Subject: [Fwd: H.264 encoder with rate control]

Dear Experts,

I know that the Coding Efficiency adhoc-group was working on a rate-controlled encoder and that there were some problems with it. But I missed the details because I had problems with the email reflector subscription.

Do we have a freely available encoder which includes rate control?

Best regards,
Karsten

Dear Dr. Suhring,

I am a working for Pulsent Corporation, based in Milpitas California, which is developing an object-based video codec. We are using your JM software to compare our own codec with the emerging H.264 standard. I would like to ask if you have or are aware of any freely available implementations that include rate control?

Best regards,
Rasmus
