

3GPP TSG RAN meeting #52
Bratislava, Slovakia, May 31 - June 3, 2011

RP-110855

Agenda Item: 3.
Source: ETSI MCC
Title: Report of 3GPP TSG RAN meeting #51,
Kansas City, USA, March 15 – 18, 2011
Document for: Approval

Report of 3GPP TSG RAN meeting #51

held in Kansas City, USA
March 15 – 18, 2011

The present document has been developed within the 3rd Generation Partnership Project (3GPP™) and it has not been subject to any approval process by the 3GPP Organizational Partners.

Keywords

RAN, UTRA, LTE

3GPP

Postal address

3GPP support office address

650 Route des Lucioles - Sophia Antipolis
Valbonne - FRANCE

Tel.: +33 4 92 94 42 00 Fax: +33 4 93 65 47 16

Contents

1	Opening of the Meeting (Tuesday 9 a.m.).....	8
2	Approval of the Agenda	8
3	Approval of the meeting report of TSG-RAN #50.....	8
4	Reminder for IPR declaration	8
5	RAN Chairman's Report of meetings.....	8
5.1	Report from TSG SA	8
5.2	Report from PCG and OP	9
5.3	Report from other meetings	9
6	Liaison activity of TSG RAN.....	9
6.1	Groups outside 3GPP	9
6.2	TSG SA, TSG CT, TSG GERAN	9
6.3	TSG RAN WG1, WG2, WG3, WG4, WG5	10
7	Election for chairman and vice chairman.....	11
8	ITU-R Ad hoc	11
8.1	Status report	11
8.2	Submission to ITU-R	11
8.2.1	ITU-R submission for IMT-Advanced.....	11
8.2.2	Other ITU-R submission	12
9	RAN WGs: WG Status Reports & CR Approvals Rel-99 to Rel-9	13
9.1	TSG RAN WG1	13
9.1.1	Report from RAN WG1 including report on actions required from the previous meeting	13
9.1.2	Discussions on decisions from RAN WG1	14
9.1.3	Approval of CRs to Rel-99, Rel-4, Rel-5, Rel-6 and Rel-7 with linked CRs	14
9.1.4	Approval of CRs to Rel-8.....	14
9.1.4.1	CRs for LTE [LTE-Phys]	14
9.1.4.2	Other Closed Work Items and Small Technical Enhancements and Improvements [TEI8].....	14
9.1.5	Approval of CRs to Rel-9.....	14
9.1.5.1	CRs related to LTE	14
9.1.5.2	Other Closed Work Items and Small Technical Enhancements and Improvements [TEI9].....	14
9.1.6	Approval of linked CRs where the leading one originated from RAN WG1	14
9.2	TSG RAN WG2.....	14
9.2.1	Report from RAN WG2 including report on actions required from the previous meeting	14
9.2.2	Discussions on decisions from RAN WG2	15
9.2.3	Approval of CRs to Rel-99, Rel-4, Rel-5, Rel-6 and Rel-7 with linked CRs	17
9.2.4	Approval of CRs to Rel-8.....	17
9.2.4.1	CRs for LTE [LTE-L23].....	17
9.2.4.2	Other Closed Work Items and Small Technical Enhancements and Improvements [TEI8].....	18
9.2.5	Approval of CRs to Rel-9.....	18
9.2.5.1	CRs related to LTE	18
9.2.5.2	Other Closed Work Items and Small Technical Enhancements and Improvements [TEI9].....	19
9.2.6	Approval of linked CRs where the leading one originated from RAN WG2	21
9.3	TSG RAN WG3	21
9.3.1	Report from RAN WG3 including report on actions required from the previous meeting	21
9.3.2	Discussions on decisions from RAN WG3	21
9.3.3	Approval of CRs to Rel-99, Rel-4, Rel-5, Rel-6 and Rel-7 with linked CRs	21
9.3.4	Approval of CRs to Rel-8	21
9.3.4.1	CRs for LTE [LTE-interfaces].....	21
9.3.4.2	Other Closed Work Items and Small Technical Enhancements and Improvements [TEI8].....	21
9.3.5	Approval of CRs to Rel-9.....	21
9.3.5.1	CRs related to LTE	21
9.3.5.2	Other Closed Work Items and Small Technical Enhancements and Improvements [TEI9].....	22
9.3.6	Approval of linked CRs where the leading one originated from RAN WG3	22
9.4	TSG RAN WG4.....	22
9.4.1	Report from RAN WG4 including report on actions required from the previous meeting	22

9.4.2	Discussions on decisions from RAN WG4	23
9.4.3	Approval of CRs to Rel99, Rel-4, Rel-5, Rel-6 and Rel-7 with linked CRs	26
9.4.4	Approval of CRs to Rel-8.....	27
9.4.4.1	CRs for LTE [LTE-RF]	27
9.4.4.2	Other Closed Work Items and Small Technical Enhancements and Improvements [TEI8].....	27
9.4.5	Approval of CRs to Rel-9.....	27
9.4.5.1	CRs related to LTE.....	27
9.4.5.2	Other Closed Work Items and Small Technical Enhancements and Improvements [TEI9].....	27
9.4.6	Approval of linked CRs where the leading one originated from RAN WG4.....	28
9.5	TSG RAN WG5.....	28
9.5.1	Report from RAN WG5 including report on actions required from the previous meeting	28
9.5.2	Discussions on decisions from RAN WG5	28
9.5.3	Approval of CRs to Rel99, Rel-4, Rel-5, Rel-6 and Rel-7 with linked CRs	28
9.5.4	Approval of CRs to closed Rel-8 & REL-9 Wis	29
9.5.4.1	CRs for LTE [LTE-UEConTest_RF, LTE-UEConTest_SIG].....	29
9.5.4.2	Other Closed Work Items and Small Technical Enhancements and Improvements [TEI8_Test, TEI9_Test].....	30
9.5.5	Approval of linked CRs where the leading one originated from RAN WG5.....	30
10	Open Conformance Testing Work Items (Rel-7 and beyond).....	31
10.1	Conformance test aspects – UMTS-LTE 3500	31
10.1.1	Conformance test aspects – LTE 3500 [LTE-UEConTest_LTE3500].....	31
10.1.2	Conformance test aspects – UMTS 3500 [RInImp-UEConTest_UMTS3500].....	31
10.2	Conformance test part: Fixed Wireless Customer-Premises Equipment (CPE) RF Requirements [FW_CPE_RF-UEConTest]	31
10.3	Conformance Test Aspects – LTE Positioning [LCS_LTE_UEConTest].....	31
10.4	AGNSS test case development for UMTS [AGNSSTest_UTRAN].....	32
10.5	Conformance Test Aspects - CT1 aspects of IMS Emergency Calls over GPRS and EPS [IMS_EMER_GPRS_EPS_UEConTest]	32
10.6	Conformance Test Aspects – Multiple Band and Multiple Frequency operation for LCR TDD [LCRTDD_MB_MF_UEConTest].....	32
10.7	Conformance Test Aspects – Enhanced Dual-layer transmission for LTE TDD [LTEimp-eDL_UEConTest]	33
10.8	Conformance Test Aspects – Combination of DC-HSDPA with MIMO [RANimp-DC_MIMO_UEConTest]	33
10.9	Conformance Test Aspects – Home NB enhancements for FDD [EHNb-UTRA_FDD_UEConTest].....	33
10.10	Conformance Test Aspects – Home eNB enhancements [EHNb-LTE_UEConTest].....	34
10.11	Conformance Test Aspects – MBMS support in LTE [MBMS_LTE-UEConTest]	34
10.12	Conformance Test Aspects: Small Technical Enhancements and Improvements for Rel-9 [TEI9_Test]	34
11	Work Items with target Rel-10 (not related to conformance testing).....	34
11.1	Closed REL-10 work items and TEI10 CRs.....	34
11.1.1	1.28 Mcps TDD Repeater [RANimp-Repeater1.28TDD]	35
11.1.2	1.28Mcps TDD Home NodeB RF requirements	35
11.1.2.1	Core part [HNB_LCRTDD_RF-Core]	35
11.1.2.2	Performance part [HNB_LCRTDD_RF-Perf].....	35
11.1.3	Performance Requirements for two-antenna 1.28Mcps TDD Type 1 & 2 UE receiver.....	35
11.1.3.1	Core part [2ant_UE_LCR_TDD-Core]	35
11.1.4	LTE TDD in 2600MHz for US (Region 2)	35
11.1.4.1	Core part [LTE_TDD_2600_US-Core].....	35
11.1.4.2	Performance part [LTE_TDD_2600_US-Perf].....	35
11.1.5	AGNSS Minimum Performance for UTRAN [AGNSSPerf_UTRAN]	35
11.1.6	1.28Mcps TDD Multi-carrier HSUPA [TDD_MC_HSUPA]	35
11.1.7	MU-MIMO for 1.28Mcps TDD	35
11.1.7.1	Core part [MUMIMO_LCR_TDD-Core].....	36
11.1.8	Interfrequency detected set measurements for UMTS [Interf_dset_meas_UMTS]	36
11.1.9	Small Technical Enhancements and Improvements for Rel-10 [TEI10].....	36
11.2	Open UTRA related Wis.....	37
11.2.1	UE Over the Air (Antenna) conformance testing methodology- Laptop Mounted Equipment Free Space test [UEAnt_FSTest]	37
11.2.2	Four carrier HSDPA.....	37
11.2.2.1	Core part [4C_HSDPA-Core].....	37

11.2.2.2	Performance part [4C_HSDPA-Perf]	37
11.2.3	Inclusion of “RF Pattern Matching Technologies” as positioning method in the UTRAN.....	38
11.2.3.1	Core part [LCS_UMTS_RFPMT-Core]	38
11.2.4	MU-MIMO for 1.28Mcps TDD	38
11.2.4.1	Performance part [MUMIMO_LCR_TDD-Perf]	38
11.2.5	Performance Requirements for two-antenna 1.28Mcps TDD Type 1 & 2 UE receiver.....	38
11.2.5.1	Performance part [2ant_UE_LCR_TDD-Perf]	38
11.2.6	Support of New Band Combinations for Dual-Band Dual Cell HSDPA	39
11.2.6.1	Core part [DB_DC_HSDPA-Core]	39
11.2.7	MIMO operation with non-MIMO coexistence in HSDPA	40
11.2.7.1	Core part [MIMO_HSDPA-Core]	40
11.2.7.2	Performance part [MIMO_HSDPA-Perf].....	40
11.2.8	Automatic Neighbour Relation (ANR) for UTRAN	41
11.2.8.1	Core part [ANR_UTRAN-Core]	41
11.2.9	Enhancements of Iur-g interface – RAN part.....	41
11.2.9.1	Core part [EIurg-RAN].....	41
11.3	Open UTRA & LTE related Wis	42
11.3.1	UMTS/LTE 3500 MHz [RInImp8-UMTSLTE3500].....	42
11.3.2	Minimization of drive tests for E-UTRAN and UTRAN	42
11.3.2.1	Core Part [MDT_UMTSLTE-Core].....	42
11.3.3	HNB and HeNB Mobility Enhancements	43
11.3.3.1	Core part [HNB_HENB_mob_enh-Core]	43
11.3.4	Expanded 1900 MHz Band for UTRA and LTE.....	43
11.3.4.1	Core part [E1900-Core].....	44
11.3.4.2	Performance part [E1900-Perf].....	44
11.3.5	Multi-standard radio BS RF requirements for non-contiguous spectrum deployments	44
11.3.5.1	Core part [MSR_NC-Core]	44
11.3.5.2	Performance part [MSR_NC-Perf]	45
11.3.6	RAN mechanisms to avoid CN overload due to Machine-Type Communications [NIMTC- RAN_overload]	45
11.3.6.1	Voting about Rel-10 MTC approaches.....	46
11.3.7	Extending 850 MHz Upper Band (814 – 849 MHz)	46
11.3.7.1	Core part [e850_UB-Core]	46
11.3.7.2	Performance part [e850_UB-Perf].....	47
11.4	Open LTE related Wis	48
11.4.1	Fixed Wireless Customer-Premises Equipment (CPE) RF Requirements	48
11.4.1.1	Core part [FW_CPE_RF-Core]	48
11.4.1.2	UE conformance testing part [FW_CPE_RF-UEConTest]	49
11.4.2	Enhanced Downlink Multiple Antenna Transmission for LTE.....	49
11.4.2.1	Core part [LTE_eDL_MIMO-Core].....	49
11.4.2.2	Performance part [LTE_eDL_MIMO-Perf]	49
11.4.3	UL multiple antenna transmission for LTE.....	49
11.4.3.1	Core part [LTE_UL_MIMO-Core].....	49
11.4.3.2	Performance part [LTE_UL_MIMO-Perf]	50
11.4.4	Carrier Aggregation for LTE	51
11.4.4.1	Core part [LTE_CA-Core].....	51
11.4.4.2	Performance part [LTE_CA-Perf]	52
11.4.5	Relays for LTE.....	52
11.4.5.1	Core part [LTE_Relay-Core].....	53
11.4.5.2	Performance part [LTE_Relay-Perf]	53
11.4.6	Enhanced ICIC for non-CA based deployments of heterogeneous networks for LTE.....	53
11.4.6.1	Core part [eICIC_LTE-Core]	53
11.4.6.2	Performance part [eICIC_LTE-Perf]	54
11.4.7	Adding 2 GHz band LTE for ATC of MSS in North America	54
11.4.7.1	Core part [S_Band_LTE_ATC_MSS-Core].....	54
11.4.7.2	Performance part [S_Band_LTE_ATC_MSS-Perf]	55
11.4.8	Adding L-Band LTE for ATC of MSS in North America	55
11.4.8.1	Core part [L_Band_LTE_ATC_MSS-Core]	56
11.4.8.2	Performance part [L_Band_LTE_ATC_MSS-Perf]	57
11.4.9	LTE Self Optimizing Networks (SON) enhancements	57
11.4.9.1	Core part [SONenh_LTE-Core]	57
11.4.10	LTE-Advanced Carrier Aggregation of Band 3 and Band 7	58

