

**SYLFIRM X**

**Dr. Randy Miller, MD, FACS (a board certified cosmetic and reconstructive plastic surgeon in Miami, Florida, USA)**

The beautiful thing about SYLFIRM X is that it is a radiofrequency microneedling device and has both dual wave; continuous wave and pulsed wave, so it can treat all skin types and different colors. It can go as superficial as 300 microns from the skin surface where pigment problems are, can also go down to 4mm for skin tightening. The SYLFIRM X is a great device and I am very happy to be using it and our patient are even more happy.

**Dr. Seiko KOU, MD (Director of KO clinic, Japan)**

I've been using SYLFIRM X for 2 years. The advantage of SYLFIRM X is that it enables us to improve damaged basement membrane condition of the epidermis. For skin that is originally damaged by photoaging and melasma, SYLFIRM X is a very safe starter to make the skin firm and strong. Moreover, SYLFIRM X is good for combination treatment with lasers. I recommend SYLFIRM X because it can be used for a variety of purposes. Doctors who often use lasers in aesthetic dermatology will surely find it very helpful.
