☒ Recommended**Coollest on the market**

I love the cool faucet it lets you know -whit out sticking your hand in to the water what temperature the water is from just looking at it. That's right it show's blue when the water is cold and it changes to red when the water is hot, so cool, plus this faucet it built it's smooth to change and use the pull down head of change the water stream from stream to spray. I have had it for over a year now and am so glad I picked it out of all the choices

☒ Recommended**Feels a bit cheap, Not that easy to adjust flow of water, instruction manual is not clear**

The pull-down sprayer is too light on the hand and feels cheaply made. The fasteners to secure the two other holes for a 3-hole sink are also very cheaply made. It's not designed to smoothly adjust the right amount of cold water one would like. It's easy to adjust temperature, but most of the time people use cold water, so there should be a better gradient of adjustment to control the degree of flow. The supply lines are very thin plastic ones. The instruction manual is not clear. For a \$269 faucet you'd think the instruction manual would be specific on whether or not you are looking at the right model. They just bundled all their pull-down sprayer faucets together, and pretended like no one cares about accounting for the parts that the kit comes with. One is left assuming for the best looking through the manual to gather parts. For \$269, I'd expect a more sturdy-feeling faucet, with better quality materials, and a clear instruction manual dedicated to this particular faucet. Other than that, the design for install with fewer parts/tools for assembly and longevity as pertaining to minimizing leaks is an upgrade from traditional faucets that were out a decade ago.

Love this faucet. Bought another Delta but it had the odd bubble spray and not a complete circular spray. This works as expected and the temperature light tells you how hot or cold the water is. I always wash dishes by hand and that feature is quite nice. It also has a great look with the knurled spray head with the effective magnet lock.

☒ Recommended**Love, love, LOVE IT!!!!**

I brought this a few weeks ago and absolutely LOVE it!!! It's soooo pretty I had to go back to the store to get dish towels to complement it! I can't stay out of my kitchen. Moms new to! :). I'm assuming that if the light does go out, its a replacement part to have it up and running. No issues as

of yet. It took hubby less then 20 minutes to install. If only it was touchless that would have sealed the deal.... :)

This faucet is beautiful and functional. Easy to install, especially for someone who never removed or installed a faucet before this one. Hardest part was getting old faucet out. This one is smooth and features are easy to use. I trust Delta and this version does not disappoint. Also love the color changing display- always know what the temperature is of your water.

Solid well built faucet. Very smooth movement from side to side. Extremely easy to install compared to other faucets. The built in PEX hoses are a great revision to the old braided hoses and are color coded for ease of identification. The TempSense Indicator works great without any batteries or power. The head unit pulls out and retracts very well. The magnetic catch is a nice addition that the old faucet did not have and never seemed to seat well or in the same position. Overall very satisfied.

The Delta Allentown Single-Handle Pull-Down Sprayer Kitchen Faucet with a great feature TempSense Indicator and Soap in SpotShield Stainless. My family and I really enjoy the indicator color change from cold, warm and hot water flowing. The pull down kitchen faucet is easy to pull and interchange the water flow setting with a quick switch for spray and water stream flow. Rather easy to install with the help of the manual. The kitchen faucet looks rather beautiful in our kitchen sink. The soap dispenser holds a good amount of dish soap. My overall timing in installing the faucet was nearly 20 minutes. I really like the stainless finish and spotshield. While installing the water line connections was a little bit of a hassle but once you find the correct direction and red/blue supply valve connection was easy to place and tighten. Again make certain to follow the directions for easy, fast and reliable results.

This one sleek faucet! In kitchen faucets you get what you pay for so never go dirt cheap! If you pay under \$100 it is gonna be replacing it again in less than a year. Delta in my opinion is the best company out there and if you buy one of these you will understand. The thing is easy to install in less than an hour and works great no leaks. The spray pattern is good for blasting food off a plate. It comes with a soap dispenser which i will install later when i add a extra hole in my sink. It can be installed on a 2 hole, or 4 hole sink and use both the faucet and the soap dispenser. My sink was a 3 hole which the faucet install beautifully but no hole for the soap dispenser. Great look and great feel!

ho...

