Subject: AW: [multimob] Revised draft charter text
Attachments: Untitled attachment 00003.txt

Dear all,
concerning the issue

> It is also a goal of the new working group to possibly standardize an agent based solution to
> reduce time delay and overhead effort e.g. on path re-construction. Both traffic and movement
> characteristic based and local agent based approaches to deciding on bidirectional
> tunnelling or remote subscription will be considered.

I have submitted a draft on 'Agent-based NEMO Multicast' for discussion on the ML which should provisionally be available at <http://www3.ietf.org/proceedings/staging/draft-von-hugo-multimob-agents-00.txt>

Comments are more than welcome!

However, I have to admit that at the moment the analysis part is still missing ;-(

Kind regards
Dirk
