in this Submission should constitute an acquiescence or adoption of any position advanced in foreign proceedings.

Copies of foreign patent documents and non-patent literature, together with a listing on form PTO/SB/08a are submitted herewith.

No fees are due for the filing of this Submission. But if any fee is due, please charge our deposit account number: 50-1097.

Summary Of Foreign Proceedings

Applicant has been forthcoming in advising the various USPTO Examiners examining the patent applications in this family that Applicant and an Adverse Party[1] are involved in foreign adversarial proceedings in which the Adverse Party is relying on positions that, upon inquiry, are believed to be

[1] As the Office will be able to glean from the submissions, the Adverse Party is one or more companies having Nespresso and/or Nestle in its name.

consistent with those made in previously cited Information Disclosure Statements, including European opposition proceedings and as to which we update the Office to advise that the Adverse Party filed an appeal from the decision of the European Patent Office Opposition Decision that upheld the European patent.

The Undersigned has also been advised that pending in France and Switzerland are nullity proceedings attacking the validity of the opposed patents in those countries. The Adverse Party has also filed an opposition to a Japanese patent. As understood by the Undersigned, the Adverse party has advanced arguments and grounds in the French, Swiss, and Japanese proceedings that are similar to the prior arguments, papers, and oppositions by that Party, which have been cited to the USPTO in the prior filed Information Disclosure Statement (See e.g., Submission dated 06-20-2022). There are also non-infringement proceedings in Europe that are being defended by the Adverse Party based on similar positions taken in the United States that the accused products do not have a barcode as that term was construed.

Accompanying this Submission at Cite No. 14 is a filing by Nestle Nespresso SA dated June 13, 2022 referring to a contingent counterclaim in Switzerland. In that Submission, there is reference to additional potential prior art on pages 16 and 44-47 of the English translation (capsules for the classic Nespresso System Special Edition). As understood, Nestle Nespresso did not allege that the lines on those capsules perform any function in relation to a beverage making machine.

To the extent that the Examiner desires further information on any of the adversarial proceedings, the Examiner is kindly requested to inform the Undersigned.

Foreign Vindication Proceedings

An Adverse Party has filed proceedings in Germany and Switzerland in which, as understood by the undersigned, allege the Asserted Patents were not conceived by the named inventor, Marc Krüger, and instead were derived from others, including without limitation by individuals at Nespresso's affiliates and/or individuals at Eugster/Frismag AG. To the extent that the Examiner desires further information on any of the adversarial proceedings, the Examiner is kindly requested to inform the Undersigned.

Claim Construction Order

It will be observed from the Claim Construction Order cited in a previous Information Disclosure Statement that certain aspects of foreign proceedings are being relied upon by the Adverse Party in the Capsule Litigation. For purposes of the present examination, Applicant desires that prosecution be conducted providing the broadest reasonable meaning of the claim terms without limiting those claim terms to any features allegedly distinguished in foreign proceedings, and Applicant makes no reliance on

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
ALL REFERENCES CONSIDERED EXCEPT WHERE LINED THROUGH. /J.C/ Page 250 of 598

any arguments made by representatives of Applicant in any such foreign proceedings. To the extent that the Examiner desires further information, the Examiner is kindly requested to inform the Undersigned.

Preliminary Invalidity Contentions

Preliminary Invalidity Contentions have been filed by the Adverse Party against Applicant's commonly-owned US Patent 11,254,491, in Case No. 2:22-cv-00525-GW (AGRx). The Preliminary Invalidity Contentions allege invalidity of US Patent 11,254,491 under 35 U.S.C. § 102, 103, and 112. The Exhibits and Claim Charts referred to in the Preliminary Invalidity Contentions are submitted herewith.

Request For Patent Cancellation of Korean Patent No 10-2318476, mailed June 20, 2022 (hereafter "Request")

A Request has been filed in the Korean Intellectual Property Office by the Adverse party to Cancel Korean Patent No 10-2318476. Upon inquiry, it is understood that the proceeding advances arguments and grounds that are consistent with the prior arguments, papers, and oppositions, which have been cited to the Office in prior Information Disclosure Statements. Request appears to rely on references including: WO 2005/079638 A1, US 2010/0078480 A1, JP 2003-235733, WO 2005/044067 A1, US 2002/0048621 A1, KR 200435370, WO 01/99047 A1, US 6,645,537 B2, EP 1849718 A1, WO 2010/041179 A1, US 2006/0233921 A1. To the extent that the Examiner desires further information on this proceeding, the Examiner is kindly requested to inform the Undersigned.

Notification Of Reasons for Revocation Of Japanese Patent No. 694164, dated June 22, 2022 (hereafter "Notification")

A Notification has been issued by the Japanese Patent Office against Japanese Patent No. 6941640. Upon inquiry, it is understood that the proceeding advances arguments and grounds that are consistent with the prior arguments, papers, and oppositions, which have been cited to the Office in prior Information Disclosure Statements. The JP Notification relies on JP 2013-526316, which is understood to be an equivalent of WO2011141532A and US 2013/0064937 A1; WO 02/28241 A; US 2010/0078480; WO 2010/026053 A1; EP 1722398 A1; EP 0455337 A1; US 5,285,041; WO 01/99047 A; WO 01/60712; and JP 2013-530798. To the extent that the Examiner desires further information on this proceeding, the Examiner is kindly requested to inform the Undersigned.

Date: July 27, 2022

INFORMATION DISCLOSURE STATEMENT

Applicant submits this statement in accordance with its duty of disclosure under 37 C.F.R. §§ 1.56, 1.97, and 1.98. The submission made herewith is in no way intended as an admission that the cited items constitute material prior art or otherwise would render the claims unpatentable in any way. The submission also is in no way intended to substitute for the Examiner's own independent investigation.