We live in the desert southwest and in the summer the first x seconds of water are always lava hot. It's annoying as an adult and a little scary as a parent. This seemed like a fun and practical way to get a rough idea of water temp before our little ones stick their dirty, muddy, yogurt coated, sticky, cheesy, peanut butter and jelly coated paws into scorching hot water. So far so good and it's actually added a fun factor to hand washing which makes it feel less like a chore for them. (bonus) Aside from the obvious kid related perks this is a very nice faucet that looks great with our kitchen. Modern and handsome come to mind and I really like the knurled handle. It also feels nice and solid, like it's well made and should take some abuse in our household. Thumbs up to Delta for a cool product, we're fans for sure.

I like the way this faucet looks. The stainless steel finish looks much classier than chrome. This faucet has a life time warranty. What is unique with this faucet, which is pretty cool, is that it has a color coding on the sprayer end to show you whether the water is cold, warm or hot. This might help you getting your hand burnt from hot water. The sprayer end also has a strong magnet in it which combined with the weight pulls the sprayer neatly back into place. The sprayer end also has a different "knurled" pattern on it. I'm not sure what I think about it but maybe it will grow on me. Like most faucets you buy now it supports a 1, 2, 3 or 4 hole configuration. I think it looks better with the faucet mounted in one hole without the escutcheon, but if you have more holes in your sink then you have options. The installation is pretty straightforward like most other faucets. As long as you have shutoffs it is pretty easy to do. I like that the sprayer button stays pressed instead of springing back every time. This is useful if you want to spray something but use both hands to hold it. This also comes with a soap dispenser with a small bottle that screws on under the sink. I always have a hard time filling the bottle from the top with the right amount of soap so it doesn't overflow and once I had one break and had a lot of soap under the sink. What I have started doing now is connecting a plastic hose to the soap dispenser and putting it into the biggest soap bottle I can find sitting under the sink. This way you can go for ages without having to fill it with soap and you don't have to figure out exactly how much soap to put in the bottle.

...

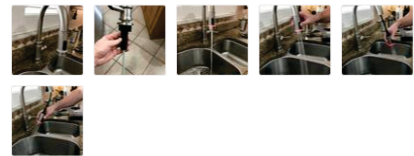

Delta has outdone itself with this faucet. The Allentown single-handle pull-down sprayer kitchen faucet is simply amazing. Simple because it has a modern industrial look, yet achieves a classy modern touch to my home. Amazing because it has awesome features! I installed this in my kitchen. Delta provides you with everything you need to install (except tools). It has a plate that can be used if you have multiple holes that need to be covered. It has different valves for custom fit plumbing. It has O-rings to form a good seal and prevent leaks. The water lines are color coded. Once the old faucet was removed, the new one was installed in minutes. It was working great from the start. Make sure you remember which valve is hot and cold water. Hot is usually on the left. When you see the water streaming, there is a ring that turns blue for cold, purple for warm, and red for hot. That is perfect for the times when you need to get the water hot, but don't want to keep running your finger through it until it burns. The water pressure could be a little better, but it gets the job done.

This faucet is a replacement for a kitchen sink faucet that didn't work out. We had installed an ...

This faucet is a replacement for a kitchen sink faucet that didn't work out. We had installed an automatic faucet several years ago but we ended up turning off the automatic function because the faucet turned itself off and on any time there was steam in the sink. (Think draining a pot of pasta or potatoes). This faucet installed without a single hitch. The instructions were clear and concise. I like the fact that the temperature selector moves from vertical to horizontal. Most handles move toward the rear and also toward the front. The problem is them is when you push them to the rear they can hit or get close to the back splash. Another nice feature of this unit is that the spout rotates through more than 180 degrees. Therefore it can be rotated completely out of the way at the back of the sink. The ring that shows the temperature of the water is a wonderful touch. Currently our cold water is nearly at freezing and not having to stick your hand into ice cold water to see if it is warm yet is great. I have a minor objection to the way the hookup tubes are marked. If the tubes are hooked up with the red (hot) tube on the left hand angle valve and the cold (blue) on the right hand valve then you get hot water by pulling the temperature handle forward. This is backwards to every other faucet we have. I solved the issue by switching the tubes to the opposite valves. Now you get hot water by moving the handle to the vertical position. As far as looks go, this faucet is fairly unique, more steam punk than streamlined which is possibly indicating upcoming trends? The effect is very nice.

