Subject: [jvt-experts] JVT-E022d7ncm.doc, A.7 Effect of level limits on frame rate (informative)

In JVT-E022d7ncm.doc, I believe the fourth line from the bottom of "**A.1 Effect of level limits on frame rate (informative)**" should not have an "i" next to 1080, as that unnecessarily overspecifies this line item. That line could be 1080/24p, 1080/30p, 1080/25i, 1080/30i or 60P when it gets to Level 5 (assuming Level 5 stays in...). So perhaps a better designation would be "1080" or "1080-HD".

Farther up in the chart, we find the terms "NTSC" and "PAL", both of which refer to analog television standards which (besides being analog-only) have a built-in hardwired framerate assumption of 29.97 FPS and 25 FPS respectively. Better terms might be 601/525 & 601/625, meaning a 601 sampling structure for typical 525 line and 625 line implementations respectively. Open to other ideas. (601-486 & 601-576?)