11.4.10.1	Core part [LTE_CA_B3_B7-Core]	58
11.4.10.2	Performance part [LTE_CA_B3_B7-Perf]	58
11.4.11	Further enhancements to MBMS for LTE	58
11.4.11.1	Core part [MBMS_LTE_enh-Core]	58
11.4.12	Service continuity in connected mode and location information for MBMS for LTE	59
11.4.12.1	Core part [MBMS_LTE_SC-Core]	59
12	Work Items with target Rel-11 and beyond (not related to conformance testing)	60
12.1	Open UTRA related Wis	60
12.1.1	Eight carrier HSDPA	60
12.1.1.1	Core part: [8C_HSDPA-Core]	60
12.1.1.2	Performance part: [8C_HSDPA-Perf]	60
12.1.2	UE demodulation performance requirements under multiple-cell scenario for 1.28Mcps TDD	60
12.1.2.1	Performance Part [LCR_TDD_UE_demod_mc-Perf]	61
12.1.3	Uplink Transmit Diversity for HSPA [New WI: HSPA_UL_TxDiv]	61
12.1.3.1	Closed Loop Core Part [HSPA_UL_TxDiv-CL-Core]	61
12.1.3.2	Closed Loop Performance Part [HSPA_UL_TxDiv-CL-Perf]	61
12.1.3.3	Open Loop Core part [HSPA_UL_TxDiv-OL-Core]	61
12.1.3.4	Open Loop Performance part [HSPA_UL_TxDiv-OL-Perf]	61
12.2	Open UTRA & LTE related Wis	62
12.3	Open LTE related Wis	62
12.3.1	Network-Based Positioning Support for LTE	62
12.3.1.1	Core Part [LCS_LTE-NBPS-Core]	62
12.3.1.2	Performance Part [LCS_LTE-NBPS-Perf]	62
12.3.2	LTE Advanced Carrier Aggregation of Band 4 and Band 17	62
12.3.2.1	Core part [LTE_CA_B4_B17-Core]	62
12.3.2.2	Performance part [LTE_CA_B4_B17-Perf]	63
12.3.3	LTE Advanced Carrier Aggregation of Band 4 and Band 13	63
12.3.3.1	Core part [LTE_CA_B4_B13-Core]	63
12.3.3.2	Performance part [LTE_CA_B4_B13-Perf]	63
13	Study Items	63
13.1	Study on Measurement of Radiated Performance for MIMO and multi-antenna reception for HSPA and LTE terminals [FS_HSPA_LTE_measRP_MIMO_multi-antenna]	63
13.2	Study on Extending 850MHz [FS_e850]	64
13.3	Study on RAN improvements for Machine-Type Communications [FS_NIMTC_RAN]	64
13.4	Study on Coordinated Multi-Point Operation for LTE [FS_COMP_LTE]	65
13.5	Study on Network Energy Saving for E-UTRAN [FS_Energy_LTE]	66
13.6	Study on signaling and procedure for interference avoidance for in-device coexistence [FS_SPIA_IDC]	66
13.7	Study on UE Application Layer Data Throughput [FS_UE_App_Data_Perf]	66
13.8	Study on Uplink MIMO [FS_UTRA_UL_MIMO]	66
13.9	Study on HSDPA multipoint transmission [FS_HSDPA_MP_TX]	66
13.10	Study on Inclusion of RF Pattern Matching as a positioning method in the E-UTRAN [FS_LCS_LTE_RFPMT]	67
13.11	Closed study items	67
14	New Work Items/Study Items	67
14.1	New Work Items	68
14.2	New Study Items	76

15	Technical co-ordination among WGs.....	79
16	Outputs to other groups	79
17	Project management.....	81
18	Future meeting schedule.....	81
19	Any other business	81
20	Closing of the meeting (No later than Friday 1 p.m.)	82
Annex A:	List of participants.....	83
Annex B:	List of Tdocs	88
Annex C:	Incoming liaison statements (LSin)	107
Annex D:	Approved Outgoing liaison statements (LSout)	109
Annex E:	List of Change Requests (CRs)	110
Annex F:	Summary of RAN work items (WI) and study items (SI)	149
Annex G:	Actions decided by RAN #51.....	150

1 Opening of the Meeting (Tuesday 9 a.m.)

- The meeting was opened by Nakamura-san, the RAN chair on Tuesday, 15th of March 2011 at 9a.m.
- One minute of silence was observed on the memory of all victims of the recent events in Japan and other parts of the world (new Zealand, china, ...)
- Marc Lipford, on behalf of Sprint, welcomed the delegates to Kansas City.

2 Approval of the Agenda

RP-110001	Agenda	Agenda for RAN #51	RAN chairman (NTT DOCOMO)
---------------------------	--------	--------------------	---------------------------

- Time alignment with CT group is required to allow delegates to attend the CT election (The Election is scheduled on Thursday).
- Priority on the WIs/SIs approval needs to be considered and companies were invited to only maintain their proposal if it is strongly needed.

Status: approved

3 Approval of the meeting report of TSG-RAN #50

RP-110361	Report	Report of RAN#50 meeting	MCC
---------------------------	--------	--------------------------	-----

Status: Approved

4 Reminder for IPR declaration

The attention of the delegates to the meeting of this Technical Specification Group is drawn to the fact that 3GPP Individual Members have the obligation under the IPR Policies of their respective Organizational Partners to inform their respective Organizational Partners of Essential IPRs they become aware of.

The delegates are asked to take note that they are thereby invited:

- to investigate whether their organization or any other organization owns IPRs which were, or were likely to become Essential in respect of the work of 3GPP.
- to notify their respective Organizational Partners of all potential IPRs, e.g., for ETSI, by means of the IPR Statement and the Licensing declaration forms (<http://webapp.etsi.org/Ipr/>).

5 RAN Chairman's Report of meetings

5.1 Report from TSG SA

RAN#50 report

I presented my report in SA-100840.

Relay security

It was decided that SA3 continue their work on this. We need to wait for conclusion of SA3 meeting in January. Results of the SA3 meeting in January will be informed to relevant groups including RAN WGs and RAN. At SA#51, status will be reviewed and SA will make a final decision whether Relay can be REL-10 or postponed to REL-11.

LS in SP-100874 will be sent from SA to relevant groups including RAN, ITU-R AH, RAN1, RAN2, RAN3 and RAN4 to liaise the discussion results at SA#50. In this LS, SA recommends that Relay specs are not included in IMT-Advanced ITU-R submission, i.e. GCS, due to this uncertainty of completion of Relay features within REL-10.

LS from DVB project

According to TSG-RAN proposal, it was decided to have a joint session between RAN and CT on March 16(Wed) 11:00 am –12:00 pm, i.e. in the week of the next RAN plenary, and DVB Project will be invited to the session. Based on the information from DVB, we need to prepare RAN's recommendation on the way forward and provide it to SA#51 for decision. LS back to DVB project was sent from SA in SA-100870 to inform above SA decision.

Scope of REL-11 MTC

At RAN#50, a concern on the scope of REL-11 MTC was raised. Other groups have same concern and we had a discussion on this issue at SA#50. It was decided that:

- SA WG1 were asked to provide priorities in SIMTC Features for Rel-11 to SA WG2.
- SA WG1 and SA WG2 should try to group the work into logical groups in order to organize the feature into independently completing parts.
- SA WG1 and SA WG2 are asked to provide inputs to the March 2011 TSG SA meeting, in order for a prioritization exercise to be performed.

LS from NGMN

This LS was treated both at RAN#50 and SA#50.

It was decided that LS back should be sent at SA#51 considering discussion results at RAN#51 on FGI bit.

TR 21.905 (TR on 3GPP vocabulary)

It was decided that the ownership was moved from SA1 to SA.

5.2 Report from PCG and OP

5.3 Report from other meetings

6 Liaison activity of TSG RAN

6.1 Groups outside 3GPP

RP-110007	LS in	LS on E-UTRA BS emission limits in European Harmonised Standards	ETSI MSG
---------------------------	-------	--	----------

RAN4 chairman: This LS was handled by RAN4 in the Taipei meeting (RAN4#57AH), and RAN4 already started the work on this subject.

→ RAN4 will reply to this LS with RAN in Cc.

Status: Noted

RP-110201	Info	Information on band usage plan in 900 MHz band in Japan	ARIB
---------------------------	------	---	------

Status: Revised in 0322

RP-110322	Info	Information on band usage plan in 900 MHz band in Japan	ARIB
---------------------------	------	---	------

Status: Noted

6.2 TSG SA, TSG CT, TSG GERAN

RP-110010	LS in	Way forward on DVB-NGH and eMBMS convergence	3GPP TSG SA
---------------------------	-------	--	-------------

Presented by RAN chairman

Status: Noted

RP-110148	LS in	Reply LS on enabling detection of unnecessary IRAT HO for Gb-mode BSS	TSG GERAN
---------------------------	-------	---	-----------

Presented by Alcatel lucent

→ RAN3 groups will reply to this LS during their next meeting.

Status: Noted

RP-110150	LS in	LS on Management of MOCN supporting MSs/UEs in GERAN	TSG GERAN
---------------------------	-------	--	-----------

Presented by Alcatel Lucent

Status: Noted

6.3 TSG RAN WG1, WG2, WG3, WG4, WG5

RP-110144	LS in	LS on support for dual band DC-HSDPA+MIMO	TSG RAN WG2
---------------------------	-------	---	-------------

Presented by Huawei.

Qualcomm: there are two alternatives and one of them proposes a Cat B CR to rel-9. Unless the feature is extremely critical, Qualcomm prefers to have features introduced only in rel-10 CR not in rel-9.

Chair: evening session will be held to discuss the FGI bit and the release to which the CR should go.

→ LS and corresponding CRs will be treated in an evening ad-hoc session.

Status: Noted

RP-110220	LS in	LS on Rel-10 RAN2 UTRA features	TSG RAN WG2
---------------------------	-------	---------------------------------	-------------

Presented by Ericsson.

The LS will be retreated in the ad-hoc evening session

Status: Noted

RP-110018	LS in	LS on CRs for MSR specifications	TSG RAN WG4
---------------------------	-------	----------------------------------	-------------

Presented by Ericsson

Status: Noted

RP-110146	LS in	Reply LS to "LS on CRs for MSR specifications"	TSG GERAN WG1
---------------------------	-------	--	---------------

Presented by Ericsson

Status: Noted

RP-110145	LS in	LS on UE support of handovers between LTE FDD and LTE TDD	TSG RAN WG5
---------------------------	-------	---	-------------

Presented by the RAN5 chair.