Form PTO/SB/08a is submitted herewith. Copies of foreign patent documents and non-patent literature have not been provided due to their presence in the parent application to this application (see MPEP 609.02(A)(2)), and Applicant notes that this section requires the Examiner to consider all of the references previously submitted to the USPTO even if not listed in any Information Disclosure Statement filed in this application. Applicant is resubmitting these references on the attached form PTO/SB/08a so that all of the references are listed on the face of the patent. However, to the extent that any references have been inadvertently overlooked, or otherwise are not resubmitted on this form, Applicant respectfully requests consideration of the previously submitted references as is set forth in MPEP 609.02(A)(2) and inclusion of such references on the face of the patent. Applicant respectfully solicits the Examiner's consideration of the cited references and entry thereof into the record of this application.

This Information Disclosure Statement is being submitted prior to the mailing of a first Office Action or Notice of Allowance. No fees are believed to be due; however, if any fee is due with the filing of this paper, please charge the amount to Deposit Account 50-1097.

The "Highest Number Previously Paid For" (Total or Independent) is the highest number found in the appropriate box in column 1.	

This collection of information is required by 37 CFR 1.16. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Attorney Docket No.: 1859.029USC15 / KRU0022-WO-US-T16

RESPONSE AND AMENDMENT

In response to the Office Action mailed August 11, 2022, please amend the above-identified application as follows and consider the following remarks.

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 465 of 598

AMENDMENTS TO THE CLAIMS

1) – 9) (Cancelled)

10) (Currently Amended) A beverage system for producing a beverage, comprising:

a portion capsule comprising: a foil lid sealed to a base element having a cavity within which a beverage raw material is provided, the base element comprising a circumferential flange having a top side to which the lid is attached and a bottom side with a printed optically detectable identifier located on the bottom side, the optically detectable identifier includes a surface having at least two areas which differ in their reflection properties, and

a beverage machine comprising: a detector to read the optically detectable identifier, a media chute configured to receive and support the portion capsule, and a pump controlled to push water into the portion capsule only upon a determination that the read optically detectable identifier agrees with a stored reference,

wherein the base element has a wall region with an electrically conductive section and radially spaced and vertically oriented drawn grooves, the cavity has radially spaced and vertically oriented drawn ribs.

11) (Previously Presented) The beverage system according to claim 10, wherein the beverage machine comprises a pair of holding arms for engaging the portion capsule.

12) (Previously Presented) The beverage system according to claim 11, wherein the holding arms engage opposing sides of the portion capsule.

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 466 of 598

13) (Previously Presented) The beverage system according to claim 10, wherein the water is pushed into the portion capsule along a central axis that is perpendicular to the flange of the portion capsule.

14) (Previously Presented) The beverage system according to claim 13, wherein the beverage machine comprises a mandrel that pierces the lid in a region that is offset from the central axis.

15) (Previously Presented) The beverage system according to claim 10, wherein the beverage machine is operable to pierce the lid in a region that is offset from a central axis of the portion capsule.

16) (Previously Presented) The beverage system according to claim 10, wherein the electrically conductive section is located all over the base element and the portion capsule includes a barrier layer to prevent moisture or aroma from escaping out of the portion capsule.

17) (Previously Presented) The beverage system according to claim 16, wherein the portion capsule is assigned to a group of portion capsules that are suitable for the beverage machine, and if the portion capsule is not appropriate then the beverage machine will not operate.

18) (Previously Presented) The beverage system according to claim 17, wherein the optically detectable identifier includes a metallic surface.

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 467 of 598

19) (Previously Presented) The beverage system according to claim 14, wherein the beverage machine comprises a seal that is configured to bear against a top side of the lid in a region between a peripheral edge of the lid and the region of the lid that is pierced by the mandrel.

20) (Currently Amended) The beverage system according to claim 18, wherein the beverage machine comprises a groove, and a seal at least partially located in the groove that is configured to bear against a top side of the lid in a region between a peripheral edge of the lid and the region of the lid that is pierced by the mandrel.

21) (Currently Amended) The beverage system according to claim 20, wherein the media chute is configured to receive and support the portion capsule so that the portion capsule is in an opposing contacting ~~relation~~ relationship with the seal.

22) (Previously Presented) The beverage system according to claim 16, wherein the optically detectable identifier is located on a side wall of the base element.

23) (Previously Presented) The beverage system according to claim 14, wherein the optically detectable identifier has a plurality of reflective zones, the portion capsule is free of a filter, the portion capsule is made of metal, and the optically detectable identifier includes a repeat pattern.

24) (Previously Presented) The beverage system according to claim 21, wherein the optically detectable identifier has a plurality of reflective zones, the portion capsule is free of a filter, the portion capsule is made of metal, the optically detectable identifier includes a repeat pattern, and the optically detectable identifier extends around a central axis of the base element.

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 468 of 598

25) (Previously Presented) The beverage system according to claim 22, wherein the optically detectable identifier has a plurality of reflective zones, the portion capsule is free of a filter, the portion capsule is made of metal, the optically detectable identifier includes a repeat pattern, the optically detectable identifier extends around a central axis of the base element, and the base element is deep drawn.

26) (Currently Amended) The beverage system according to claim 10, wherein the pump is controlled to not push heated water into the portion capsule upon a determination that the read optically detectable identifier does not agree with the stored reference.

27) (Currently Amended) The beverage system according to claim 14, wherein the pump is controlled to not push heated water into the portion capsule upon a determination that the read optically detectable identifier does not agree with the stored reference.

28) (Currently Amended) The beverage system according to claim 21, wherein the pump is controlled to not push heated water into the portion capsule upon a determination that the read optically detectable identifier does not agree with the stored reference.

29) (Currently Amended) The beverage system according to claim 24, wherein the pump is controlled to not push heated water into the portion capsule upon a determination that the read optically detectable identifier does not agree with the stored reference.

Nespresso USA, Inc. Ex. 1002
Page 469 of 598

30) (New) The beverage system according to claim 10, wherein the portion capsule includes a barrier layer.

