PRESS RELEASES

ZCorum and MaxLinear Deliver Remote Monitoring and Spectrum Analysis Tools for Broadband Providers

September 04, 2013

- MSOs can use new spectrum analysis application with millions of installed MaxLinear-based cable consumer premise equipment to significantly reduce the need for expensive field test equipment and truck rolls

ZCorum and MaxLinear announced today they are working together on the development of a software solution that will support MaxLinear-based cable systems and will leverage a portion of the DOCSIS standard that allows cable modems to see complete spectrum information from the signal coming into a home. This will allow operators to remotely view and analyze all channels passing through the cable modem, which will improve troubleshooting capabilities for both data and video subscribers. ZCorum and MaxLinear will be demonstrating the new concept to invited guests in a private suite during the International Broadcasting Convention (IBC) Show in Amsterdam, September 13 through 17.

By leveraging both companies' expertise in customer premises equipment and diagnostics and the tens of millions of MaxLinear-base units in the field that already have this capability, the companies expect to create a paradigm shift in how cable operators troubleshoot home and network issues in the field. ZCorum already develops software-based diagnostics solutions for broadband providers, including its popular TruVizion software for cable modem and CMTS diagnostics, plus an accompanying mobile app called TechVizion. MaxLinear provides integrated radio frequency (RF) and mixed-signal integrated circuits that are used in many cable modems and set-top boxes (STB). The company's TV tuners and receivers provide embedded remote spectrum monitoring and deliver performance monitoring and remote diagnostic data for the new application.

"Cable operators today have huge expenditures for test equipment they provide to their field technicians so they can troubleshoot subscriber RF issues," said Scott Helms, Vice President of Technology for ZCorum. "This solution will offer a remote view into the full spectrum of downstream channels via any compatible cable modem or STB. So, there is no need to be at the customer premise or to connect a meter." According to Helms, in addition to a significant decrease in capital expenses for field test equipment, operators should expect to reduce truck rolls and time spent in the field tracking down problems.

"We are pleased to be working together with ZCorum on this development project," said Brian Sprague, MaxLinear's Vice President and General Manager for Broadband and Consumer Products. "This collaboration will provide MSOs that are using our cable receivers with Intel's Puma 5 and Puma 6 SOCs a considerable leap forward in network management capabilities that will generate a substantial impact to the operators' bottom line."

"ZCorum is committed to advancing the evolution of broadband network management for our cable operator partners and we're pleased to be working with MaxLinear and the Intel Puma platform to develop our full spectrum analysis solution," said Julie Compann, Chief Executive Officer at ZCorum.

About ZCorum

ZCorum provides broadband Internet and communication solutions to telcos, cable companies, utilities, and municipalities, assisting in all facets of broadband implementation, integration, engineering and consulting, network monitoring, bandwidth management and diagnostics. ZCorum also offers wholesale, private-labeled Internet services, including data and VoIP provisioning, email, Web hosting, and 24x7 support for end-users, enabling service providers to compete more effectively in their local rural and suburban markets. ZCorum is headquartered in Alpharetta, GA. For more information, please visit <http://www.ZCorum.com/>.

About MaxLinear, Inc.

MaxLinear, Inc. is a leading provider of radio-frequency and mixed-signal semiconductor solutions for broadband communications applications. MaxLinear is located in Carlsbad, California, and its address on the Internet is <https://www.maxlinear.com>.

MaxLinear Inc. Corporate Contact: Patrick Tierney, Senior Director, Cable Product Line, Tel: 760-692-0711 x131, [ptierney\(at\)maxlinear\(dot\)com](mailto:ptierney(at)maxlinear(dot)com).

MxL, Full-Spectrum Capture, FSC and the MaxLinear logo are trademarks of MaxLinear, Inc. Other trademarks appearing herein are the property of their respective owners.

Cautionary Note About Forward-Looking Statements

This press release contains "forward-looking" statements within the meaning of federal securities laws. Forward-looking statements include, among others, statements concerning or implying future financial performance or trends and growth opportunities affecting MaxLinear, in particular statements relating to our collaboration with ZCorum. These forward-looking statements involve known and unknown risks, uncertainties, and other factors that may cause actual results to differ materially from any future results expressed or implied by these forward-looking statements. We cannot predict whether or to what extent the results of our collaboration with ZCorum will actually result in a paradigm shift for troubleshooting or a decrease in capital expenses for cable operators, such that we will realize revenues from our collaboration. Forward-looking statements are based on management's current, preliminary expectations and are subject to various risks and uncertainties, including (among others) intense competition in our industry; the ability of our customers to cancel or reduce orders; uncertainties concerning how end user markets for our products will develop; our lack of long-term supply contracts and dependence on limited sources of supply; potential decreases in average selling prices for our products; and on-going intellectual property litigation related to our hybrid television tuner products. In addition to these risks and uncertainties, investors should review the risks and uncertainties contained in MaxLinear's filings with the United States Securities and Exchange Commission, including risks and uncertainties identified in our Quarterly Report on Form 10-Q for the quarter ended June 30, 2013. All forward-looking statements are qualified in their entirety by this cautionary statement. MaxLinear is providing this information as of the date of this release and does not undertake any obligation to update any forward-looking statements contained in this release as a result of new information, future events, or otherwise.
