Subject: [multimob] IGMP/MLD requirements and extensions drafts

Hi all,

I've submitted the following two drafts;

===

Filename: draft-liu-multimob-igmp-mld-mobility-req
Version: 00
Staging URL: <http://www3.ietf.org/proceedings/staging/draft-liu-multimob-igmp-mld-mobility-req-00.txt>
Title: Mobile Multicast Requirements on IGMP/MLD Protocols
Creation_date: 2007-11-12
WG ID: Individual Submission
Number_of_pages: 16
Abstract:
This document presents the requirements for IGMP/MLD protocols to allow the deployment of mobile multicast service. It is intended to provide useful guideline when adapting current IGMP/MLD protocols to support terminal mobility.

===

Filename: draft-asaeda-multimob-igmp-mld-mobility-extensions
Version: 00
Staging URL: <http://www3.ietf.org/proceedings/staging/draft-asaeda-multimob-igmp-mld-mobility-extensions-00.txt>
Title: IGMP and MLD Extensions for Mobile Hosts and Routers
Creation_date: 2007-11-12
WG ID: Individual Submission
Number_of_pages: 18
Abstract:
This document describes the IGMP and MLD protocol extensions for mobile hosts and routers. IGMP and MLD are necessary protocols for hosts to request join or leave multicast sessions. While the regular IGMP and MLD protocols support communication between mobile hosts and routers over wireless networks, this document discusses the conditions how mobile hosts and routers use IGMP and MLD in their communication more effectively.

===

Please review them. Any comments are welcome.
Regards,