31) (New) The beverage system according to claim 30, wherein the beverage machine comprises a groove and a seal that is at least partially seated in the groove, the seal is configured to bear against a top side of the lid.

32) (New) The beverage system according to claim 30, wherein the grooves reinforce the wall region of the base element.

33) (New) The beverage system according to claim 31, wherein the grooves reinforce the wall region of the base element.

REMARKS

In the Office Action mailed August 11, 2022, the Examiner rejected claims 10-29.

Claim Amendments

By way of the foregoing amendments and the markings to show changes Applicant has amended the claims and added new claims. No new matter has been added.

The foregoing amendments are taken in the interest of expediting prosecution and there is no intention of surrendering any range of equivalents to which Applicant would otherwise be entitled in view of the prior art.

Further, by the present amendment, it does not follow that the amended claims have become so perfect in their description that no one could devise an equivalent. After amendment, as before, limitations in the ability to describe the present invention in language in the patent claims naturally prevent the Applicant from capturing every nuance of the invention or describing with complete precision the range of its novelty or every possible equivalent. Accordingly, the foregoing amendments are made specifically in the interest of expediting prosecution and there is no intention of surrendering any range of equivalents to which Applicant would otherwise be entitled.

Double Patenting

Claims 10-12 and 15 are provisionally rejected on the ground of nonstatutory double patenting as allegedly being unpatentable over claims 10 and 14 of copending Application No. 17547363 in view of Ternite et al. (US 2007/0148290), Ozanne et al. (US 2010/0132564) and Tholstrup (Des. 306,974). This rejection is respectfully traversed for at least the reasons mentioned below. Claims 13-14, 19 and 23 are provisionally rejected on the ground of nonstatutory double patenting as allegedly being unpatentable over claims 10, 14 and 19 of copending Application No. 17547363 in view of Ternite et al. (US 2007/0148290), Ozanne et al. (US 2010/0132564) and Tholstrup (Des. 306,974) as applied in claims 10-12 and 15 above, and further in view of Schifferle (US 20050150391). This rejection is respectfully traversed for at least the reasons mentioned below. Claims 26-27 are provisionally rejected on the ground of nonstatutory double patenting as allegedly being unpatentable over claims 10 and 14 of copending Application No. 17547363 in view of Ternite et al. (US 2007/0148290), Ozanne et al. (US 2010/0132564) and Tholstrup (Des. 306,974) as applied in claims 10-12 and 15 above, and further in view of Lillard, JR. (US

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
Page 471 of 598

2009/0205747). This rejection is respectfully traversed for at least the reasons mentioned below. Claims 16-18, 20-22, 24-25 and 28-29 are provisionally rejected on the ground of nonstatutory double patenting as allegedly being unpatentable over claims 10 and 14 of copending Application No. 17547363 in view of Ternite et al. (US 2007/0148290), Ozanne et al. (US 2010/0132564) and Tholstrup (US Des. 306,974) as applied in claims 10-12 and 15 above, and further in view of Lillard, JR. (US 2009/0205747). These double patenting rejections are respectfully traversed for at least the reasons mentioned below.

Applicant believes that the currently pending claims include distinguishing features that, as a whole, patentably distinguish and obviate the provisional rejections alleged in the Office Action and noted above. Moreover, given the provisional nature of this rejection, Applicant believes the filing of a Terminal Disclaimer is premature. However, in the interest of streamlining prosecution, narrowing the open issues, and avoiding protracted prosecution, Applicant nevertheless submits the present Terminal Disclaimer. The submission of this Terminal Disclaimer under no circumstances should be interpreted or otherwise regarded as an admission that the present claims cover subject matter that is obvious in view of the provisional rejections noted above and in the office action. Nothing in this submission should be considered a disclaimer of any type. Nothing in this submission should be considered a disclaimer of any claim scope. Applicant expressly reserves the right to argue the differences between the present claims and the provisional rejections in the future, in any context in which it may arise. Moreover, by submitting the present Terminal Disclaimer, Applicant disagrees that an Obviousness Type Double Patenting rejection is proper, and that this Terminal Disclaimer is even necessary.

Invitation For Telephonic Interview

If the Examiner has any questions or comments that may help streamline and expedite prosecution of this application, the Examiner is kindly encouraged to contact Applicant's representative Paul Palinski via direct dial telephone at 248-309-3045.

Page 472 of 598

CONCLUSIONS

In view of Applicant's amendments and remarks, the Examiner's rejections are believed to be rendered moot. Accordingly, Applicant submits that the present application is in condition for allowance and requests that the Examiner pass the case to issue at the earliest convenience. Should the Examiner have any questions or wish to further discuss this application, Applicant requests that the Examiner contact the undersigned at (248) 292-2920.

If for some reason Applicant has not requested a sufficient extension and/or has not paid a sufficient fee for this response and/or for the extension necessary to prevent the abandonment of this application, please consider this as a request for an extension for the required time period and/or authorization to charge our Deposit Account No. 50-1097 for any fee which may be due.

Respectfully submitted,

Date: August 30, 2022

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Doc Code: DIST.E.FILE Document Description: Electronic Terminal Disclaimer - Filed	PTO/SB/25 U.S. Patent and Trademark Office Department of Commerce

Electronic Petition Request	**TERMINAL DISCLAIMER TO OBVIATE A PROVISIONAL DOUBLE PATENTING REJECTION OVER A PENDING "REFERENCE" APPLICATION**
Application Number	17844372
Filing Date	20-Jun-2022
First Named Inventor	Marc Krüger
Attorney Docket Number	1859.029USC15
Title of Invention	PORTION CAPSULE HAVING AN IDENTIFIER

☒ Filing of terminal disclaimer does not obviate requirement for response under 37 CFR 1.111 to outstanding Office Action

☒ This electronic Terminal Disclaimer is not being used for a Joint Research Agreement.