Status: Noted

RP-110014	LS in	Reply LS on CN node selection	TSG RAN WG2
---------------------------	-------	-------------------------------	-------------

Presented by Alcatel Lucent.

RAN2 chair: - SA2 sent a response LS.

- SA2 suggested the introduction of a 25th bit in addition to the 24 bits for LTE and there is a RAN2 CR that introduces this 25th bits. Some companies now think this bit is not necessary, so the CR might be pushed back to RAN2.

Status: Noted

7 Election for chairman and vice chairman

One candidate for RAN: Takehiro Nakamura.

Takehiro Nakamura is elected as RAN-chair for RAN, for the 2 coming years.

Three candidates for vice-chairman: Marc Grant, Han van Bussel and Hai TANG.

Marc Grant, Han van Bussel and Hai TANG are elected as vice-chairmen for TSG RAN, for the coming 2 years.

8 ITU-R Ad hoc

8.1 Status report

RP-110020	Report	Status Report ITU-R Ad hoc	ITU-R Ad Hoc Contact (Telecom Italia)
---------------------------	--------	----------------------------	--

Documents for ITU-R need to be reviewed.

Status: Noted

8.2 Submission to ITU-R

RP-110005	LS in	LS on the consideration of Relay Nodes in the LTE-Advanced material for Rec. ITU-R M.[IMT.RSPEC] to be submitted to ITU-R WP5D#10 (6-13 April, 2011)	RAN ITU-R Ad Hoc
---------------------------	-------	--	------------------

Status: Noted

RP-110006	LS in	LS on additional considerations of Relay Nodes in the LTE-Advanced material for Rec. ITU-R M.[IMT.RSPEC] to be submitted to ITU-R WP5D#10 (6-13 April, 2011)	RAN ITU-R Ad Hoc
---------------------------	-------	--	------------------

- This document is an update to RP-110005 to capture the SA3 decision on the security for relays and thus proposes an additional way forward in case relay are included in the submission to ITU-R.
- SA chair confirmed that discussion and decision on relay will take place on the first day of the SA plenary next week.

Status: Noted

8.2.1 ITU-R submission for IMT-Advanced

RP-110004	Info	Milestone 4 of RP-100939 fulfilled	MCC
---------------------------	------	------------------------------------	-----

Status: Noted

RP-110002	Approval	RT-110032, "LTE-Advanced" material for Rec. ITU-R M.[IMT.RSPEC] H146	TSG-RAN ITU-R AdHoc
---------------------------	----------	--	---------------------

The document is already approved by correspondence in TSG RAN/CT/SA and PCG

Telecom Italia: In the note in the first page we should mention the number of the agreed document from 3GPP (instead of RP-11YYYY) once this document is approved.

Chair: This document will be revised based in the discussion from SA concerning relays. A Tdoc was already reserved: (document RP-110141) for this revision.

➔ RP-110141 is the number to be put in the note before it is sent to ITU-R WP5D via Individual members.

Alcatel Lucent: does it make any difference to ITU-R to say if relay is supported or not? We think the current wording is sufficient.

Chair: Even if it is not mandatory to meet the IMT-advanced requirements, it is preferable to include it.

Fujitsu: 36.216 will not be presented to ITU, independently of SA. Is that the correct understanding?

Telecom Italia: The inclusion of the spec is subject to the approval of including relay in rel-10.

Fujitsu: In practice, even if there is acceptance for the work on relay to continue in rel-10 it won't be completed on time, so the status of 36.216 does not depend on the acceptance of relay on rel-10.

Status: Noted

RP-110003	Approval	RT-110018, "Supporting input for the OPs"	TSG-RAN ITU-R AdHoc
---------------------------	----------	---	---------------------

Already approved via correspondence

Status: noted

RP-110141	Approval	LTE-Advanced" material for Rec. ITU-R M.[IMT.RSPEC]	TSG-RAN ITU-R AdHoc
---------------------------	----------	---	---------------------

Status: approved

RP-110317	Approval	Draft accompanying letter for the submission of the Global Core Specifications (GCS) for Rec. ITU-R M.[IMT.RSPEC]	ITU-R Ad Hoc Contact Person
---------------------------	----------	---	-----------------------------

Was not included in the package of the documents submitted in the reflector for approval via correspondence.

➔ **It is Approved by RAN to use this cover sheet.**

Status: approved

8.2.2 Other ITU-R submission

RP-110151	LS in	Reply LS on "Wide area sensor and/or actuator network (WASN) systems"	TSG GERAN
---------------------------	-------	---	-----------

Status: Noted

RP-110318	Approval	Cover page for the submission to ITU-R WP5D of the revision of TR21.905	ITU-R Ad Hoc
---------------------------	----------	---	--------------

➔ **Cover page approved by RAN.**

Status: approved

RP-110319	LSout	Draft response to ITU-R WP5A on “Wide area sensor and/or actuator network (WASN) systems”	ITU-R Ad Hoc
---------------------------	-------	---	--------------

This LS needs to be approved by PCG level.

→ The LS Will be presented to SA for endorsement and then presented to PCG for approval.

Status: Approved

RP-110320	LSout	Draft response to ITU-R WP5A on “Quality of Service Requirements and Objectives for Wireless Access Systems”	ITU-R Ad Hoc
---------------------------	-------	--	--------------

→ Same handling (PCG approval) as 0319.

Status: Approved (RAN level)

RP-110321	LSout	Draft response to ITU-R WP5A on the Working Document towards a Preliminary Draft New Report ITU-R M.[LMS.PPDR.UHF TECH]	ITU-R Ad Hoc
---------------------------	-------	---	--------------

→ Same handling (PCG approval) as 0319

Status: approved (RAN level)

9 RAN WGs: WG Status Reports & CR Approvals Rel-99 to Rel-9

9.1 TSG RAN WG1

9.1.1 Report from RAN WG1 including report on actions required from the previous meeting

RP-110021	Report	Status Report RAN WG1	RAN1 chairman (Alcatel-Lucent)
---------------------------	--------	-----------------------	--------------------------------

LG: Comment on slide 16, regarding the sentence “*For TDD UL ACK/NACK on Un PUCCH, the same behaviour is supported as for non-CA UE operation*”.

RAN1 Chair: This captures the agreement from the reflector discussion output and it is better to continue this discussion on the RAN1 reflector.

Telecom Italia: some times RAN1 is providing features then it is difficult to define performance in RAN4. We should insure that there is a continuous process between WGs.

RAN1 chair: RAN should ensure that when a WI is approved for RAN1, RAN4 has the capacity to handle the WI. When an issue comes up during the work on a WI, an LS is sent and RAN4 is asked for feedback if it is feasible or not and if it can be completed with the timeline and RAN1 follows the recommendation from RAN4.

Chair: Clarification of the detailed split of work over WGs on the WID is good culture and should be continued.

Ericsson: has concerns on the work on CA. CA for hetnet is not working as it is not possible for the UE to synchronize to the S_Cell. There was no time to be back to it in Dublin. → . there is an issue that needs to be addressed.

RAN1 chair: this can be discussed during this week.

9.2.1 Report from RAN WG2 including report on actions required from the previous meeting

RP-110023	Report	Status Report RAN WG2	RAN2 chairman (Samsung)
---------------------------	--------	-----------------------	-------------------------

AT&T: asked for Clarification of the last sentence of slide 15 “*this feature does not require a capability bit even if optional*”

RAN2 chair: This is used for UE reporting after RLF happens: after re-establishment he can report. If the UE does not support this feature it would just not say it has some something to report.

AT&T: could it be understood as a dynamic way to indicate it has or has not this capability?

RAN2 chair: Yes.

ALU: what is the status of the hetnet mobility in RAN2 ?

RAN2 chair: from a RAN2 point of view, the work is done. There is an Liaison to RAN4 to inform that inter frequency support is required. But this will not be for rel-10 time frame.

ALU: And the discussion on simulation parameters ?

RAN chair: This is not related to eICIC. It is related to mobility from/to a pico-cell. We are still discussing if enhancements are needed. These simulations will not be finished quickly so it may end up in rel-11.

RAN2 Chair: on the issue on RLF for rel-9 (Slide 15): there is no paper in this and we need to decide if it is mandatory or optional.

NTT: discuss this in the ad-hoc session.

9.2.2 Discussions on decisions from RAN WG2

RP-110143	LS in	LS on Rel-10 LTE UE capabilities	TSG RAN WG2
---------------------------	-------	----------------------------------	-------------

was handled in the evening ad-hoc session.

Status: noted

RP-110203	Disc	Basic principles and way forward for deciding Rel-10 UE capabilities	NTT DOCOMO, INC.
---------------------------	------	--	------------------

Motorola: this is a reasonable proposal. However it seems that assumption is that all WGs finished the work. But this is not the case in RAN4. it is only after finishing the work in core and performance parts that we can understand some of the issues and whether this can be mandatory or optional.

NTT: it is critical that the work is completed including in RAN4. If there is any open issue including RAN4, then the feature can not be implemented. We need to decide if we need to introduce capability bit FGI or we keep it mandatory and in this case tolerate that Rel-10 may not be available.

Qualcomm: No issues in the principles as such. However we need to address the gain and the advantages of having a FGI again in rel-10. If we gain something then it is ok to have them. However if we don't gain anything then we should not have them and UE capabilities are sufficient.

NTT: it is difficult to speculate which feature will be implemented first. There are two perspectives:

- a) In order not to block any other feature because of mandating one particular feature, it seems to better make every thing optional.
 - b) from the other hand when looking into the operators' recommendation, they request a certain set of features to be mandatory. For these features there might be IUT problems if it is not sufficiently tested
- ➔ FGI is a kind of compromise between these two ends. The difference between FGI and UE capability is that With FGI there is a clear intention from the market to use these features in contrast to pure UE capabilities.

Ericsson: same view as Qualcomm.

Ericsson: when reading principle 2 and principle 1 the understanding it that we mandate the feature that, if not supported by all UEs, it will not work and all other features are optional. Is this the understanding also of the proponent ?

NTT: Principle 1 and 2 are some what contradicting. It depends on the level of perception whether a feature will or not work. We have to look at every individual feature wither to make it mandatory or optional.

RAN2 chair: All big features use the same approach as done in the past, they are all optional. FGI could play a rule in the sub-features.

Vodafone: question should be: do we have mandatory features in rel-10 or not?

RAN2 chair: FGI is for sub-feature only.

Teleocm Italia: disagree with what Qualcomm is proposing.

Orange: difficulty to have an open discussion among vendors. It is not feasible to disclose road-maps between vendors.

Ericsson: the intention of principle 5 ?

NTT: fix the FGI as far as possible at this stage. Not prohibit any further introduction of FGI later on but would like to avoid continuously proposing to have features optional or introduce FGI bit as this may seriously impact network implementation.

Qualcomm: It is important to understand inter-dependency between features when discussing the mandatory/optional aspect of a feature.

NTT: inter-dependency is important and RAN1 and RAN2 did their job on this aspect.

Fujitsu: proposes to “agree the document in principle”. Then spend the energy on discussing the details for each feature later on, Instead of a lot of debate for a long time on exact wording of the principles

Chair: More detailed discussion will be needed for every FGI bit. We need to have an agreement on the FGI bits.

After offline discussion:

NTT: it seems people are ok with the proposed way forward except from principle 6.

RP-110263	CR	Agreed and technically endorsed RAN2 CRs to TS 34.109 on Introduction of UE test loop mode 4 for testing of network initiated secondary PDP context	RAN2
---------------------------	----	---	------

Revisit after the compromise is reached.

After offline:

RAN2: rel-7 and rel-9 are agreeable and for rel-8 there is a compromise proposed

NEC: no consensus on the proposed compromise. Proposal is to keep rel-8 optional

Ericsson: only one company have a concern.

Sharp: - the compromise was made available late. Didn't have time to look at it. → can not be approved.
- Also some editorial issues.

Ericsson: - the CR was circulate for some days.
- Didn't receive any comment on the editorials from Sharp.