It's a very nice-looking faucet with great functionality, including the soap dispenser. The temperature sensor is very useful and you find yourself looking at the color changing display automatically after a few uses. This is a nice safety feature and should be on all faucets. This was an easy install, since I added a new sink at the same time. It came with everything needed for installation, including PEX supply lines. Since the spigot swivels 360 degrees, you can install it for left or right-hand use. I had recently re-plumbed a good bit of this house, and replaced the old pipe with PEX, so the connections were very easy. We like the magnetic dock that brings the pull-out sprayer right back into place after use. The finish is nice also with resistance to spots and fingerprints. It has a nice spray pattern or with the push of the button a steady single stream. It makes it easy to fill a pot or to rinse out the sink (or in some cases, children's hair). The temperature indicator ring is exceptionally bright, something I didn't expect. With the modern industrial look, it is a very nice addition to any home. We love it.

Recommended

My wife has been wanting a new kitchen faucet for quite some time. Our old one had been dripping ...

My wife has been wanting a new kitchen faucet for quite some time. Our old one had been dripping for years but I couldn't figure out how to take it apart to fix it. This Delta Allentown TempSense kitchen faucet is very sleek and modern and my wife loves that she no longer has to turn on the hot and the cold individually like she did on our old faucet. This faucet is absolutely stunning once it's installed. At first I thought it was a little large the way it swept up in the air so high before coming back down but it grows on you quite quickly. I also thought it was kind of huge with the girth of the faucet neck but it gives it a very solid feel once you start using it. I love that we no longer have a separate sprayer for cleaning dishes. We were able to utilize that hole for the new under counter soap dispenser. My wife absolutely loves that you can fill the soap dispenser from above. All you have to do is pull up on the pumper portion which exposes the hole that you can squeeze more dish soap directly into the container below the counter. You no longer have to lay on your back under the sink to remove it for filling like some other brands require. The faucet head has some very strong magnets in it and it holds the faucet head up tight to the neck of the faucet. All you have to do is give it a gentle tug to pull it down to spray the dishes or clean the sink. I also like how smoothly you can switch from a straight stream to a sprayer pattern with a simple push of a button. I'm not quite sure how the temperature ring on the head of the faucet works but it is really, really cool. Since this faucet doesn't plug into a wall and there are no batteries for it I'm assuming it works by the flow of the water flowing out of the faucet. The little ring turns from a white frosted glass color to a beautiful blue when the water is cold. It then turns to a purplish color as it starts to warm up and then to a full blown red color when it's hot. The first time my wife saw it after I installed it she thought it was the coolest thing ever. When I'm hand washing certain dishes my wife will usually wipes off the table, counters and stove. She used to always complain that the water was too hot when she tried to stick the sponge under the faucet to wring it out or make it damp for wiping. Now she can glance at the color of the faucet head and know whether the water is too hot or not. Sometimes it's the little things in life that make us happy ;O) The checkered pattern on the faucet head at first seemed kind of odd to me but now that I've used for a while I now realize they had to do some kind of texture so that your wet or soapy hands wouldn't slip off when trying to pull it down or retract it. I'm glad they did it now that I have been using it every day. This faucet comes with something called SpotShield Technology and I must say it works. When ever you get the faucet wet all you have to do is give it a gentle wipe with a dish towel or a damp sponge and it looks just like new again. If you are like me and you need to replace your dishwasher air gap cover here is the matching one we were able to find. It matches perfectly. Delta Faucet 72020-SS Accessory Air Gap, Stainless Installation on this faucet wasn't to bad once all was said and done. This was my first time working with PEX water lines but I had no problems with them. I did make sure to make gentle loops that are no tighter than 8" when hooking them up to my valves under the sink. The valves under my sink were the old type that have the plastic oval handles. Since I needed 3/8" instead of my old size of 1/2" water connections I went ahead and upgraded my valves under the sink to the new 1/4 turn stainless ones which I like better. Once all was said and done it looks real nice under the sink with no leaks. If you are looking for a very sleek, contemporary and a little industrial (according to my wife) kitchen faucet this is the one for you. I absolutely love it and look forward to using it for years to come. Here is some more info from the manufacturers web site. SpotShield technology defends your faucet against spots and stains Single handle lever provides simple control over flow and temperature High-arc pull-down spout swivels 360° Finish stays cleaner longer with SpotShield technology MagnaTite docking keeps the kitchen pull-down spray wand firmly in place with a powerful integrated magnet, so it stays docked when not in use DIAMOND seal technology features a valve embedded with diamonds to ensure like-new operation for the life of the faucet Touch-clean soft, rubber spray holes allow for easy removal of hard water build-up Switch allows for easy toggle between spray and stream Includes matching finish soap dispenser Includes optional escutcheon Faucet and finish lifetime limited warranty Fits 1, 2, 3, or 4-hole installations with included optional escutcheon