Owner	Percent Interest
K-FEE SYSTEM GMBH	100%

The owner(s) of percent interest listed above in the instant application hereby disclaims, except as provided below, the terminal part of the statutory term of any patent granted on the instant application which would extend beyond the expiration date of the full statutory term of any patent granted on pending reference Application Number(s)

17547363 filed on 12/10/2021

as the term of any patent granted on said reference application may be shortened by any terminal disclaimer filed prior to the grant of any patent on the pending reference application. The owner hereby agrees that any patent so granted on the instant application shall be enforceable only for and during such period that it and any patent granted on the reference application are commonly owned. This agreement runs with any patent granted on the instant application and is binding upon the grantee, its successors or assigns.

In making the above disclaimer, the owner does not disclaim the terminal part of any patent granted on the instant application that would extend to the expiration date of the full statutory term of any patent granted on said reference application, "as the term of any patent granted on said reference application may be shortened by any terminal disclaimer filed prior to the grant of any patent on the pending reference application," in the event that any such patent granted on the pending reference application: expires for failure to pay a maintenance fee, is held unenforceable, is found invalid by a court of competent jurisdiction, is statutorily disclaimed in whole or terminally disclaimed under 37 CFR 1.321, has all claims canceled by a reexamination certificate, is reissued, or is in any manner terminated prior to the expiration of its full statutory term as shortened by any terminal disclaimer filed prior to its grant.

◉ Terminal disclaimer fee under 37 CFR 1.20(d) is included with Electronic Terminal Disclaimer request.

○	I certify, in accordance with 37 CFR 1.4(d)(4), that the terminal disclaimer fee under 37 CFR 1.20(d) required for this terminal disclaimer has already been paid in the above-identified application.

Applicant claims the following fee status:

○ Small Entity

○ Micro Entity

◉ Regular Undiscounted

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

THIS PORTION MUST BE COMPLETED BY THE SIGNATORY OR SIGNATORIES

I certify, in accordance with 37 CFR 1.4(d)(4) that I am:

◉ An attorney or agent registered to practice before the Patent and Trademark Office who is of record in this application

Registration Number 71080

○ A sole inventor

○ A joint inventor; I certify that I am authorized to sign this submission on behalf of all of the inventors as evidenced by the power of attorney in the application

○ A joint inventor; all of whom are signing this request

Signature	/Paul J. Palinski/
Name	Paul J. Palinski

*Statement under 37 CFR 3.73(b) is required if terminal disclaimer is signed by the assignee (owner).
Form PTO/SB/96 may be used for making this certification. See MPEP § 324.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

NOTICE OF ALLOWANCE AND FEE(S) DUE

25215 7590 09/12/2022

The Dobrusin Law Firm P.C.
29 W. Lawrence Street
Suite 210
Pontiac, MI 48342

EXAMINER
CHOU, JIMMY

ART UNIT	PAPER NUMBER
3761	

DATE MAILED: 09/12/2022

APPLICATION NO.	FILING DATE	FIRST NAMED INVENTOR	ATTORNEY DOCKET NO.	CONFIRMATION NO.
17/844,372	06/20/2022	Marc Krüger	1859.029USC15	1796

TITLE OF INVENTION: PORTION CAPSULE HAVING AN IDENTIFIER

APPLN. TYPE	ENTITY STATUS	ISSUE FEE DUE	PUBLICATION FEE DUE	PREV. PAID ISSUE FEE	TOTAL FEE(S) DUE	DATE DUE
nonprovisional	UNDISCOUNTED	$1200	$0.00	$0.00	$1200	12/12/2022

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the ENTITY STATUS shown above. If the ENTITY STATUS is shown as SMALL or MICRO, verify whether entitlement to that entity status still applies.

If the ENTITY STATUS is the same as shown above, pay the TOTAL FEE(S) DUE shown above.

If the ENTITY STATUS is changed from that shown above, on PART B - FEE(S) TRANSMITTAL, complete section number 5 titled "Change in Entity Status (from status indicated above)".

For purposes of this notice, small entity fees are 1/2 the amount of undiscounted fees, and micro entity fees are 1/2 the amount of small entity fees.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Maintenance fees are due in utility patents issuing on applications filed on or after Dec. 12, 1980. It is patentee's responsibility to ensure timely payment of maintenance fees when due. More information is available at www.uspto.gov/PatentMaintenanceFees.

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), by mail or fax, or via EFS-Web.

By mail, send to: Mail Stop ISSUE FEE
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450

By fax, send to: (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

25215 7590 09/12/2022

The Dobrusin Law Firm P.C.
29 W. Lawrence Street
Suite 210
Pontiac, MI 48342

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission

I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being transmitted to the USPTO via EFS-Web or by facsimile to (571) 273-2885, on the date below.

1. Change of correspondence address or indication of "Fee Address" (37 CFR 1.363).

❑ Change of correspondence address (or Change of Correspondence Address form PTO/AIA/122 or PTO/SB/122) attached.

❑ "Fee Address" indication (or "Fee Address" Indication form PTO/AIA/47 or PTO/SB/47; Rev 03-02 or more recent) attached. **Use of a Customer Number is required.**

2. For printing on the patent front page, list
(1) The names of up to 3 registered patent attorneys or agents OR, alternatively,
(2) The name of a single firm (having as a member a registered attorney or agent) and the names of up to 2 registered patent attorneys or agents. If no name is listed, no name will be printed.

1 _____
2 _____
3 _____

3. ASSIGNEE NAME AND RESIDENCE DATA TO BE PRINTED ON THE PATENT (print or type)

PLEASE NOTE: Unless an assignee is identified below, no assignee data will appear on the patent. If an assignee is identified below, the document must have been previously recorded, or filed for recordation, as set forth in 37 CFR 3.11 and 37 CFR 3.81(a). Completion of this form is NOT a substitute for filing an assignment.