Kyocera: there is a confusion on things that are optional and conditionally mandatory.

Qualcomm: there is an issue with rel-8. Does not want to approve rel-7 and rel-9 without rel-8.
→ proposal is to minute in the report that rel-9 and rel-7 are agreed and keep decision together with rel-8.

NEC: either approve rel-8 as optional or send back to RAN2 with the whole package.

RAN2 will continue the work on whether mode 4 for testing to be optional or mandatory

Status: approved

9.4 TSG RAN WG4

9.4.1 Report from RAN WG4 including report on actions required from the previous meeting

RP-110027	Report	Status Report RAN WG4	RAN4 chairman (Fujitsu)
---------------------------	--------	-----------------------	-------------------------

Slide 5: title should be <R4#58 case>not R4#57

RAN5chair : Slide 11: CPE will stop in rel-10. would it start in rel-11?

RAN4 chair: will be discussed when Status Report of the WI will be presented

Ericsson: - in Slide 26, “Network-Based Positioning Support in LTE” is listed as a rel-10 WI, however this a rel-11 WI.
- Slide 27: some CRs for Phase 2 positioning test cases were presented but not agreed. The document listed (R4-111415, R4-111442) are for phase 1 positioning not phase 2.

Discussion on priority:

Nokia: supports the prioritization on the WIs proposed by the RAN4 chair: prioritizing the remaining open issues in rel-10 based on the approval of the exception sheets and the essential maintenance of previous release. Nokia proposes to send a clear message from RAN that these are the priorities and nothing else.

Chair: many issues are still open in RAN4. We should note this prioritization principle (i.e. Essential correction and rel-10 remaining open issues). Delegates are invited to accept this priority otherwise we wont be able to finish the rel-10

Qualcomm: regarding slide 31: what does it mean in practice? especially for new frequency bands and band combinations? Endorsing this principle would mean endorsing a “first come first serve” principle for these band combinations. this approach does not serve to address the market needs

RAN4: we should first fix the ongoing fundamental/generic combinations first not the individual ones. Finish these two combinations then start the discussion on the other individual combinations.

Chair: generic combinations should be prioritized.

Nokia: We should first finish the generic combinations. All other band combinations are to be introduced in rel-11 as release independent (non is intended to be finished by June). We should focus on the bands that will be finished on June with an exception sheet.

RAN4 chair: open issues with exception sheet will be having the highest priority in the coming two meetings.

Telecom Italia: agrees with Nokia. Priority should be given to open topics for release 10. rel-11 topics should be handled if and only if there is time.

Huawei: We need to find a sustainable solution going forward. A lot of RAN4 delegates are present in this meeting, we can work out a solution guarantee a quality work in RAN4.

US cellular:- invites the operators to work with the vendors outside the standard bodies in order to come to a convergence in advance so that to limit the time spent on discussing these combinations in RAN4.
- Support RAN4 chair position to have the Generic performance done.

AT&T: - also agrees on prioritizing the Generic combinations.
- RAN can not not approve band combination proposals. AT&T Supports the prioritization once they are approved.

Qualcomm: - agrees with the RAN4 chair approach to finish what has to be finished (rel-8/rel-9 corrections and rel-10 open issues).
- In slide 33, there are some rel-9 HSPA issues which are "to be confirmed". It is important also to close these issues.

RAN4 Chair : - the reason they are t.b.c is that some of them would be completed this time and also need to discuss further with some of the RAN4 delegates.

Telecom Italia: RAN should give a strong clear message on what to prioritize: rel-10. and rel-11 will be treated if there is time.

RAN4: proposal is to put rel-11 subject at the end of the agenda.

NSN: does not agree with this approach. It is important for companies to know well before hand if a point of the agenda will be taken or not even if this is at the end of the agenda in order to prepare the meeting in an efficient way.
(contributions and comments to other companies' contributions)

Motorola (RAN4 vice-chair): we should be careful when saying we will not treat any rel-11 subject. There are some aspects which are important and needed as soon as possible and that can be closed more easily than band combinations.
➔ Leave flexibility to the chairman.

TeliaSonera: these are micromanagement. We should leave that to RAN4 leaders. we need to leave some flexibility to RAN4 leadership.

Way forward: (a written summary to be submitted to RAN4).

By June meeting RAN4 should focus on :

Essential correction, remaining open issues in rel-10 WIs (ECD set on june)

- open issues stated in the granted exception sheet
- core part
- performance part

Ongoing study items (e.g. MIMO-OTA)

9.4.2 Discussions on decisions from RAN WG4

RP-110313	Disc	On how to address RAN4 overload on new bands & band combinations	Qualcomm Incorporated
---------------------------	------	--	-----------------------

RAN chair: This addresses the rel-11 new band combinations work.

➔ Have offline discussion on this and this will be addressed in June plenary. This kind of proposals will be treated on June.

- with respect to the sentence “approve all WIs” in the conclusions of the document ➔ approval or not of WI will be based on the discussion.

Deutsche Telekom: Problem in RAN4, is that all band combinations are handled separately.

➔ Generic issues to be handled in a generic way.

AT&T: Agrees with Deutsche Telekom and also there are some bands that can be merged but this can only be known when the work starts on these bands.

Telecom Italia: it is the scope of the current generic work in rel-10 CA to derive common rules to be used for the different band combinations. Is that the correct understanding ?

Nokia: This was the intention originally. But in practice, there was delays due to work load w.r.t to the time plan. RAN4 focused on Intra-band contiguous work but the work on Inter-band in the generic cases didn't really progressed.

Telecom Italia: put on priority that RAN4 finishes the generic combinations from now to June to have a common baseline to insure avoiding duplication of work in rel-11.

Orange: supportive of some of Qualcomm points, in particular having balance between regions.

- on the generic requirements: inter-band is missing in rel-10 and should be prioritized until June. However it would be difficult to derive specific requirements from these generic requirements for specific combinations. (Combination in inter-band generic case is high – low but there are combinations which are low-low or high-high).

US cellular: concurs with Qualcomm presentation and most of the proposed can be done offline.

Verizon: it is clear that there is a common understanding that on the coming 3 months we should focus on the generic requirement to have CA finished for rel-10. However, the inter band case, band 1 band 5, didn't progress much in the past year even though there was no agreement to deprioritize this combination and if we continue in the same way even in June we can be in the situation that inter-band work didn't progress.

We need to discuss in the RAN plenary how to progress the work.

RAN chair: We should stick to the generic scenario or we will not finish any thing by June.

CMCC: just postpone the discussion until next meeting will not help much. may be request RAN4 to provide input to the next RAN plenary

RAN chair: RAN4 will be very busy finishing the rel-10 work. Companies are invited to submit ideas for the next meeting.

Qualcomm: no intention to conclude any thing in this meeting. Can we at least try to agree that we will establish some process and it will not be first come first served ?

RAN guidance: to be discussed with the RAN4 leaders and this will be used as the starting point for a discussion on the RAN reflector.

Lorenzo (Qualcomm) will lead the discussion.

A F2F discussion took place this week.

Status: Noted

RP-110388	Disc	Prioritization of RAN4 work	RAN4 chairman (Fujitsu)
-----------	------	-----------------------------	-------------------------

Huawei: in slide1, the last bullet, why do we need to carry on the SI on e850 ? the Upper part WI is already approved and the other for lower part will be approved. There will not be any other generic band to be out of this SI.

- On slide 4: what is meant by “(very limited exception chair discretion)”?

RAN4 chair: the Status report for e850 will be reviewed and if RAN agrees to close the SI then it is fine. Agenda will be based on the consequences of this discussion.

- on the meaning of the sentence, this slide captures an example: for example response to an already submitted document.

Ericsson: generally agrees with the proposal.

- slide 2: in bullet 4 (i.e. RF items subject to ITU-R submission), we should specify that for UL-MIMO it is for core requirements.
- Regarding eDL MIMO, all the core part is completed. Thus for ITU-R we are done. → This can be taken out.
- General comment for the performance: it is agreed that we need to define the framework by June. We need to make sure that RAN4 completes the framework as intended.
- e850: RAN didn't decide yet on the approval of the lower part. Also, there are some co-existence issues that needs to be addressed thus it is important to complete the lower part under the SI.

NSN: - The agenda should only contain the points that will be treated on the meeting week. Companies need to prepare for the subjects that are treated and responses to other companies contributions. So a subject is either in the agenda or out.

- Why do we need to review the proposal in the RAN4 reflector ? all interested parties are present here so we can decide.

ALU: is slide 3 the slide that defines the way forward? Some Core items are missing from the prioritization in Slides 3 and 4.

RAN4 chair: → to comment from Nokia: agenda will be fixed on Friday next week.

- Review by RAN4 is needed because some companies are not present here (e.g. Japanese companies)
- to question from ALU: This is the list to be handled in Shanghai. The list of priority.

Qualcomm: slide 6 states that priority is given to open issues in rel-10 core and performance and in slide 3 says priority for RRM corresponding to RF. what about those subjects that does not have an RF part (e.g. eICIC)? There are important WI that need to be finalized and that do not have a RF corresponding part.

Huawei: on the discussion about core and performance requirements, it depends on the meeting arrangement. If we have parallel sessions there is no point taking the performance out from the agenda.

Nokia: slide 1: what is the motivation of keeping MIMO-OTA wrt to the earlier discussion stating to only accept the essential corrections and rel-10? it takes a lot of the meeting time. This create a grey area that opens door for more requests.

Telecom Italia: Take the decision here and not send this to RAN4 reflector.

Motorola (RAN4 vice chair): do we need to send this to RAN4 for comment? the danger is that companies will be coming with proposals and request these to be added to the agenda.

RAN4 chair: - MIMO OTA will have an additional ad-hoc physical meeting and will only have a small portion of the main meeting time.
- If there are Concerns to review this in the RAN4 reflector, then we can use the RAN reflector.

Deutsche Telekom: the working procedure in 3GPP is that the chair sets the agenda. RAN guides him on the priority but it is the chairman's responsibility, with the support of the leadership team, to set the agenda.

RAN chair: this should be considered as a guideline not an agenda for RAN4.

Status: revised in 389

RP-110389	Disc	Prioritization of RAN4 work	RAN4 chairman (Fujitsu)
-----------	------	-----------------------------	-------------------------

LG: why is B5/B8 co-existence for Korea is listed as TEI ?

RAN4 chair: The SI was not approved when this document was prepared. → Few more changes to be expected in the final agenda that will be based on the outcome of this RAN meeting.

ALU: on slide 2: would like to clarify if this is the list of core items to be treated next meeting?
Hhave in mind the eICIC WI for example which is not listed as part of the Core work.

Ericsson: why is performance part considered in the bullet for ITU submissions? Only core part should be considered for that.

Motorola: this is Right, only core part is of interests for ITU-R. However what is listed here is the core part for ITU-R and performance part that are done in parallel. The following slide presents the details.

Ericsson: concern about the performance part: in Slide 2 we need to make it clear that for MIMO UL only the core part is considered.

RAN4 chair: we should concentrate on the core part. but we will also carry some work on the performance part.

Huawei: - It is ok to put priority on core part. However as we are having parallel sessions, there is no reason to remove the performance parts from the agenda.
- slide 6: clarification on the email thread.

RAN4 chair: no decision making on the email thread. Only to progress the discussion.

Agreement:

➔ **This guidance to RAN4 is endorsed.**

➔ **Agenda for the coming meeting to be derived based on this guidance.**

Status: endorsed

RP-110391	Approval (way forward)	RAN4 bands and band combinations overload	Qualcomm
-----------	------------------------	---	----------

TeliaSonera: we should clearly state that these are not decisions or conclusions but rather only examples or this can be miss-interpreted.

Qualcomm: agrees with that and it is stated at the beginning of the slide that these are examples.

Huawei: is not ready to agree or endorse this document. it can be considered a baseline for further discussion but this can not be endorsed as it states that we will set a Priority but it is hard to agree on a criteria for this prioritization.

Telecom Italia: is this prioritization will be done in RAN4 or in RAN ?

RAN chair: RAN plenary (RAN 52).

US cellular: following on the comment from TeliaSonera on the examples, proposes to move the second and third bullet to sub-bullets.