In awe of this product. It is like a masterpiece in the kitchen, a sculpture of sorts. It was very easy to install. I was wondering what I would cover the original sprayer hole with but it comes with a dispenser for soap to fill in that vacant hole. Amazing. I love it. I love that there is a colored temperature ring from blue to magenta to let you know the water temp. The sprayer, which I have to kinda of hand push back into the neck which is no problem looks into place so it is not dangling out of the faucet neck and looking a little odd. The finish is beautiful and hand print resistant. Mainly metal for a change. I looked at some that were mainly plastic and knew they would not last. The price of it is worth paying and should last a life time if not abused. The water pressure does fluctuate depending on your own water pressure in your house. Mine is great. Can't say enough good things about this beauty and it's design and well thought out features .

So easy to use

I love this faucet. Easy to grip, easy to switch the spray, lightweight. The hose is perfectly balanced to pull down and push back up. I wasn't interested in the heat indicating band but, after a couple of months, I've come to rely on it to know when the water is the right temperature while I am doing another small task near the sink. Best kitchen faucet I've ever had.

Like the faucet but LED stopped registering temp

Replaced an old faucet with this one, and mostly happy with it. Initially was concerned by clearance space to the right as it was close to soap dispenser, but this faucet allows you to have the handle in front so problem was solved. Functionally, the faucet has performed well, and we're constantly switching between spray and regular flow, and the nozzle remains in good shape and still retracts well. Unfortunately after about a year the LED light stopped registering temperature changes, and now just shows red no matter what the temperature is. Overall feel like this product is a bit overpriced for what you get.

Color change temperature light stopped working

We really liked this faucet, the temperature indicator light was fantastic. It is now stuck on red all the time, like Darth Maul's lightsaber. It is less than one year old. Contacting Delta. For \$269 we expected it to last.

Kind of cheap and overpriced

Landed on the Allentown mostly due to availability following failure of our kitchen sink. Wife liked this one well enough and the one I chose was several days out. Not a problem, Delta stuff is usually pretty good. Taking this thing out of the box was disappointing to say the least. Finish and materials on this are substandard. It so cheap and thin, its more like painted plastic. Considering the quality of some other manufactures int he \$150 price point, I expected a lot more than this for \$250. Install. Whoever picked the water lines for this... I hate you. The PEX lines are advertised as flexible but that you need to leave and 8" loop. Well these are just barely long enough to make an 8" loop, and you can forget about that anyway because they are so still, it feels like its going to snap in half before you ever even get it partially looped. This of course means the out of the box length is ridiculously long. So cut them right? Expect Delta has a page worth of warning that if the cuts aren't perfectly straight, you will have leaks or general failures. Cool. Also, thanks to whoever decided to go with a 1/2" connection instead of that standard 3/8". That was fun hunting down conversion fittings. ALSO, plastic PEX lines vs braided steel line of competitors. CHEAP. LED is gimmicky, doesn't work with a low stream and is rather inaccurate. Curvature of the spout is wrong, so its splashes horribly when using the show spray setting. Engineering on this one is just a miss. So I installed a \$250 piece of junk. And now my impression of Delta is that they cheap despite their price tag.

Beautiful faucet!

Love the look and feel of the faucet. It is a great height for washing dishes and filling up pots with water. The spray nozzle fits nicely in your hand and is easy to use for every day use. The light up temperature feature has been a good addition to our kitchen. It has helped my children to know the temperature of the water when helping to clean and cook.