(A) NAME OF ASSIGNEE (B) RESIDENCE: (CITY and STATE OR COUNTRY)

Please check the appropriate assignee category or categories (will not be printed on the patent) : ❑ Individual ❑ Corporation or other private group entity ❑ Government

4a. Fees submitted: ❑ Issue Fee ❑ Publication Fee (if required) ❑ Advance Order - # of Copies _____

4b. Method of Payment: *(Please first reapply any previously paid fee shown above)*

❑ Electronic Payment via EFS-Web ❑ Enclosed check ❑ Non-electronic payment by credit card (Attach form PTO-2038)

❑ The Director is hereby authorized to charge the required fee(s), any deficiency, or credit any overpayment to Deposit Account No. _____

5. **Change in Entity Status** (from status indicated above)

❑ Applicant certifying micro entity status. See 37 CFR 1.29

❑ Applicant asserting small entity status. See 37 CFR 1.27

❑ Applicant changing to regular undiscounted fee status.

NOTE: Absent a valid certification of Micro Entity Status (see forms PTO/SB/15A and 15B), issue fee payment in the micro entity amount will not be accepted at the risk of application abandonment.
NOTE: If the application was previously under micro entity status, checking this box will be taken to be a notification of loss of entitlement to micro entity status.
NOTE: Checking this box will be taken to be a notification of loss of entitlement to small or micro entity status, as applicable.

NOTE: This form must be signed in accordance with 37 CFR 1.31 and 1.33. See 37 CFR 1.4 for signature requirements and certifications.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(Applications filed on or after May 29, 2000)

The Office has discontinued providing a Patent Term Adjustment (PTA) calculation with the Notice of Allowance.

Section 1(h)(2) of the AIA Technical Corrections Act amended 35 U.S.C. 154(b)(3)(B)(i) to eliminate the requirement that the Office provide a patent term adjustment determination with the notice of allowance. See Revisions to Patent Term Adjustment, 78 Fed. Reg. 19416, 19417 (Apr. 1, 2013). Therefore, the Office is no longer providing an initial patent term adjustment determination with the notice of allowance. The Office will continue to provide a patent term adjustment determination with the Issue Notification Letter that is mailed to applicant approximately three weeks prior to the issue date of the patent, and will include the patent term adjustment on the patent. Any request for reconsideration of the patent term adjustment determination (or reinstatement of patent term adjustment) should follow the process outlined in 37 CFR 1.705.

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

OMB Clearance and PRA Burden Statement for PTOL-85 Part B

The Paperwork Reduction Act (PRA) of 1995 requires Federal agencies to obtain Office of Management and Budget approval before requesting most types of information from the public. When OMB approves an agency request to collect information from the public, OMB (i) provides a valid OMB Control Number and expiration date for the agency to display on the instrument that will be used to collect the information and (ii) requires the agency to inform the public about the OMB Control Number's legal significance in accordance with 5 CFR 1320.5(b).

The information collected by PTOL-85 Part B is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 30 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450. Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Notice of Allowability	Application No. 17/844,372	Applicant(s) Krüger, Marc	
	Examiner JIMMY CHOU	Art Unit 3761	AIA (FITF) Status No

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. ☑ This communication is responsive to 08/30/2022.
   ☐ A declaration(s)/affidavit(s) under **37 CFR 1.130(b)** was/were filed on _____.

2. ☐ An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.

3. ☑ The allowed claim(s) is/are 10-33 . As a result of the allowed claim(s), you may be eligible to benefit from the **Patent Prosecution Highway** program at a participating intellectual property office for the corresponding application. For more information, please see **http://www.uspto.gov/patents/init_events/pph/index.jsp** or send an inquiry to **PPHfeedback@uspto.gov.**

4. ☑ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

   Certified copies:

   a) ☑ All b) ☐ Some* c) ☐ None of the:

   1. ☑ Certified copies of the priority documents have been received.
   2. ☐ Certified copies of the priority documents have been received in Application No. _____ .
   3. ☐ Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

   * Certified copies not received: _____ .

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.
THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.

5. ☐ CORRECTED DRAWINGS (as "replacement sheets") must be submitted.
   ☐ including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date _____ .

   Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).

6. ☐ DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

Attachment(s)

1. ☑ Notice of References Cited (PTO-892)
2. ☐ Information Disclosure Statements (PTO/SB/08), Paper No./Mail Date _____.
3. ☐ Examiner's Comment Regarding Requirement for Deposit of Biological Material _____.
4. ☐ Interview Summary (PTO-413), Paper No./Mail Date. _____.
5. ☑ Examiner's Amendment/Comment
6. ☑ Examiner's Statement of Reasons for Allowance
7. ☑ Other See Continuation Sheet.

/JIMMY CHOU/
Primary Examiner, Art Unit 3761

Continuation of Attachment(s) 7. Other: 1. bib-data sheet is attached. 2. amendment to claims filed on 08/30/2022 is attached. 3. Search history is attached.

Notice of Pre-AIA or AIA Status

The present application is being examined under the pre-AIA first to invent provisions.

Reason for Allowance

The following is a statement of reasons for the indication of allowable subject matter: The closest prior art of record are **Jarisch et al.** (US 2013/0064937), **Schmed et al.** (US 7,856,920), **Ternite et al.** (US 2007/0148290), **Ozanne et al.** (US 2010/0132564), **Tholstrup** (Des. 306974) and **Schifferle** (US 2005/0150391). The prior art of record references neither discloses, or suggests, in combination with the other limitations of independent claim 10, a beverage machine comprising: a detector to read the optically detectable identifier, a media chute configured to receive and support the portion capsule, and a pump controlled to push water into the portion capsule only upon a determination that the read optically detectable identifier agrees with a stored reference, wherein the base element has a wall region with an electrically conductive section and radially spaced and vertically oriented drawn grooves, the cavity has radially spaced and vertically oriented drawn ribs.

Examiner's Comment

(1) The terminal disclaimer filed on 08/30/2022 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of

app. 17547363 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JIMMY CHOU whose telephone number is (571)270-7107. The examiner can normally be reached Mon-Friday.

