Subject: [jvt-experts] Is motion comp extension at pic border in FCD?

Experts,

I fielded a question here recently about what we do in AVC when a motion vector references beyond the border of the reference picture. I verified from the software (JM40d) that we do a constant extension at the borders of the picture for such motion vectors. However, I have not been able to locate the specification of this in the FCD. Am I overlooking the reference in the FCD or have we forgotten to specify it? Thanks much.

Sincerely yours,
Peter Borgwardt, VideoTele.com
