TUCSON, Ariz. and WINCHESTER, Va., May 13, 2013 /PRNewswire/ -- AudioEye®, Inc. (OTCBB: **AEYE**), the creators of the Audio Internet™, the patented audio browsing and automated publishing technology, announced today it has been working under contract with Grafton Integrated Health Network and has launched its patented Audio Internet technology at Grafton's website **www.grafton.org**.

The company further announced that AudioEye has been hired by Grafton to work with the inventors and executives of Grafton to design, patent, and fully develop a new mobile behavioral health care technology platform designed to support the employees, clients and families that Grafton serves.

"We're so proud to be working with Grafton on what we at AudioEye feel is one of the critical issues in technology today: the ubiquitous access of internet and mobile content to all people regardless of any support needs they may have," stated Nathaniel Bradley, AudioEye's CEO. "Creating technology with Grafton has enriched AudioEye's culture with a humbling and first hand view of these innovative leaders who are poised to make long awaited leaps forward in the field of Behavioral Health using some of our technologies and many of their own inventions. It's an honor to witness their innovations coming to life through our work together and the pride our team is taking in AudioEye adding unique value for Grafton."

Grafton Integrated Health Network won the 2013 National Council Impact Award for "**Excellence in Behavioral Healthcare Management**" in March. This award recognizes organizations that demonstrate effective and innovative programs in the minimization of risk and liability. AudioEye's patented technologies have provided Grafton with a unique platform in which to optimize care-planning. It is expected that this mobile application will not only assist the trans-disciplinary team to track client progress on treatment goals, but also to ensure real-time communication, clinical decision-support, and true goal mastery. Grafton will ultimately market this product to other organizations both within the United States and internationally.

"Working with AudioEye has raised our standards of accountability. The use of mobile technologies allows us to truly focus on client outcomes and enables us to have real time information related to client progress. We are excited about the development of this revolutionary platform and believe it will change the way our clients and families utilize data-driven treatment and outcomes. We are thrilled to have an innovative "big data" technology to both compliment and contribute to treatment that results in enduring positive outcomes. Our vision is that it will greatly facilitate our mission to increase an individual's functional autonomy while simultaneously empowering the individual's naturalistic community based support systems," said Jim Gaynor, GIHN's CEO and President.

About Grafton Integrated Health Network

Grafton Integrated Health Network is a private, nonprofit organization that has provided a full continuum of services to people overcoming emotional, behavioral or developmental challenges. As an industry leader in behavioral healthcare, we empower individuals to lead better lives. Grafton provides continuous and coordinated services from short-term stabilization and residential services to outpatient to integrated therapeutic special education services and career and technical training. These programs along with a data-driven, trauma-informed model help the organization to develop successful plans of care and clients to thrive in a variety of settings.

Grafton provides a continuum of services to children, youth and adults including applied behavior analysis, early intervention, psychiatric residential treatment facilities, a short-term stabilization program, special education programs, community-based group homes, intensive outpatient program and outpatient services.