Examiner interviews are available via telephone, in-person, and video conferencing using a USPTO supplied web-based collaboration tool. To schedule an interview, applicant is encouraged to use the USPTO Automated Interview Request (AIR) at http://www.uspto.gov/interviewpractice.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Helena Kosanovic can be reached on (571) 272-9059. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of published or unpublished applications may be obtained from Patent Center. Unpublished application information in Patent Center is available to registered users. Title:PORTION CAPSULE HAVING AN IDENTIFIER

Publication No.US-2022-0324638-A1
Publication Date:10/13/2022

NOTICE OF PUBLICATION OF APPLICATION

The above-identified application will be electronically published as a patent application publication pursuant to 37 CFR 1.211, et seq. The patent application publication number and publication date are set forth above.

The publication may be accessed through the USPTO's publically available Searchable Databases via the Internet at www.uspto.gov. The direct link to access the publication is currently http://www.uspto.gov/patft/.

The publication process established by the Office does not provide for mailing a copy of the publication to applicant. A copy of the publication may be obtained from the Office upon payment of the appropriate fee set forth in 37 CFR 1.19(a)(1). Orders for copies of patent application publications are handled by the USPTO's Public Records Division. The Public Records Division can be reached by telephone at (571) 272-3150 or (800) 972-6382, by facsimile at (571) 273-3250, by mail addressed to the United States Patent and Trademark Office, Public Records Division, Alexandria, VA 22313-1450 or via the Internet.

In addition, information on the status of the application, including the mailing date of Office actions and the dates of receipt of correspondence filed in the Office, may also be accessed via the Internet through the Patent Electronic Business Center at www.uspto.gov using the public side of the Patent Application Information and Retrieval (PAIR) system. The direct link to access this status information is currently https://portal.uspto.gov/pair/PublicPair. Prior to publication, such status information is confidential and may only be obtained by applicant using the private side of PAIR.

Further assistance in electronically accessing the publication, or about PAIR, is available by calling the Patent Electronic Business Center at 1-866-217-9197.

SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT

UNDER 37 C.F.R. §1.97(E)(2)

Applicant submits this statement in accordance with its duty of disclosure under 37 C.F.R. §§ 1.56, 1.97, and 1.98. The submission made herewith is in no way intended as an admission that the cited items constitute material prior art or otherwise would render the claims unpatentable in any way.

The submission and remarks/statements contained herein also is in no way intended to substitute for the Examiner's own independent investigation. Nothing in this Submission or in any other Submission should be regarded as a disclaimer of claim scope. No remark/statement by Applicant or Applicant's related companies in this or any foreign proceeding should be regarded as a disclaimer or other surrender of claim scope in this proceeding.

E(2) Certification: No item of information contained in this information disclosure statement was cited in a communication from a foreign patent office in a counterpart foreign application, and, to the knowledge of the undersigned after making reasonable inquiry, no item of information contained in the information disclosure statement was known to any individual designated in § 1.56(c) more than three months prior to the filing of the information disclosure statement.

Applicant Statement on the Petition For Inter Partes Review of US 11,254,491

A Petition For Inter Partes Review ("IPR Petition") was filed by Petitioner Nespresso USA, Inc. against Applicant's commonly owned US Patent No. 11,254,491. A copy of the IPR Petition is submitted herewith as NPL Cite No. 1. As noted on page 82 of the IPR Petition, "Nestlé USA,

Inc., Nestlé Nespresso SA, and Société Des Produits Nestlé SA are real parties-in-interest with Petitioner" Nespresso USA, Inc.

I. Alleged Lack of Entitlement to the Priority Date

In the IPR Petition, Petitioner again raises a lack of entitlement to the priority date, a topic that Petitioner has previously raised in three (3) prior IPR Petition filings against Applicant's other patents in this patent family, which the USPTO PTAB declined to institute and also denied Petitioner's rehearing requests. The Examiner is kindly encouraged to review the 3 previous IPR Petition filings, which Applicant has made available in previous IDS submissions, the PTAB decisions denying institution of Petitioner's 3 previous IPR filings, and the PTAB subsequent rehearing denials, all of which can be easily accessed from the USPTO PTAB website under the following AIA Review Numbers:

- IPR2021-01221
- IPR2021-01222
- IPR2021-01223

The topic of priority entitlement has also been discussed and addressed numerous times by Applicant in detail and on the record in multiple communications with the USPTO in multiple patent applications in this patent family. For example, Applicant's discussions with the USPTO regarding priority can be found in at least the following applications in this patent family:

- US 16/538,752 (now US Patent No. 10,858,176): See Applicant remarks filed on July 27, 2020.
- US 16/860,441 (now US Patent No. 10,870,531): See Applicant remarks filed on October 13, 2020.
- US 17/670,629 (now US Patent No. 11,465,829): See Interview Summary Dated July 05, 2022; Applicant remarks filed on July 15, 2022; and the Examiner's comment included in the Notice of Allowance dated August 12, 2022.
- US 17/670,765 (now US Patent No. 11,465,830): See Interview Summary Dated July 05, 2022; Applicant remarks filed on July 15, 2022; and the Examiner's comment included in the Notice of Allowance dated August 11, 2022.

- US 17/547,363: See Interview Summary Dated June 17, 2022; Applicant remarks filed on July 01, 2022; and the Examiner's comment included in the Notice of Allowance dated July 19, 2022.

II. Petition Grounds

The newly filed IPR Petition relies on two (2) grounds, which are summarized on page 30 of the IPR Petition. The grounds rely on a combination of references including: Yoakim (US2010/0239734A1), Jarisch (US2013/0064929A1), Rossi (WO2010/099806A1), and Castellani (US2008/0105131). Petitioner acknowledges on Page 19 of the IPR Petition that these references "were all cited, directly or indirectly, in a series of IDSs" by Applicant.