We've had this faucet for just over a year and the light for the temperature sensor is no longer working which is very disappointing. It was fantastic at first! What a genius idea to have color coded temperature from blue (cold) to pink (warm) to red (hot)! But after a year, the blue no longer registers. It's either red....or a lighter shade of red. Not sure what happened but definitely disappointed as this wasn't inexpensive! We're long time repeat customers of Delta products in the past and have always been happy with them.

Faucet LED Burn Out

Faucet itself is fine but what sold me on choosing this particular model was the LED temperature ring indicator it burned out after a few months of the installation. Everything upside down in the world right now really hasn't been a priority to contact anyone to replace it. This seems to be a common complaint so I suspect is a fault in the design.

Feb 28, 2020

☒ Recommended**Massive Improvement**

This faucet is a massive improvement over my original faucet which would start leaking only six months after the neck was replaced. This one does not leak at all; not a single drip. Installation was easy compared to the old one. The LED temp function is working fine on mine. The various discussions regarding a battery may be a little off. There is no indication of a battery at all in the manual. From its behavior I would guess there is some kind of generator in the spray nozzle that works off water flow. The difficulties others have had just MIGHT be some sort of clog making the generator not work.

LED stopped working after 5 months

This faucet was unique and eye-catching with the color-changing LED ring on the nozzle which is why we purchased it for our kitchen remodel. Unfortunately, it's been only five months and we've noticed the LED stays bright red even when the water is ice cold. So, now we'll have to reach out to Delta to see how this can be fixed or replaced. Very frustrating!

Customer review from deltafaucet.com

Beautiful Faucet, bad light

We bought this to help the kids identify when the water was too hot to wash their hands, it worked great for the first 3 months. Now the light only shows as red. Took it apart, can't figure out how replace the battery (no instructions).

Great product. Easy of use and great appearance. Have had it for one week and definitely meets our expectations. One suggestion to Home Depot: Make your advertised in-store installation price the same as your contract plumber price. The plumber charged \$40 more.

Not entirely pleased :(

I love the way this looks in my kitchen, but this faucet leaks at the on/off level position and I have to ensure it sits correctly in an upright position. Also, in the three years that I've had this, I've had to replace the lever (on/off) twice.

LED indicator stopped working after 4 months

We had our contractor install this as a part of our kitchen remodel. It's has been a great faucet but after only having it for 4 months the LED indicator stopped working. I checked the screen to make sure it wasn't clogged and it wasn't. I have looked all over the website and haven't found any troubleshooting pages for this.

Beautiful faucet, but....

This faucet is only 6moths old and the LED temperature indicator is malfunctioning. Stays red all the time. We did not buy it for this feature, but it was a nice little bonus that we adapted to really liking. This was an expensive purchase as part of a complete kitchen remodel. It doesn't keep us from enjoying the look and use of this faucet, but it's very disappointing to have anything go wrong...especially so soon. Hope there is an easy fix.

Love the high end look, the high spout, the sprayer and really love the temperature indicator. The spotshield was not something I was really looking for but it is a nice feature for sure. Only thing remotely bad I can say is that the weight on the faucet line should be heavier as the line that comes with the unit is pretty heavy. I am remedying this with using the one that came with it and also adding the one from which I replaced with this unit.

Nice Features But Not Quite Excellent

The installation took approximately 1.5 hours. As others have stated, some of the older faucets take time to remove. We had a high end Pfister faucet that was finally giving up on us. It took quite a bit of work to remove. The Delta faucet is much, much lighter than the Pfister. It does not feel as durable. However, the water pressure is substantially stronger than the old faucet. I am giving this faucet 3 stars due to the feel of the faucet and the fact that it includes a sprayer hose weight that is too light for the faucet head. It does not contract on its own. The weight is way too light for the weight of the faucet head. I am going to sub the weight out for the heavier weight included with my old faucet to see if it makes a difference. However, as a positive, the pex hoses included with the faucet are very nice. You can cut them to size. That part worked very well and looked much neater in the cabinet. Big plus there. Negatives are definitively the feel of the faucet (does not feel like quality) and the sprayer head hose (Poorly designed and weight is too light / does not retract well). Positives are the fingerprint free finish, the use of pex hoses and the power of the faucet.

