INSIDER TODAY

Samsung's new [Galaxy S20 lineup](#) comes with two new features that may sound familiar to iPhone owners: video chatting that's built directly into the phone app, and the ability to quickly share files wirelessly.

That's because the phones, which Samsung unveiled on Tuesday, come with [Google's Duo video-chatting service](#) baked directly into the phone's dialer, and will also support a new feature called Quick Share for easily sharing files between Samsung devices.

Both additions fill a gap in [Samsung's lineup](#) that the iPhone has offered for years. Although Galaxy device owners have a variety of video-chat apps available to download, from Google's Duo to Microsoft's Skype and Facebook's Messenger, the new Duo integration means such functionality is now directly integrated into the phone's dialer, messaging app, and contacts app. That should make it feel a lot more like Apple's FaceTime, which is built into the iPhone's phone and messages apps in addition to being available in a standalone app.

Samsung's Galaxy S20 devices will also come with a new feature called Quick Share, which allows users to share content like photos, videos, and files to other Galaxy device owners directly rather than through email or messaging. It sounds a lot like Apple's AirDrop, which uses Bluetooth and Wi-Fi to establish a peer-to-peer connection with other nearby compatible devices. Quick Share will work with other Galaxy devices, but the company has not yet said which devices beyond the [Galaxy S20 lineup](#) will support it.

The announcement comes as Google is rumored to be developing its own AirDrop-like feature for Android more broadly called Nearby Sharing, as [XDA Developers](#) recently discovered.

Samsung announced its new [Galaxy S20 lineup](#) during an event in San Francisco on Tuesday. All three phones will officially go on sale starting March 6, with the Galaxy S20 starting at \$1,000, the Galaxy S20 Plus starting at \$1,200, and the Galaxy S20 Ultra starting at \$1,400.