Petitioner also cites more than 3 pages of references and documents in Petitioner's Exhibit List on pages x-xiii of the IPR Petition, many of which have also already been before the Office in various IDS submission and previous IPR filings. Nonetheless, Applicant respectfully requests the Examiner review the references and documents in Petitioner's Exhibit List.

A. The Jarisch Reference (US2013/0064929A1)

The IPR Petition relies on the Jarisch Reference (US2013/0064929A1) in both grounds. Because Applicant believes it is entitled to at least the September 2010 priority date, the Jarisch reference is not prior art. However, Applicant notes that the Jarisch reference was considered by several different USPTO Examiners in various art units examining Applicant's other co-pending Applications, which ultimately issued as numerous US Patents (See References Cited in US Patent Nos. US10,858,176; US10,858,177; US10,870,531; US10,994,923; US11,465,829; US11,465,830; 11,230,430). The Jarisch reference has also been presented to the Office in Applicant's other pending US Applications currently undergoing examination (See US 15646980 and US 17844372). The Jarisch reference was also presented in Petitioner's 3 prior IPR Filings.

B. The Rossi Reference (WO 2010/099806)

Petitioner alleges in the IPR Petition that the Rossi reference WO 2010/099806 contains disclosure of the patentable subject matter that was identified by the US Examiner in 17/383,951 (See non-final office action dated 11-29-2021; i.e., a pump controlled to supply water into the single-serve capsule only upon detection of the identifier by the sensor/detector and a

determination by the beverage machine that the single-serve capsule is suitable for use with the beverage machine.). Applicant notes that the Rossi reference was relied upon by a USPTO Examiner in an office action in another application in this patent family - US 16/538,752, now US Patent No. 10,858,176 (See Non-Final Office Action dated November 08, 2019). Applicant respectfully requests the Examiner undertake an independent review of the Rossi reference and consider the Rossi teachings, as interpreted in the IPR Petition. Applicant makes no statement or disclaimer on the Rossi teachings or how it is interpreted by Petition in the IPR Petition. Lastly, Applicant requests the Examiner monitor the status of IPR2022-01574.

To the extent that the Examiner desires any further information on any of the documents or remarks included in this IDS, the Examiner is kindly requested to inform the Undersigned, who can be reached via direct dial telephone at 248-309-3045.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT UNDER 37 C.F.R. §1.97(E)(2)

Applicant submits this statement in accordance with its duty of disclosure under 37 C.F.R. §§ 1.56, 1.97, and 1.98. The submission made herewith is in no way intended as an admission that the cited items constitute material prior art or otherwise would render the claims unpatentable in any way.

The submission and remarks/statements contained herein also is in no way intended to substitute for the Examiner's own independent investigation. Nothing in this Submission or in any other Submission should be regarded as a disclaimer of claim scope. No remark/statement by Applicant or Applicant's related companies in this or any foreign proceeding should be regarded as a disclaimer or other surrender of claim scope in this proceeding.

E(2) Certification: No item of information contained in this information disclosure statement was cited in a communication from a foreign patent office in a counterpart foreign application, and, to the knowledge of the undersigned after making reasonable inquiry, no item of information contained in the information disclosure statement was known to any individual designated in § 1.56(c) more than three months prior to the filing of the information disclosure statement.

Applicant Statement on the Petition For Inter Partes Review of US 11,254,491

A Petition For Inter Partes Review ("IPR Petition") was filed by Petitioner Nespresso USA, Inc. against Applicant's commonly owned US Patent No. 11,254,491. A copy of the IPR Petition is submitted herewith as NPL Cite No. 1. As noted on page 82 of the IPR Petition, "Nestlé USA,

IPR2024-00257
Nespresso USA, Inc. Ex. 1002
ALL REFERENCES CONSIDERED EXCEPT WHERE LINED THROUGH. /J.C/ Page 584 of 598

Inc., Nestlé Nespresso SA, and Société Des Produits Nestlé SA are real parties-in-interest with Petitioner" Nespresso USA, Inc.

I. Alleged Lack of Entitlement to the Priority Date

In the IPR Petition, Petitioner again raises a lack of entitlement to the priority date, a topic that Petitioner has previously raised in three (3) prior IPR Petition filings against Applicant's other patents in this patent family, which the USPTO PTAB declined to institute and also denied Petitioner's rehearing requests. The Examiner is kindly encouraged to review the 3 previous IPR Petition filings, which Applicant has made available in previous IDS submissions, the PTAB decisions denying institution of Petitioner's 3 previous IPR filings, and the PTAB subsequent rehearing denials, all of which can be easily accessed from the USPTO PTAB website under the following AIA Review Numbers:

- IPR2021-01221
- IPR2021-01222
- IPR2021-01223

The topic of priority entitlement has also been discussed and addressed numerous times by Applicant in detail and on the record in multiple communications with the USPTO in multiple patent applications in this patent family. For example, Applicant's discussions with the USPTO regarding priority can be found in at least the following applications in this patent family:

- US 16/538,752 (now US Patent No. 10,858,176): See Applicant remarks filed on July 27, 2020.
- US 16/860,441 (now US Patent No. 10,870,531): See Applicant remarks filed on October 13, 2020.
- US 17/670,629 (now US Patent No. 11,465,829): See Interview Summary Dated July 05, 2022; Applicant remarks filed on July 15, 2022; and the Examiner's comment included in the Notice of Allowance dated August 12, 2022.
- US 17/670,765 (now US Patent No. 11,465,830): See Interview Summary Dated July 05, 2022; Applicant remarks filed on July 15, 2022; and the Examiner's comment included in the Notice of Allowance dated August 11, 2022.

- US 17/547,363: See Interview Summary Dated June 17, 2022; Applicant remarks filed on July 01, 2022; and the Examiner's comment included in the Notice of Allowance dated July 19, 2022.