Its a great looking faucet, it operates very well it has a nice working handle unlike some of the others I like how the nozzle goes back into the faucet only if I lift it up I like that much better and it sprays a powerful stream

I originally bought a Kohler faucet, but returned it when I saw this one. Everything about this faucet is top-notch. First off, no water spots. Delta's SpotShield stainless is spot on (pun intended). That alone is a huge plus. Now, the fancy part. I LOVE LOVE LOVE the light ring temperature indicator. Not only is it great for letting me know when the water's hot, it's a super cool conversation piece. People come over and are impressed by my faucet. I'm now the cool kid on the block. Function-wise, it works great. The sprayer button is easy to switch and aesthetically unobtrusive. All in all, I'm thrilled with my purchase and the quality and features of this Delta faucet.

This is a really nice faucet! It is well made and solid. I love that it shows the temperature of the water. It is a very LARGE faucet - very large, so if your space can't handle that you might want think about another faucet. Delta has consistent quality products that last.

This is a great faucet. It looks great and is very easy to install. The only downside that i've encountered was the TempSense Indicator stopped working twice. Both times, I was able to get a replacement spout from Delta with no hassle. If it wasn't for this issue, I would have gladly given a higher rating.

★★★★★ This Delta single-handle pull down kitchen faucet with sprayer and temperature sense indicator is... This Delta single-handle pull down kitchen faucet with sprayer and temperature sense indicator is just what a kitchen needs without putting a dent in your wallet. This faucet set is beautifully modern with an industrial vibe to it. The faucet also include a matching finish soap dispenser (stainless steel). The magnetite docking keeps the kitchen pull-down spray wand firmly in place so it will not fall or release from the mount unless you pull the sprayer down. The TempSense indicator is one of my favorite features of this faucet. The colored lighting ring around the sprayer changes color with the temperature of the water. Cold is blue, warm is magenta and hot is red, to warn anyone using the faucet before putting your hands into the water stream. This is very helpful and a safety feature for us adults and homes with kiddos. I am looking forward to many years of use from this beautiful faucet. by Stradiot	Apr 10, 2018 ☒ DIY ☒ Seed Program Review (What's this?) ☒ Recommended	Helpful? Report Review

I selected this faucet to replace the chrome faucet that was installed by the previous owner. O...

I selected this faucet to replace the chrome faucet that was installed by the previous owner. Our kitchen sink is stainless steel, so this matches and blends in much better than the chrome look. The previous faucet also have more of a curve to it which would cause over spray anytime it hit a dish or glass in the sink. Unlike my old unit, another nice feature is that the sprayer can be turned on and it stays on until you flip it back to normal. This faucet is amazing. It exceeded my expectations. I can just feel the difference in the quality. It looks great in the kitchen. The little ring for the tempsense just adds a little modern touch. I am definitely a gadget person. The kitchen water takes forever to get warm and we would have to feel the water to make sure it was warm before starting the dishwasher. Now, I just turn it on and wait for the ring to turn red. It is also a good warning if the kids get in there to help with the dishes. I can tell if they have it turned up too high. While this was not a feature I would have gone for normally, I really like it now that I have it. The installation was a breeze for me. There was thought put in the design to make sure it was easy to slide all the needed hoses through the openings. The connectors matched up to those already installed. My home was built in 2005. I did not have to worry about any changes here. It may have taken 15 to 20 minutes to change out completely having to take everything out from under the sink and collect my tools and bucket. I would definitely recommend this faucet and have. Sometimes you just need to spend a little more for the quality.

I had a one-hole faucet by a major mfg. I wasn't happy with operation after the complicated installation. This one looked great so I tried it. Installation was a breeze and the operation seems flawless. The volume is very easy to adjust. I love the pull down sprayer. It doesn't have to be pulled down for the spray setting. A simple rocker switch on the spray head changes it from aerator to spray. The temp indicator is great and works well. I like that it included a pump soap dispenser. It works well and no reaching under the sink every time you wash dishes. Just fill the bottle and then you just pump it directly into the sink. Best kitchen faucet I've owned.

This Allentown single handle kitchen faucet is not your builders grade kitchen faucet but a high ...