Orange: this document is paving the way but still not a complete guideline. As it is partial and does not give the prioritization criteria can be misleading in RAN4. ➔ No endorsement, only minute this in the RAN report and continue the discussion until next plenary.

CMCC: agrees with orange to capture all the text in the way forward. We can capture the “headline”—the three top level bullets in the RAN meeting minutes and endorse them at RAN level.

RAN4: 1st and 3rd upper bullets are interesting for RAN4.

Endorsed way forward:

- **RAN4 to work on a framework for RAN #52.**
- **RAN #52 will do prioritization among band combinations**
- **RAN4 capacity assessment**

RP-110206	Disc	Backward compatibility issues with MTC	NTT DOCOMO, INC.
---------------------------	------	--	------------------

Vodafone: Charging was not included in the scope of the original WI. If we would like to consider charging optimization this would be a new WI.

Huawei: Backward compatibility issue from CN should be separated from backward compatibility from a RAN point of view. The CT1 solution should be completely transparent to RAN.

- some statements/analysis in this document are misleading (e.g. paragraph on alternative 1)

Ericsson: -supports Vodafone and Huawei.
 - backward compatibility was also discussed in RAN2 and that this should not introduce any inter-operability issue to LTE. Is the analysis for UMTS only or is it for UMTS and LTE ? and if it is also for LTE what would then this proposal from RAN2 become ?

NTT Docomo: For the UMTS solution, we have two technically endorsed CRs. One of them is backward compatible and the other one is not. For LTE, the endorsed CRs are both not backward compatible. One of them introduces a Spare and no indication on how to handle it in one way or the other. The CR from Vodafone that introduces restriction on how to handle spare requires some modification in the network.

Status: noted

---------------------------	----	---	------

Only R2-111703 is approved
 All others are rejected

Status: Partially approved (Only R2-111703 is approved All others are rejected)

RP-110286	CR	Technically endorsed RAN2 CRs related to Network Improvements for Machine-Type Communications for UTRA	RAN2
---------------------------	----	--	------

R2-111630 is approved.
 The other one is rejected

Vodafone: would like to have minuted in the report that vendors (including Ericsson, NSN, ALU, Huawei, Samsung, ZTE) have indicated that they have no problem with this CR, so that we should not see any re-discussion on this.

Samsung, ALU: the minutes should only capture what was said in the meeting and no such comment was made in the meeting.

Vodafone: requested then to capture their request above to capture their comment in the minutes.

Status: partially approved

11.3.6.1 Voting about Rel-10 MTC approaches

No voting is taking place.

11.3.7 Extending 850 MHz Upper Band (814 – 849 MHz)

11.3.7.1 Core part [e850_UB-Core]

RP-110064	Report	Status report for WI Core part: Extending 850 MHz Upper Band (814 – 849 MHz): Sprint	RAN4
---------------------------	--------	--	------

Completion level: 90%

Completion date: June 2011

Qualcomm: On the document it is stated that “*the sole open issue is the requirement that E850_UB meet band 5 reference sensitivity requirement*”. There are few more open issues.

Sprint: For 25.101, a CR was addressed in the last meeting. The UTRA BS issues was resolved. The remaining issues are around UTRA UE requirements.

Status: Noted (Extension and completion date approved)

Discussion on the CRs RP-110188 and RP-110189

RAN2 chair: We need to extend the signalling for band 26 and also other bands in UMTS. Only includes the reference to band 26. we can approve as a one step along with 0189.

Motorola (RAN4 vice chair): postpone to next meeting. there is discussion on UE-UE co-existence that would like to address (not specific to this band but applies also to many of the other bands as well).

Qualcomm: CR in 0189 is introducing the framework for extending bands in RRC spec. this was lengthily discussed (over 2 meetings) in RAN2 and came to a common understanding among companies and preference is to not re-discuss this in RAN2. This is not introducing a band. This is a signalling aspect.

→ proposal is to approve the CR now.

Motorola: we should separate the two CRs. One is introducing the mechanism in 0189 and one is specific to band 26.

Fujitsu: (general comment) in the Status report there is mention about RAN4 work but nothing about this RAN2 CR. → requests that more information is provided in the future.

RAN2 chair: 0189 was seen in the reflector and it should be agreeable.

RP-110133	Exception RS	Rel-10 Work Item Exception for E850 Upper band – Core	Sprint

11.4 Open LTE related Wis

11.4.1 Fixed Wireless Customer-Premises Equipment (CPE) RF Requirements

11.4.1.1 Core part [FW CPE RF-Core]

RP-110066	Report	Status report for WI Core part: Fixed Wireless Customer-Premises Equipment (CPE) RF Requirements: Verizon Wireless	RAN4
---------------------------	--------	--	------

Completion level: 55%

Completion date: June 2011 (March 2011 in the document)

Decision to be taking in the next meeting

Status: Noted (Put on hold (no activities on the WI in RAN4 and RAN5))

RP-110250	Disc	Way forward with Fixed Wireless Customer-Premises Equipment (CPE) RF Requirements	Verizon
---------------------------	------	---	---------

Deutsche Telekom : there is no indication if this will be restarted in Rel-11 or not.

Verizon: main reason to stop this WI is work load in RAN4 and also other proponents were asked and there was no strong recommendation to continue the work. On the question if it will be continued in rel-11, this depends on the interest and if there is interest we can always open a Work Item.

NII holding: is interested in having CPE included in rel-11

UK broadband: also would like this WI to be included in rel-11

RAN chair: - postpone decision on this WI to the next plenary and:
- would like to see the new proposal for rel-11. If a it is new scope of the WI, then this WI will be stopped and a new WI will be approved.
- No activities in this WI until June.

RAN3 chair: agrees that we need to stop this WI and if people want to continue the work then they can bring a new WI proposal to the plenary next meeting, other ways we create a precedent where the proponent of a WI wants to stop the work and someone else jumps in and continues on . If the main proponent of WI wants to stop the WI than we should stop it.

RAN: we already did some work and a TR is created, if the new scope is the same then existing TR can be used.

Motorola: CPE is band specific, it is not clear how do we handle this. Will it include all bands or will we have a CPE WI per band?

Deutsche Telekom: TR contain CPE for band 13, we need to remove this if we go for CPE WI for all bands.

Motorola: there is no reason to remove, it is only captured in the TR and this is fine, this does not exist in the specification.

AT&T: what is the reason why Verizon would like to stop this WI?

Verizon: main reason is Work load in RAN4 and deployment scenarios not clear at this moment.
When deployment become clear and work load will become low, WI can be continued.

RAN: put on hold this work item. And depending on the new WI this WI will be stopped or continued in Rel-11.

-----------	--------	--	------

Completion level: 95%

Completion date: June 2011

Extension to June is requested

Discussion:

RAN4 chair: Understanding is that 4Tx will be postponed to rel-11 and other aspects should be concluded by June. In which case the WID should be updated. Is that the correct understanding?

Huawei: Our understanding is that RAN4 can complete the 2 Tx antenna by June. However, the 4Antenna may be delayed to rel-11

RAN4 chair: there is no work remaining in RAN4 for core part.

RAN chair: Impact of moving 4Tx to rel-11 ?

Huawei: 4Tx is not required for ITU-R submission, we can satisfy the requirements with 2TX at the UE. If we are not sure what to do now, We can continue on this until June and decide then in the next meeting.

Nokia: Situation is similar to CA. Issues that can not be handled in rel-10 will be moved to rel-11.
Not sure there is no core requirement for UE.

Ericsson: there is a need to update the rapporteur in the WID if we continue the work on this.

Huawei, MCC: according to MCC, there is no need for a WID update. The SR will capture the new rapporteur. Tdoc numbers were already asked for the update.

Revised in 394

RP-110394	Report	Status report for WI Core part: UL multiple antenna transmission for LTE: Huawei	RAN1

-----------	--------------	---	---

Motorola: We are still working on intra-band CA and even for this it is not sure we will be able to conclude by June. Question is how to structure the work in ran4 ?

Nokia: do as much as possible and all RAN4 remaining issues will be pushed to Rel-11. Any way we need to establish a WI for the remaining issues for rel-11.

Motorola: all issue not completed by June will be added to the new WI?

Nokia: yes.

➔ Groups leader to decide on how to progress the work in RAN4. Based on the outcome Exception sheet should be revised.

RAN4-chair: RP-110302 is a good way forward. All fundamental aspect should be concluded by June and if necessary we will continue to maintain the rel-10 by mean of CRs.

RAN chair: we should stick to the completion date of all core rel-10 by June.

11.4.8 Adding L-Band LTE for ATC of MSS in North America

RP-110117	Report	LightSquared Status Report on Overload Characteristics of GPS Receivers in Proximity to Band 24 eNB.	LightSquared
---------------------------	--------	--	--------------

Ericsson: is fine to close the WI. However as there is still ongoing work on this GPS issue, the preference is that a SR is provided in June and September. This is because the deadline for FCC is some where in June after the next plenary and as this may have an impact on the RAN4 work, RAN4 should be kept aware of these decisions.

LightSquared: No problem to do provide a SR. However, all these resources are public and anyone can access them on the FCC website.

RAN chair: SR to be provided also next plenary.

Status: noted (WI Closed)

RP-110312	LS in	Liaison letter from "The United States Global Positioning System (GPS) Industry Council (USGPSIC)" (4th of March 2011)	United States GPS Industry Council
---------------------------	-------	--	------------------------------------

RAN4 chair: LSs in RP-110008 and RP-110009 were already treated in RAN4.

RAN: procedure in 3GPP is that we will decide based on the comments from the 3GPP members. If no objection from a 3GPP member than these CRs will be approved and implemented in the spec. However offline discussion is encouraged. we still can come back if there is any conclusion in the 3GPP WGs.

Status: noted

11.4.8.1 Core part [L_Band_LTE_ATC_MSS-Core]

RP-110118	CR	Overload Characteristics of GPS Receivers in Proximity to LTE L-band Terrestrial Base Stations (BTS)	LightSquared
---------------------------	----	--	--------------

RAN4: CR for the TR. Was not discussed due to lack of time. If no technical concern than the CR can be approved

Status: approved

RP-110311	CR	Requirement for Band 24 UE emission, co-exsiting with RNSS/GPS	LightSquared
---------------------------	----	--	--------------

RAN4 chair: CR for the TS. This CR is a revision which was provided slightly late and thus due to lack of time it was not taken. Same handling: if not technical concern, then the CR can be approved.

- The work in RAN4 is completed.

Ericsson: No objection to approve the CR and close the WI. But would like to mention that there are some aspects which RAN4 still need to clarify. e.g. measurement period.

→ proposal is to keep the WI in the agenda of RAN4 for the coming meeting in order to resolve these details.

Nokia: would like the numbers to be between [], to allow RAN4 expert to make clarification.

This is for GPS. There is also Galileo satellites in proximity of this band and we need to check also for these.

LightSquared: - If the objective is to change these values, we should keep in mind that these requirements are coming from FCC.

- If it is on the way to convert FCC requirements to 3GPP spec then it is ok to revise the CR

- Ok to put []

RAN : we need to follow the FCC requirements.

Verizon: agrees with Nokia. Verizon also has some concerns on the CR:

- Is this conversion from FCC requirements is a valid conversion?
- also as E/// mentioned there are some open issues and some details that need to be fixed.
- Also this was brought to RAN4 in the last day of the meeting and only a few time in the reflector, so RAN4 didn't have time to investigate this.

LightSquared: - it is true that a revised version of the CR arrived in the last day but not the CR itself.
- request is to approve the CR with [].

Verizon: the current format is not the exact FCC format. The co-existence issue need to be addressed any way. Also the approval of this CR is independent from the WI closure or not. So sees no reason to rush the approval of this CR.

Status: postponed

RP-110360	CR	CRs for Adding L-Band LTE for ATC of MSS in North America, Core part	RAN4
---------------------------	----	--	------

Status: approved

Discussion on the Way forward:

Motorola: Close the WI but request LightSquared to bring SR for the next plenary.

Qualcomm: if the CR is postponed and SR is to be brought to RAN next plenary. Why do we close the WI ?

LightSquared : this CR is not related to the WI. The WI is 100% complete.
- Ok to bring a SR to next plenary. Also FCC requirements are public and available in their website.

