Internet Information Services

Internet Information Services (IIS) 6.0 is a powerful Web server that provides a highly reliable, manageable, and scalable Web application infrastructure for all versions of Windows Server 2003. IIS helps organizations increase Web site and application availability while lowering system administration costs. IIS 6.0 supports the [Microsoft Dynamic Systems Initiative](#) (DSI) with automated health monitoring, process isolation, and improved management capabilities.

For information about other Windows Server technologies and services, see the complete list of [Windows Server 2003 Technology Centers](#).