This Allentown single handle kitchen faucet is not your builders grade kitchen faucet but a high end kitchen faucet which will provide many years of reliable service. Made by Delta, a very reputable bath and kitchen manufacturer, so you know longevity and parts availability will never be an issue. This kitchen faucet will fit in any 1, 2, 3, or 4 hole kitchen counter using it's decorative plate to cover holes not used. Valve body appears to have the latest ceramic disc shutoffs so frequent cartridge replacements are a thing of the past. Spray head has both spray or stream flows and meets all current EPA compliant for low flow water savings. Documentation and instruction sheets provided are well written and thorough in every detail which includes a parts listing so be sure and keep the paperwork when you need it for replacement hoses or cartridges years from now. Extremely easy to install and the most difficult task installing this kitchen faucet will most likely be removing the old failed kitchen faucet. Be sure and use plumber's putty under the decorative plate to insure a watertight seal where the faucet meets the kitchen deck to minimize water migrating on the underside of the counter. Typical homeowner should have this faucet install in less than 30 minutes and that's taking your time. Thank you Delta for a well designed kitchen faucet

This Kitchen faucet is an excellent addition to our kitchen. It is a high end item with smooth acting handle that is easily adjusted for the desired temperature. We like the built in nozzle temp indicator as we don't have to keep putting our hand under the water flow to verify hot, medium or cool water, we just need to look at the sensor. The quality of this faucet is the best. We didn't use the soap dispenser with this install but it does come with one if you like.

I installed the Allentown Single Handle Pull Down Temp Sense Kitchen Faucet last weekend as a rep...

I installed the Allentown Single Handle Pull Down Temp Sense Kitchen Faucet last weekend as a replacement for a 12 year old builder grade one that never really complimented the look of a stainless steel appliance kitchen. I wanted something that was kind of contemporary yet matching in style with the the new drawer and door pulls my mother-in-law chose. The Allentown Faucet fit the bill very nicely. The installation was quick and almost easy - I had a heck of a time removing the old faucet (shouldn't have loaned out my basin wrench years ago). In spite of a very tight space to work in between the back of the sink and the kitchen wall (2 1/2") the new faucet with its extremely well designed installation hardware went in painlessly in less than 10 minutes once the old one was out. The entire job took maybe two hours from start to finish and included a major undersink area cleaning and removing and replacing the disposal so I could squeeze into the sink base cabinet to do the swap out. The new faucet is great. The pull down feature is really handy and the two different click on/click off spray settings are far better than anything I've owned before. The pull down nozzle is held firmly in place by some kind of magnet and reaches almost to the bottom of the 10" deep sink when needed. The Temp Sense feature is really cool. The faucet nozzle has a translucent maybe 1/8" wide ring that lights up blue when cold water is running and a reddish color when the water is hot. The jury on the Spotshield finish is still out but all in all the Allentown faucet is a big hit.

The faucet looks great and works just as well. I replaced a builder grade faucet with this and am impressed with how well it works. I also enjoy the color ring - it is helpful to see if I have cold water for drinking or if the water is too hot for washing. It is really convenient. The magnet to hold the spout in place is nice to lock it in when you are done with the sprayer. I like the style of the faucet including the knurling on the sprayer - it gives kind of a commercial look. Installation was easy - since I replaced an existing faucet. The soap dispenser is nice too - it matches the faucet and is convenient for getting soap when washing dishes or hands.

I love the look of this faucet: very professional and classic. Not only is it great looking, but very functional. The "Temp Sense" technology enables you to see the water temperature, saving water and time. The head pulls down or can be popped out to reach items deeper in the sink. A powerful magnet returns it securely in place. It comes with water supply lines and a matching soap dispenser. I've also noticed it stays relatively spot free.

Delta has never disappointed me and the trend continues. The Temp Sense Indicator on this Kitchen Faucet clearly shows when water is cold or hot with the color-changing display. It changes from blue to red as the water temperature rises... Delta has an integrated magnet to pull your faucet spray wand into place. Installation is simple enough and with the matching soap dispenser is a great looking addition to our kitchen remodel.

PERFECT! This Delta is just like my other units. Delta makes the best units. This baby was super easy to install. It came with all the parts and easy directions. It took me less than an hour, and then a few minutes to test it all out. The pull down is flawless. The fit and finish is true to Delta Finishes. My girlfriend and I made the best decision. We are hoping it will be there for at least 20 years.