RAN chair: it is clear that we don't need to do any thing from a 3gpp point of view. We need only to get the outcome from FCC. Proposal is to keep the WI open (as a space-holder in the agenda) but no work is required.

Sharp: this proposal makes sense. Understanding is there is a CR still open. If WI is closed then how to do the required work.

NSN: this is not a first case where we close a WI and if there are correction then we do them. It is strange to keep a WI open if it is not clear if there is any thing to be done. If there is any thing to be changed then the CR will be handled in the WG and specification changed.

Agreement:

➔ **Work Item on L_bands is closed and LightSquared is required to provide a SR to the plenary.**

---------------------------	------------	---	--------

Status: revised in 402

RP-110402	WID update	WID update: Service continuity, counting improvements and location information for MBMS for LTE	Huawei
-----------	------------	---	--------

NSN: - has concerns with this reformulation. The scope is widely extended. This has large implications on the complexity and the amount of the work to be done on eMBMS.

➔ If extending then it should be as a new WI.

- What MME functionality would refer to ?

Huawei: What is new is only Counting of Idle UEs and Service continuity in idle.

Huawei: on MME: it is just a continuity of the work that started in ran3. preliminary work was done but it was not possible to conclude in rel-10 scope.

Alcatel Lucent: has concerns on the last-minute added changes on MME.

RAN3 chair: Specify for each bullet if discussion should be led by RAN2 or RAN3.

After offline discussion:

NSN: Come back to counting in the next meeting.

Leave time to companies to understand the counting introduced.

Huawei: two alternative:

- approve and minute that RAN2 should not work on the counting
- update the WID to delete the counting part

Ericsson: update the WID to contain the service continuity part.

ALU: Initial proposal from Huawei is sufficient to remove any confusion or miss-understanding.

Orange: keep the counting either in one way or the other.

LG: prefers option 2: update the WID delete the counting and discuss it in the next plenary.

NEC: what will we do after June plenary?

Huawei: More justification why counting is necessary and which explains that there is no complexity on implementing this.

Tentative hands-up: 6 for keeping WID and not work on counting vs. 3 for removal of counting from WID.

RAN2 chair: preference is to have a WID that reflects what need to be worked on.

RAN3 chair: give indication which group to work on which aspect.

➔ **RAN3 does not start the work and waits for RAN2.**

SI in on Hold

Completion level: 40%

Completion date: June 2011(March 2011 in the document)

Status: Noted (completion date extension approved)

Way forward discussion:

Nokia: there is a need to clarify the objectives of the scope of the SI before we can re-open it (there are other areas than the RAN overload that needs to be discussed)

Ericsson: supports the view from Nokia.

RAN chair: proposes to check the decision from SA next week, then decide.
Proposal is to postpone the decision to next meeting

Huawei: RAN2 should not do any thing until next plenary ?

RAN chair: yes.

LG: thinks it is beneficial to discuss the scope of the SI in RAN2 until to the next plenary.

RAN3 chair: the understanding is that we work on RAN overload and for any thing else we need to wait for the decision from SA. is this the correct understanding ?

Huawei: there is a need and it was agreed to focus the study. To do so, we need either to:
- carry on the current study for the next months on the RAN overload and revisit in June.
- or decouple this from the study.

RAN chair: Study on the overload should continue in RAN2 under this SI ?

Vodafone: before we can do so we should make sure we can complete the work on the CN overload.

IP wireless: CN overload was conducted as a WI. What about the RAN overload. Should it also be conducted under a WI ?

RAN chair Until June we will study the RAN overload in the SI. if needed we will create a WI for the RAN overload.

RAN chair: - Study on the overload should continue in RAN2 under this SI but only RAN overload (not re-opening the whole SI)

- a way forward to be decided in June.

RAN2 chair: : we need a document saying that so that is clear for RAN2..

Huawei: we can provide an update of the SI to do so.

Ericsson : no point on revising the SI, leave it as it is. and give a guidance to RAN2.

Agreed Way Forward:

====> **continue the Study Item but limited to RAN overload only.**

====> **separate study can be done for UMTS and LTE**

====> **No change of the SI description at this point in time**

RP-110218	Disc	Way forward on M2M work in Rel-11	Huawei
---------------------------	------	-----------------------------------	--------

Status: Noted

RP-110249	Disc	MTC device migration from GSM	Vodafone
---------------------------	------	-------------------------------	----------

Orange: is what is requested here is a new physical layer to support new MTC devices ?

Vodafone: objective is to migrate the devices from GSM as much as possible and eventually switch off GSM. → We should consider how to get to this objective.

The idea is not to change layer 1 as this will have a big impact on LTE. But Optimizations to be considered. RAN 52 to consider what are the possibilities.

LG: do you consider improvements in LTE only or also UMTS ?

Vodafone: by the time the migration will be done., we see LTE as the system that will be evolving. → Migration to LTE in one step.

Nokia: we need to start proactively and prepare the work. A lot of complexity is foreseen for LTE if we want to add MTC.

Status: revised in 0419

13.11 Closed study items

14 New Work Items/Study Items

RP-110392	Disc	RAN 1 chairman's guidance on approval of WIs/SIs to be led by RAN1	RAN1 chairman (Alcatel-Lucent)
-----------	------	--	--------------------------------

Discussion on relays:

Sharp: clarification on "*Treat relay aspects separately at RAN#52*" requested.

LGE: Generally fine with RAN1 chairman suggestion but suggest to remove relay aspects from WIs/SIs when we approve the WIs/SIs for CA, DL and UL MIMO for the time being and revisit in June plenary after we have a clearer picture for the relay work item for release 11.

RAN1 Chair: there is no need to remove these aspects from the approved WIs/SIs at this meeting.

Vodafone: we need to have a concrete framework on rel-11 in a very generic manner.

Huawei: Welcomes the guidance. When it comes to assessing the different proposals on the wireless back haul, removing these items from the current WI/SI proposals would make them unstable at this stage. It is preferred to not change them now and we can still update them in June if required.

Ericsson: same view as RAN1 chair and Huawei.

RAN1 chair: it is ok to approve now WIs/SIs that contain relay aspects, but we do so with the understanding that the best way to proceed with relay work will be revisited at RAN52..

[???]: what about proposals on relay with other leading groups than RAN1?

RAN chair: one by one when discussing them

Way forward: approve WI/SI that include relay work with the understanding that next plenary we may revisit the WID/SID.

Discussion on MIMO:

Renesas, Vodafone, ???: give lower priority to MIMO.

Vodafone: we need to try to be responsible and try to understand the important aspects and try to do them quickly. Other aspects aiming optimization where it is not clear what the gain is need to be treated with lower priority.

Samsung: good proposal from RAN1 chair. Fully supports

RAN1 chair: for RAN1, it is clear what the priorities are.

Status: revised in 396 (as SI see agenda 14.2)

Discussion on the Way forward on new bands and band combinations WIs:

Ericsson: we should have the same handling for all WI proposals on band combinations.

Motorola: same view

RAN: from a Fairness point of view, we should have the same treatment for all band combinations.

Qualcomm: what is the difference between approving them all or postponing them all as any way ran4 will not work on them until after June?

AT&T: the difference is the message to send to the operators.

Ericsson: preference is to postpone them all

Qualcomm: proposal is to approve them and then need to be resubmitted in the next plenary in order to to adjust the time line.

RAN4 chair: supports the proposal. And he confirmed that anyway no work will be done on the approved WIs before Juane.

NII holding: is this valid for both band combinations and new bands ?

RAN4 chair: New band combinations only. New bands are to be discussed one by one.

Orange: Work load Takes into account new bands and band combinations. What is the rational behind different treatments and having new bands combinations approved and revised in next meeting and not the same handling for new bands ?

RAN4 chair: new bands will not be approved automatically but rather discussed one by one. Then they can either be put on hold or handled on RAN4.

Ericsson: supports the point of view from RAN4 chairman.

➔ **WIs will be approved and completion dates to be revisited in the next meeting.**

All WIs on new bands and band combinations are on hold until RAN#52

-----------	-----	--	-----------------------

NEC: has concern on this WI as the Japanese government haven't taken any decision yet.

NTT: also has a concern on starting this with a WI. It should start as a SI because the original objective is to create only one globally harmonised operating band. On some countries co-existence studies are under study. If a new band is created an requirements are finalised, we need to create another new band.

Sharp: comprehensive band is very attractive. But There is some issues as for AARIB for example.
Start this as SI and incorporated some of these requirements.

KDDI: support NTT and sharp → start the work as SI.

Ericsson: we need to keep in mind that this is referencing the work that was done and if we restart the work.
There are co-existence problem that need to be sorted soon and can not wait for two quarters

Fujitsu: have the occasion to review the proposal or start as SI.

RAN4 chair: it is proposed to conclude in December, with this respect we should pay attention to the time plan in Australia.

Ericsson: - it could be extended to June.
- instead of having this as SI, postpone to next meeting to have time to discuss offline.

Motorola: in WIs for new bands we always start with a TR. Not much difference between SI and WI.

Status: postponed

14.2 New Study Items

RP-110124	SID	SID proposal: Interference analysis between 800~900 MHz bands	LG Uplus, LG Electronics , Samsung, KT, SKT,KTL
---------------------------	-----	---	---

Status: revised in 0412

RP-110412	SID	SID proposal: Interference analysis between 800~900 MHz bands	LG Uplus, LG Electronics , Samsung, KT, SKT,KTL
-----------	-----	---	---

NTT: is this can handle not only korea region but also other region and not only LTE but also UMTS?

LG plus: In Korea case it is only LTE.

Sharp: we should expend to include other countries.

Orange: same opinion.

LG plus: Approve in this meeting and in June include other countries.

NSN: We should be careful what cases we are including. We should focus on the case where we identify some issues. If We include other cases We should have commitment from companies to do the work on the added cases.

Sharp: agrees that we should not have a general study but there are specific situation existing right now that need to be added.

RAN4 chair: if Korean companies have plans then we have to pay attention to these plans as 3GPP.
- other point is RAN4 needs to concentrate on rel-10 issues. → put on hold until June.

NTT Docomo: is fine to approve this SI. Companies does not have time to implement this.

LG plus: we can revise and change the completion date to September.

Korean companies: Is it possible to submit contribution and have some time for discussion on the RAN4 May meeting?

RAN4 chair: we can use the email thread as proposed in the Guidance on the management of work load.

Qualcomm: confused as thought this point was already in the agenda for April.

Sprint: supports the start of the SI starting from now.

- SI approved.
- Discussion only on email until June.
- Discussion on the main meeting after June.
- Possible extension to other countries in the next plenary.

Revised to change the completion date to September 2011

Status: revised in 447

RP-110447	SID	SID proposal: Interference analysis between 800~900 MHz bands	LG Uplus, LG Electronics , Samsung, KT, SKT,KTL
-----------	-----	---	---

- Discussion only on email until June.
- Discussion on the main meeting after June.

- Possible extension to other countries in the next plenary. (To be discussed during the next meeting)

Status: approved

RP-110130	Info	New study item proposal for LTE and HSDPA Carrier Aggregation	Nokia Siemens Networks, Nokia Corporation
---------------------------	------	---	---

Ericsson: Is there a study in SA wrt to security ?

NSN: No impact outside RAN.

NTT Docomo: Have concerns approving this proposal. This will create a lot of work load for a limited gain.

Status: noted

RP-110384	Discussion	Inter-RAT load balancing / carrier aggregation	Alcatel Lucent
-----------	------------	--	----------------

Status: noted

RP-110180	SID	New study item proposal: Further Enhancements to LTE TDD for DL-UL Interference Management and Traffic Adaptation	CATT, Ericsson, ST-Ericsson
---------------------------	-----	---	-----------------------------

Status: revised in 0397

RP-110397	SID	New study item proposal: Further Enhancements to LTE TDD for DL-UL Interference Management and Traffic Adaptation	CATT, Ericsson, ST-Ericsson
-----------	-----	---	-----------------------------

Status: Revised in 440

RP-110440	SID	New study item proposal: Further Enhancements to LTE TDD for DL-UL Interference Management and Traffic Adaptation	CATT, Ericsson, ST-Ericsson
-----------	-----	---	-----------------------------

RAN1 chair: if approved we should put on hold until October as suggested in the guidance to RAN1. Some discussion of simulation assumptions may take place before October, either in the Aug meeting or by email.