II. Petition Grounds

The newly filed IPR Petition relies on two (2) grounds, which are summarized on page 30 of the IPR Petition. The grounds rely on a combination of references including: Yoakim (US2010/0239734A1), Jarisch (US2013/0064929A1), Rossi (WO2010/099806A1), and Castellani (US2008/0105131). Petitioner acknowledges on Page 19 of the IPR Petition that these references "were all cited, directly or indirectly, in a series of IDSs" by Applicant.

Petitioner also cites more than 3 pages of references and documents in Petitioner's Exhibit List on pages x-xiii of the IPR Petition, many of which have also already been before the Office in various IDS submission and previous IPR filings. Nonetheless, Applicant respectfully requests the Examiner review the references and documents in Petitioner's Exhibit List.

A. The Jarisch Reference (US2013/0064929A1)

The IPR Petition relies on the Jarisch Reference (US2013/0064929A1) in both grounds. Because Applicant believes it is entitled to at least the September 2010 priority date, the Jarisch reference is not prior art. However, Applicant notes that the Jarisch reference was considered by several different USPTO Examiners in various art units examining Applicant's other co-pending Applications, which ultimately issued as numerous US Patents (See References Cited in US Patent Nos. US10,858,176; US10,858,177; US10,870,531; US10,994,923; US11,465,829; US11,465,830; 11,230,430). The Jarisch reference has also been presented to the Office in Applicant's other pending US Applications currently undergoing examination (See US 15646980 and US 17844372). The Jarisch reference was also presented in Petitioner's 3 prior IPR Filings.

B. The Rossi Reference (WO 2010/099806)

Petitioner alleges in the IPR Petition that the Rossi reference WO 2010/099806 contains disclosure of the patentable subject matter that was identified by the US Examiner in 17/383,951 (See non-final office action dated 11-29-2021; i.e., a pump controlled to supply water into the single-serve capsule only upon detection of the identifier by the sensor/detector and a

determination by the beverage machine that the single-serve capsule is suitable for use with the beverage machine.). Applicant notes that the Rossi reference was relied upon by a USPTO Examiner in an office action in another application in this patent family - US 16/538,752, now US Patent No. 10,858,176 (See Non-Final Office Action dated November 08, 2019). Applicant respectfully requests the Examiner undertake an independent review of the Rossi reference and consider the Rossi teachings, as interpreted in the IPR Petition. Applicant makes no statement or disclaimer on the Rossi teachings or how it is interpreted by Petition in the IPR Petition. Lastly, Applicant requests the Examiner monitor the status of IPR2022-01574.

To the extent that the Examiner desires any further information on any of the documents or remarks included in this IDS, the Examiner is kindly requested to inform the Undersigned, who can be reached via direct dial telephone at 248-309-3045.

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), by mail or fax, or via EFS-Web.

By mail, send to: Mail Stop ISSUE FEE
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450

By fax, send to: (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

25215 7590 09/12/2022

The Dobrusin Law Firm P.C.
29 W. Lawrence Street
Suite 210
Pontiac, MI 48342

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission

I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being transmitted to the USPTO via EFS-Web or by facsimile to (571) 273-2885, on the date below.

3. ASSIGNEE NAME AND RESIDENCE DATA TO BE PRINTED ON THE PATENT (print or type)

PLEASE NOTE: Unless an assignee is identified below, no assignee data will appear on the patent. If an assignee is identified below, the document must have been previously recorded, or filed for recordation, as set forth in 37 CFR 3.11 and 37 CFR 3.81(a). Completion of this form is NOT a substitute for filing an assignment.

(A) NAME OF ASSIGNEE: K-FEE SYSTEM GMBH

(B) RESIDENCE: (CITY and STATE OR COUNTRY): Bergisch Gladbach, Germany

Please check the appropriate assignee category or categories (will not be printed on the patent) : ☐ Individual ☒ Corporation or other private group entity ☐ Government

4a. Fees submitted: ☒ Issue Fee ☐ Publication Fee (if required) ☐ Advance Order - # of Copies _____

4b. Method of Payment: *(Please first reapply any previously paid fee shown above)*

☒ Electronic Payment via EFS-Web ☐ Enclosed check ☐ Non-electronic payment by credit card (Attach form PTO-2038)

☒ The Director is hereby authorized to charge the required fee(s), any deficiency, or credit any overpayment to Deposit Account No. 50-1097

5. **Change in Entity Status** (from status indicated above)

☐ Applicant certifying micro entity status. See 37 CFR 1.29

☐ Applicant asserting small entity status. See 37 CFR 1.27

☐ Applicant changing to regular undiscounted fee status.

NOTE: Absent a valid certification of Micro Entity Status (see forms PTO/SB/15A and 15B), issue fee payment in the micro entity amount will not be accepted at the risk of application abandonment.
NOTE: If the application was previously under micro entity status, checking this box will be taken to be a notification of loss of entitlement to micro entity status.
NOTE: Checking this box will be taken to be a notification of loss of entitlement to small or micro entity status, as applicable.

NOTE: This form must be signed in accordance with 37 CFR 1.31 and 1.33. See 37 CFR 1.4 for signature requirements and certifications.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

ISSUE NOTIFICATION

The projected patent number and issue date are specified above.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)

The Patent Term Adjustment is 0 day(s). Any patent to issue from the above-identified application will include an indication of the adjustment on the front page.

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Application Assistance Unit (AAU) of the Office of Patents Stakeholder Experience (OPSE), Stakeholder Support Division (SSD) at (571)-272-4200.

INVENTOR(s) (Please see PAIR WEB site http://pair.uspto.gov for additional inventors):

Marc Krüger, Bergisch Gladbach, GERMANY;

APPLICANT(s) (Please see PAIR WEB site http://pair.uspto.gov for additional applicants):

K-FEE SYSTEM GMBH, Bergisch Gladbach, GERMANY;

The United States represents the largest, most dynamic marketplace in the world and is an unparalleled location for business investment, innovation, and commercialization of new technologies.
