

FOR ALL YOUR DRILLING AND COMPLETION NEEDS

BRIDGING THE GAP BETWEEN ENGINEERING AND OPERATIONS

About Us

WELL SITE COMPLETION EXPERTS

Our partners background originates both from the drilling and completion side with a combined 40 plus years of consulting experience. We have experience throughout the United States from Pennsylvania to California. We have worked in all of the big plays; including the Marcellus, Utica, Haynesville, Woodford, Eagle Ford, Permian, Bakken, Denver-Julesburg, Powder River, Green River, Wasatch, and the Monterey. After working years together in these various areas we have come together as a team to supply consulting services to these basins we have so much experience in. We want to apply this experience by helping operators begin new projects in areas that they do not have prior experience with. We know that the experience we have gained saves our clients the headaches that others have already endured during exploration.

We have learned how important relationships are in this industry. We have created a vast network of consultants and specialists that we have worked with or has helped us with finding solutions. We know not every problem has one solution and our vast team helps us to decide how we should respond. That is why we want to recommend the right guy for what operations you are performing. Let us help you on your next project and we are sure you will enjoy the Xperience.