RAN4 chair: if this is the case we need to review the expected completion date for RAN4.

→ approved with change of completion date to RAN#55 (presented to RAN54 for information)

→ RAN1 work on hold until October.

Status: Revised in 450

RP-110450	SID	New study item proposal: Further Enhancements to LTE TDD for DL-UL Interference Management and Traffic Adaptation	CATT, Ericsson, ST-Ericsson

Status: Approved

RP-110181	SID	New Study Item Proposal: Mobile Relay for EUTRA	CATT, CMCC, CATR
---------------------------	-----	---	------------------

Status: revised in 0398

RP-110398	SID	New Study Item Proposal: Mobile Relay for EUTRA	CATT, CMCC, CATR
-----------	-----	---	------------------

AT&T: there should be also some impact on RAN4 as there are interferences.

Renesas: What are the Layer 1 improvements that does not require any change to the UE ?

CATT: what have in mind is possible improvements for High speed UEs.

Huawei: Do the intended L1 changes only concern the backhaul or is there impact on the link to the UE as well ?

CATT: Mostly backhaul on mind. In the meantime the solutions can be applicable to high speed UEs and do not see why we should preclude this.

Nokia: Is the intention is also to provide some information on the deployment scenarios?

Motorola: supports the comment from Nokia.

RAN2 chair: understanding is that we don't need to discuss this here and all relay discussion will be handled next RAN meeting.

CATT: It could be good to have some time to study the improvements. The scope of the SI is the higher layers not the physical layer. The understanding from Matthew's presentation is that only discussion for RAN1 is deferred to the next meeting.

Status: postponed

RP-110208	SID	Study on HSPA Enhancement for LCR TDD	TD Tech
---------------------------	-----	---------------------------------------	---------

Status: revised in 0315

RP-110315	SID	Study on HSPA Enhancement for LCR TDD	TD Tech
---------------------------	-----	---------------------------------------	---------

Qualcomm: this is RAN1 leading. We should follow the guidance for RAN1.

RAN1 chair: relatively new, allow time for companies to look at it. → postpone to next meeting.

TD tech: what are the reason for postponing the SI ?

RAN1 chair: RAN1 is loaded with HSPA subjects and also several details are still to be clarified and discussed more.

Status: postponed

RP-110214	SID	New SI proposal: Further enhancements to CELL_FACH	Qualcomm Incorporated

15 Technical co-ordination among WGs

16 Outputs to other groups

RP-110421	LS out	Response to USGPSIC letter	LightSquared
-----------	--------	----------------------------	--------------

AT&T: some editorial changes are needed.

Motorola: how do we get the status report submitted from USGPSIC to FCC?

LightSquared: Status report from LightSquared to RAN will include that.

Status: revised in 425 (to sort the editorial issues)

RP-110425	LS out	Response to USGPSIC letter	LightSquared
-----------	--------	----------------------------	--------------

Status: revised in

RP-110429	LS out	Response to USGPSIC letter	LightSquared
-----------	--------	----------------------------	--------------

Status: Approved

RP-110445	Draft LS on rel-10 UE capabilities (To RAN1, 2, 3, 4, 5)	NTT DOCOMO, INC.	LS out
-----------	--	------------------	--------

Huawei: It seemed that we had an agreement this morning that eICIC would be optional and MDT RLF mandatory with FGI. Can you clarify?

NTT: Some operators had a strong objection to this.

Ericsson: we reached an agreement after a long discussion over two days and then this was changed now. Would like to highlight Ericsson's disappointment about this.

Huawei: same view as Ericsson. Huawei followed the discussion until this morning, and this morning it seemed that there was an agreement reached.

TeliaSonera: also supports Huawei and Ericsson. eICIC was approved to be optional.

Nokia: also understanding is that there was an agreement this morning.

NTT Docomo: if no consensus then it is fine to change this to optional.

Orange: Until the end of the discussion Orange and CMCC were raising that this not acceptable to have this optional.

CMCC: supports the comment from orange.

RAN4 chair: leave the two contentious options open and move with the other ones.

➔ leave the two contentious options open and move with the other ones.

=> RAN2 will prepare a separate technically endorsed CR for RAN#52 for eICIC capability bit, and make sure there is enough room for FGI bits for including also RLF FGI bit. RAN#52 will decide on the way forward for both issues.

Ericsson and Huawei expressed their disappointment about the fact that the agreement from the offline session in the morning seems not to hold anymore.

Status: Revised in 458

RP-110458	LS out	Draft LS on rel-10 UE capabilities (To RAN1, 2, 3, 4, 5)	NTT DOCOMO, INC.

18 Future meeting schedule

General Comment:

Fujitsu (RAN4 chair) as part of the 3JP informed the delegates that they are Monitoring the situation in Japan regarding the meeting in May and they will keep the companies informed of the situation. So far there is no issue with venue or access to the venue.

19 Any other business

RP-110261	Disc	On Network Sharing	TeliaSonera, Telefonica, Orange
---------------------------	------	--------------------	---------------------------------

Status: revised in 366

RP-110366	Disc	On Network Sharing	TeliaSonera, Telefonica, Orange
-----------	------	--------------------	---------------------------------

Qualcomm: this is linked to the proposal in the WI from ALU on the enhancement of HNB and NB where one of the key features is the support of RAN sharing for Home NBs/eNBs.

Deutsche Telekom: what is exactly the request in this document ? is it, if we specify some thing we need to do it for all RATs: GSM, UMTS and LTE ?

- The case of network sharing among multi-vendors ?

TeliaSonera: Not for all Radio access technology.

- Didn't consider multi-vendors case.

NSN: has concern about the statement from Qualcomm on keeping this sharing network within one small WI. Work needs to be started at SA level with RAN as a big part of the work task.

Samsung: is the intention is to have this starting from rel-11.

TeliaSonera: Yes this is correct, starting from rel-11.

Qualcomm: (to the concern from NSN)we can take network sharing out of the proposal from ALU and this will be discussed next week in SA. If SA decides to create a WI for network sharing then RAN will be part of it and HeNB will be one item of this WI.

TeliaSonera: Preference is to not take out network sharing from any existing WI or proposal. Would like to have this be supported for all features.

TELEFONICA: it is important to first understand why network sharing is not supported for individual features.

Huawei: on the generic support of network sharing, do we need to have such an agreement ? for example for mobile relay; do we need to have network sharing for mobile relay?

SA chair: in general a feature should be supported when we have network sharing and in case it is not feasible or requires too much work then we need the decision consciously and have the reasons documented. We should not take decision on specific issues.

Qualcomm: the proposal is specific. It is for the support of network sharing for: HeNBs, CBS and EAB.
there are two ways of doing it:

- take network sharing out from RAN WIs and an umbrella WI can be proposed for these specific features
- or have network sharing in individual WIs.

TeliaSonera: having a generic WI is too complicated. Preference is to have them in separate WIs. The aim of this proposal is not to resolve what went wrong in rel-8 or rel-9 but rather to move forward from rel-11 and see if it is not possible then this and why it is not possible need to be documented.

RAN chair: network sharing to be kept in the WI proposal from Alcatel Lucent and Next meeting we consider the SA decision.

Status: Noted

20 Closing of the meeting (No later than Friday 1 p.m.)

Meeting was closed by the RAN chairman on Friday at 13h00.

Annex B:

List of Tdocs

status	Agenda item	Tdoc	Title	Source	Type
approved	02.	RP-110001	Agenda for RAN #51	RAN chairman (NTT DOCOMO)	Agenda
noted	08.2.1	RP-110002	RT-110032, "LTE-Advanced" material for Rec. ITU-R M.[IMT.RSPEC] H146	TSG-RAN ITU-R AdHoc	Approval
noted	08.2.1	RP-110003	RT-110018, "Supporting input for the OPs"	TSG-RAN ITU-R AdHoc	Approval
noted	08.2.1	RP-110004	Milestone 4 of RP-100939 fulfilled	MCC	Info
noted	08.2	RP-110005	LS on the consideration of Relay Nodes in the LTE-Advanced material for Rec. ITU-R M.[IMT.RSPEC] to be submitted to ITU-R WP5D#10 (6-13 April, 2011)	RAN ITU-R Ad Hoc	LS in
noted	08.2	RP-110006	LS on additional considerations of Relay Nodes in the LTE-Advanced material for Rec. ITU-R M.[IMT.RSPEC] to be submitted to ITU-R WP5D#10 (6-13 April, 2011)	RAN ITU-R Ad Hoc	LS in
noted	06.1	RP-110007	LS on E-UTRA BS emission limits in European Harmonised Standards	ETSI MSG	LS in
noted	11.4.08	RP-110008	LS from The United States Global Positioning System (GPS) Industry Council	United States GPS Industry Council	LS in
noted	11.4.08	RP-110009	Liaison letter from GPS Industry Council (Final Letter)	United States GPS Industry Council	LS in
noted	06.2	RP-110010	Way forward on DVB-NHG and eMBMS convergence	3GPP TSG SA	LS in
noted	11.4.05	RP-110011	LS on exception to SA WG3 to continue working on Relay Node	3GPP TSG SA	LS in
noted	11.4.05	RP-110012	LS on Security for LTE relay nodes	TSG SA WG3	LS in
noted	11.4.03	RP-110013	LS on phase continuity for UL MIMO	TSG RAN WG1	LS in
noted	06.3	RP-110014	Reply LS on CN node selection	TSG RAN WG2	LS in
noted	11.3.6	RP-110015	Reply to C1-110757 on Provision of the RRC establishment cause "Delay tolerant"	TSG RAN WG2	LS in
noted	11.4.05	RP-110016	Reply LS on Security for LTE relay nodes	TSG RAN WG3	LS in
withdrawn	11.3.1	RP-110017	LS on Status of work on UMTS/LTE 3500 MHz	TSG RAN WG4	LS in
noted	06.3	RP-110018	LS on CRs for MSR specifications	TSG RAN WG4	LS in
noted	11.3.5	RP-110019	LS on Status of the MSR-NC work item	TSG RAN WG4	LS in
noted	08.1	RP-110020	Status Report ITU-R Ad hoc	ITU-R Ad Hoc Contact (Telecom Italia)	Report
noted	09.1.1	RP-110021	Status Report RAN WG1	RAN1 chairman (Alcatel-Lucent)	Report
noted	09.1.1	RP-110022	List of CRs from RAN WG1	RAN1	Info
noted	09.2.1	RP-110023	Status Report RAN WG2	RAN2 chairman (Samsung)	Report
noted	09.2.1	RP-110024	List of CRs from RAN WG2	RAN2	Info
noted	09.3.1	RP-110025	Status Report RAN WG3	RAN3 chairman (Qualcomm)	Report
revised in RP-110307	09.3.1	RP-110026	List of CRs from RAN WG3	RAN3	Info
noted	09.4.1	RP-110027	Status Report RAN WG4	RAN4 chairman (Fujitsu)	Report

revised in RP-110431	09.4.1	RP-110028	List of CRs from RAN WG4	RAN4	Info
noted	09.5.1	RP-110029	Status Report RAN WG5	RAN5 Chairman (NTT DOCOMO)	Report
revised in RP-110362	09.5.1	RP-110030	List of CRs from RAN WG5	RAN5	Info
approved	09.5.1	RP-110031	Status Report MCC TF160 (for Approval)	MCC TF 160 Leader	Report
noted (completion level and date approved)	10.01.1	RP-110032	Status report for WI Conformance test aspects – LTE 3500: Ericsson	RAN5	Report
noted (completion level and date approved)	10.01.2	RP-110033	Status report for WI Conformance test aspects – UMTS 3500: Ericsson	RAN5	Report
noted (completion level and date approved)	10.02	RP-110034	Status report for WI Conformance test part: Fixed Wireless Customer-Premises Equipment (CPE) RF Requirements: Verizon Wireless	RAN5	Report
noted (completion level and date approved)	10.03	RP-110035	Status report for WI Conformance Test Aspects – LTE Positioning: Alcatel-Lucent	RAN5	Report
Noted (extension of completion date is approved)	10.04	RP-110036	Status report for WI AGNSS test case development for UMTS: Thales	RAN5	Report
Noted (Extension date is approved)	10.05	RP-110037	Status report for WI Conformance Test Aspects - CT1 aspects of IMS Emergency Calls over GPRS and EPS: Samsung	RAN5	Report
Noted (Completion date and level approved)	10.06	RP-110038	Status report for WI Conformance Test Aspects –Multiple Band and Multiple Frequency operation for LCR TDD: CATR	RAN5	Report
Noted (Completion date extension approved)	10.07	RP-110039	Status report for WI Conformance Test Aspects – Enhanced Dual-layer transmission for LTE TDD: China Mobile	RAN5	Report
Noted (Completion level and date approved)	10.08	RP-110040	Status report for WI Conformance Test Aspects – Combination of DC-HSDPA with MIMO: Ericsson	RAN5	Report
Noted (Completion level and date approved)	10.09	RP-110041	Status report for WI Conformance Test Aspects – Home NB enhancements for FDD: Huawei	RAN5	Report
Noted (Completion level and date approved)	10.10	RP-110042	Status report for WI Conformance Test Aspects – Home eNB enhancements: Qualcomm	RAN5	Report
revised in RP-110325	10.11	RP-110043	Status report for WI Conformance Test Aspects – MBMS support in LTE: Huawei	RAN5	Report
withdrawn	11.1.5	RP-110044	Status report for WI AGNSS Minimum Performance for UTRAN: Thales	RAN4	Report
Noted (Completion level and date are approved)	11.2.1	RP-110045	Status report for WI UE Over the Air (Antenna) conformance testing methodology- Laptop Mounted Equipment Free Space test: CATR	RAN4	Report
Noted (closure of the WI approved)	11.2.2.1	RP-110046	Status report for WI Core part: Four carrier HSDPA: Qualcomm	RAN1	Report
Noted (Completion level and date are approved)	11.2.2.2	RP-110047	Status report for WI Performance part: Four carrier HSDPA: Qualcomm	RAN4	Report
Noted (closure of the WI approved)	11.2.3.1	RP-110048	Status report for WI Core part: Inclusion of “RF Pattern Matching Technologies” as positioning method in the UTRAN: Polaris Wireless	RAN2	Report
Noted (Completion level and date are approved)	11.2.4.1	RP-110049	Status report for WI Performance part: MU-MIMO for 1.28Mcps TDD: CATT	RAN4	Report

Noted (Extension date to June is accepted)	11.2.5.1	RP-110050	Status report for WI Performance part: Performance Requirements for two-antenna 1.28Mcps TDD Type 1 & 2 UE receiver: TD Tech	RAN4	Report
Noted (Extension date to June is accepted)	11.2.6.1	RP-110051	Status report for WI Core part: Support of New Band Combinations for Dual-Band Dual Cell HSDPA: AT&T	RAN4	Report
Noted (Extension date approved)	11.2.7.1	RP-110052	Status report for WI Core part: MIMO operation with non-MIMO coexistence in HSDPA: Qualcomm	RAN4	Report
Noted (date and level approved)	11.2.7.2	RP-110053	Status report for WI Performance part: MIMO operation with non-MIMO coexistence in HSDPA: Qualcomm	RAN4	Report
revised in RP-110298	11.2.8.1	RP-110054	Status report for WI Core part: Automatic Neighbour Relation (ANR) for UTRAN: ZTE	RAN3	Report
Noted (Extension of completion date approved)	11.2.9.1	RP-110055	Status report for WI Core part: Enhancements of Iur-g interface – RAN part: ZTE	RAN3	Report
Noted(extension of completion date approved)	11.3.1	RP-110056	Status report for WI UMTS: LTE 3500 MHz: Ericsson	RAN4	Report
Noted (Extension of date to June approved)	11.3.2.1	RP-110057	Status report for WI Core Part: Minimization of drive tests for E-UTRAN and UTRAN: Nokia Siemens Networks	RAN2	Report
Noted (WI closed)	11.3.3.1	RP-110058	Status report for WI Core part: HNB and HeNB Mobility Enhancements: Alcatel-Lucent	RAN3	Report
Noted (extension approved to June)	11.3.4.1	RP-110059	Status report for WI Core part: Expanded 1900 MHz Band for UTRA and LTE: Sprint	RAN4	Report
Noted (extension of completion date approved)	11.3.4.2	RP-110060	Status report for WI Performance part: Expanded 1900 MHz Band for UTRA and LTE: Sprint	RAN4	Report
Noted (Extension and completion date approved)	11.3.5.1	RP-110061	Status report for WI Core part: Multi-standard radio BS RF requirements for non-contiguous spectrum deployments: Ericsson	RAN4	Report
Noted (Extension and completion date approved)	11.3.5.2	RP-110062	Status report for WI Performance part: Multi-standard radio BS RF requirements for non-contiguous spectrum deployments: Ericsson	RAN4	Report
Noted (WI closed)	11.3.6	RP-110063	Status report for WI RAN mechanisms to avoid CN overload due to Machine-Type Communications: Huawei	RAN2	Report
Noted (Extension and completion date approved)	11.3.7.1	RP-110064	Status report for WI Core part: Extending 850 MHz Upper Band (814 – 849 MHz): Sprint	RAN4	Report
Noted (Extension and completion date approved)	11.3.7.2	RP-110065	Status report for WI Performance part: Extending 850 MHz Upper Band (814 – 849 MHz): Sprint	RAN4	Report

Noted (Put on hold (no activities in RAN4 and RAN5))	11.4.01.1	RP-110066	Status report for WI Core part: Fixed Wireless Customer-Premises Equipment (CPE) RF Requirements: Verizon Wireless	RAN4	Report
Noted (WI closed)	11.4.02.1	RP-110067	Status report for WI Core part: Enhanced Downlink Multiple Antenna Transmission for LTE: NTT DoCoMo	RAN1	Report
Noted (completion level and date approved)	11.4.02.2	RP-110068	Status report for WI Performance part: Enhanced Downlink Multiple Antenna Transmission for LTE: NTT DoCoMo	RAN4	Report
revised in RP-110375	11.4.03.1	RP-110069	Status report for WI Core part: UL multiple antenna transmission for LTE: Huawei	RAN1	Report
revised in RP-110413	11.4.03.2	RP-110070	Status report for WI Performance part: UL multiple antenna transmission for LTE: Huawei	RAN4	Report
revised in RP-110387	11.4.04.1	RP-110071	Status report for WI Core part: Carrier Aggregation for LTE: Nokia	RAN1	Report
Noted (completion date is extended to September 2011)	11.4.04.2	RP-110072	Status report for WI Performance part: Carrier Aggregation for LTE: Nokia	RAN4	Report
Noted (Completion level and date are approved)	11.4.05.1	RP-110073	Status report for WI Core part: Relays for LTE: Ericsson	RAN1	Report
Noted (completion level and date are approved)	11.4.05.2	RP-110074	Status report for WI Performance part: Relays for LTE: Ericsson	RAN4	Report
Noted (Completion date extension approved)	11.4.06.1	RP-110075	Status report for WI Core part: Enhanced ICIC for non-CA based deployments of heterogeneous networks for LTE: China Mobile	RAN1	Report
Noted (extension date to September approved)	11.4.06.2	RP-110076	Status report for WI Performance: Enhanced ICIC for non-CA based deployments of heterogeneous networks for LTE part: China Mobile	RAN4	Report
revised in RP-110329	11.4.07.1	RP-110077	Status report for WI Core part: Adding 2 GHz band LTE for ATC of MSS in North America: TerreStar, DBSD (formerly ICO)	RAN4	Report
revised in RP-110330	11.4.07.2	RP-110078	Status report for WI Performance part: Adding 2 GHz band LTE for ATC of MSS in North America: TerreStar, DBSD (formerly ICO)	RAN4	Report
Noted(completion date and approved)	11.4.08.2	RP-110079	Status report for WI Performance part: Adding L-Band LTE for ATC of MSS in North America: LightSquared	RAN4	Report
Noted(extension of the completion date approved)	11.4.09.1	RP-110080	Status report for WI Core part: LTE Self Optimizing Networks (SON) enhancements: Nokia Siemens Networks	RAN3	Report
Noted (completion level and date approved)	11.4.10.1	RP-110081	Status report for WI Core part: LTE-Advanced Carrier Aggregation of Band 3 and Band 7: TeliaSonera	RAN4	Report
Noted (completion level and date approved)	11.4.10.2	RP-110082	Status report for WI Performance part: LTE-Advanced Carrier Aggregation of Band 3 and Band 7: TeliaSonera	RAN4	Report
Noted (WI closed)	11.4.11.1	RP-110083	Status report for WI Core part: Further enhancements to MBMS for LTE: Huawei	RAN2	Report
noted (extension date approved)	11.4.12.1	RP-110084	Status report for WI Core part: Service continuity in connected mode and location information for MBMS for LTE: Huawei	RAN2	Report

Noted (date and level approved)	12.1.1.1	RP-110085	Status report for WI Core part: Eight carrier HSDPA: Ericsson	RAN1	Report
Noted (date and level approved)	12.1.1.2	RP-110086	Status report for WI Performance part: Eight carrier HSDPA: Ericsson	RAN4	Report
Noted (approved)	12.1.2.1	RP-110087	Status report for WI Performance Part: UE demodulation performance requirements under multiple-cell scenario for 1.28Mcps TDD: China Mobile	RAN4	Report
Noted (approved)	12.1.3.1	RP-110088	Status report for WI Closed Loop Core Part: Huawei	RAN1	Report
Noted (approved)	12.1.3.2	RP-110089	Status report for WI Closed Loop Performance Part: Huawei	RAN4	Report
Noted (approved)	12.1.3.3	RP-110090	Status report for WI Open Loop Core part: Huawei	RAN1	Report
Noted (approved)	12.1.3.4	RP-110091	Status report for WI Open Loop Performance part: Huawei	RAN4	Report
Noted (completion level and date are approved)	12.3.1.1	RP-110092	Status report for WI Core Part: Network-Based Positioning Support for LTE: TruePosition	RAN2	Report
Noted (date extension to september 2012 is approved)	12.3.1.2	RP-110093	Status report for WI Performance Part: Network-Based Positioning Support for LTE: TruePosition	RAN4	Report
Noted (completion date and level approved)	12.3.2.1	RP-110094	Status report for WI Core part: LTE Advanced Carrier Aggregation of Band 4 and Band 17: AT&T	RAN4	Report
Noted (completion date and level approved)	12.3.2.2	RP-110095	Status report for WI Performance part: LTE Advanced Carrier Aggregation of Band 4 and Band 17: AT&T	RAN4	Report

Annex F:

Summary of RAN work items (WI) and study items (SI)

An overview of recent RAN work items and study items (including the new WIs & SIs approved at this meeting) is attached to this report.

This overview is used as input for the 3GPP workplan which lists all 3GPP work and study items.

Annex G:

Actions decided by RAN #51

- To TSG-SA

- SA is asked to decide if Relay Node is included in Rel-10 on day 1 of SA#51 to keep enough preparation time for LTE-Advanced materials before the deadline of the contribution to ITU-R WP5D#10 meeting
- A CR for 21.905 developed by MCC and endorsed at RAN#51 is provided in SP-110091 to SA for approval
- The updated TR21.905 and the cover page to submit to ITU-R WP5D is provided in SP-110205 to SA for approval
- Response to a LS from WP5A, “LS on Wide area sensor and/or actuator network (WASN) systems,” is provided to SA in SP-110206 for approval
- Response to a LS from WP5A “LS on Quality of service requirements and objectives for wireless access systems” is provided to SA in SP-110207 for approval
- Response to ITU-R WP5A on the Working Document towards a Preliminary Draft New Report ITU-R M.[LMS.PPDR.UHF TECH] is provided to SA in SP-110208 for approval

- To MCC

- TSG-RAN kindly asks MCC to implement the CR for TR 21.905 as soon as the CR approved at SA#51 so that the updated TR 21.905 can be submitted to PCG for approval and then to ITU-R WP5D before the deadline of contributions to WP5D#10 meeting, 30th March
