Total Files Size (in bytes):	144748

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Doc Code: MFEE.C.AD
Document Description: Maintenance Fee Address Change

PTO/AIA/47 (11-18)
Approved for use through 09/30/2021. OMB 0651-0016
U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE
Under the Paperwork Reduction Act of 1995, no person is required to respond to a collection of information unless it displays a valid OMB control number.

"FEE ADDRESS" INDICATION FORM

Address to:
Mail Stop M Correspondence
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

-OR-

Fax to:
571-273-6500

INSTRUCTIONS: The issue fee must have been paid for the application(s) listed on this form. In addition, only an address represented by a Customer Number can be established as the fee address for maintenance fee purposes (hereafter, fee address). A fee address should be established when correspondence related to maintenance fees should be mailed to a different address than the correspondence address for the application.

When to check the first box below: If you have a Customer Number to represent the fee address.

When to check the second box below: If you have no Customer Number representing the desired fee address, in which case a completed Request for Customer Number (PTO/SB/125) must be attached to this form. For more information on Customer Numbers, see the Manual of Patent Examining Procedure (MPEP) § 403.

For the following listed application(s), please recognize as the "Fee Address" under the provisions of 37 CFR 1.363 the address associated with:

☑ Customer Number: 00197

OR

☐ The attached Request for Customer Number form (PTO/SB/125)

PATENT NUMBER (if known)	APPLICATION NUMBER
9,898,014	14/984,422

Completed by (check one):

☐ Applicant/Inventor

☑ Attorney or Agent of record 63,809
Reg. No.

☐ Assignee of record of the entire interest. See 37 CFR 3.71. Statement under 37 CFR 3.73(c) (Form PTO/AIA/96) is enclosed or was filed on

Requester's telephone number

April 18, 2019
Date

NOTE: Signatures of all the inventors or assignees of record of the entire interest or their representative(s) are required. If the assignee is a juristic entity, this form must be signed by a patent practitioner (attorney or agent) of record. Submit multiple forms if more than one signature is required, see below*.

☐ *Total of _____ forms are submitted

This collection of information is required by 37 CFR 1.363. The information is required to obtain or retain a benefit by the public, which is to indicate (and for the USPTO to process) a fee address. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 5 minutes to complete, including gathering, preparing, and submitting the completed form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND COMPLETED FORMS TO THE PREVIOUS ADDRESS. **SEND COMPLETED FORMS TO: Mail Stop M Correspondence, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

ISSUE NOTIFICATION

The projected patent number and issue date are specified above.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)

The Patent Term Adjustment is 0 day(s). Any patent to issue from the above-identified application will include an indication of the adjustment on the front page.

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Application Assistance Unit (AAU) of the Office of Data Management (ODM) at (571)-272-4200.

APPLICANT(s) (Please see PAIR WEB site http://pair.uspto.gov for additional applicants):

COMMENTS ON STATEMENT OF REASONS FOR ALLOWANCE

Mail Stop Issue Fee
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Applicant confirms with appreciation the receipt of the Notice of Allowability for this application.

Applicant recognizes that in accordance with M.P.E.P. § 1302.14, the statement of reasons for allowance need not set forth all of the details as to why the claims are allowed.

Consequently, Applicant may assert that the stated reasons for allowance are not the only reasons for which the claims are allowable. The claims may be allowable for other reasons as well.

In addition, Applicant does not concede that all of the limitations identified in the statement are necessary to distinguish the prior art of record or to satisfy the requirements of 35 U.S.C. § 112. In addition, the statement does not assert, and Applicant would not concede, that the stated reasons have any bearing on the patentability of claims in any other application directed to the disclosed subject matter.

In addition, Applicant notes that each dependent claim stands on its own and is allowable on its own merits. In particular, each dependent claim may be allowable on the basis of a combination of some of the features recited in the dependent claim and its base claim(s), which

The Integration Group of The Americas Ex. 1004-Page 7
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

combination of features may not include all of the limitations identified in the reasons for allowance.

These comments are being filed concurrently with payment of the Issue Fee. Please charge any fees, if any, associated with the submission of this paper to Deposit Account Number 033975 (Ref. No. 034392-0444743). The Commissioner for Patents is also authorized to credit any over payments to the above-referenced Deposit Account.

Respectfully submitted,

Date: 10 January 2018

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: Mail **Mail Stop ISSUE FEE**
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
or Fax (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

909 7590 10/10/2017
Pillsbury Winthrop Shaw Pittman, LLP
PO Box 10500
McLean, VA 22102

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission
I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below.

1. Change of correspondence address or indication of "Fee Address" (37 CFR 1.363).
- ☐ Change of correspondence address (or Change of Correspondence Address form PTO/SB/122) attached.
- ☐ "Fee Address" indication (or "Fee Address" Indication form PTO/SB/47; Rev 03-02 or more recent) attached. **Use of a Customer Number is required.**

2. For printing on the patent front page, list
(1) The names of up to 3 registered patent attorneys or agents OR, alternatively,
(2) The name of a single firm (having as a member a registered attorney or agent) and the names of up to 2 registered patent attorneys or agents. If no name is listed, no name will be printed.

1 _____
2 Pillsbury Winthrop Shaw Pittman LLP
3 _____

3. ASSIGNEE NAME AND RESIDENCE DATA TO BE PRINTED ON THE PATENT (print or type)

PLEASE NOTE: Unless an assignee is identified below, no assignee data will appear on the patent. If an assignee is identified below, the document has been filed for recordation as set forth in 37 CFR 3.11. Completion of this form is NOT a substitute for filing an assignment.

(A) NAME OF ASSIGNEE: AmpliSine Labs, LLC

(B) RESIDENCE: (CITY and STATE OR COUNTRY): Lubbock, TX

Please check the appropriate assignee category or categories (will not be printed on the patent) : ☐ Individual ☑ Corporation or other private group entity ☐ Government

4a. The following fee(s) are submitted:
- ☑ Issue Fee
- ☐ Publication Fee (No small entity discount permitted)
- ☐ Advance Order - # of Copies _____

4b. Payment of Fee(s): **(Please first reapply any previously paid issue fee shown above)**
- ☐ A check is enclosed.
- ☐ Payment by credit card. Form PTO-2038 is attached.
- ☑ The director is hereby authorized to charge the required fee(s), any deficiency, or credits any overpayment, to Deposit Account Number 033975 (enclose an extra copy of this form).

5. **Change in Entity Status** (from status indicated above)
- ☐ Applicant certifying micro entity status. See 37 CFR 1.29 — NOTE: Absent a valid certification of Micro Entity Status (see forms PTO/SB/15A and 15B), issue fee payment in the micro entity amount will not be accepted at the risk of application abandonment.
- ☐ Applicant asserting small entity status. See 37 CFR 1.27 — NOTE: If the application was previously under micro entity status, checking this box will be taken to be a notification of loss of entitlement to micro entity status.
- ☐ Applicant changing to regular undiscounted fee status. — NOTE: Checking this box will be taken to be a notification of loss of entitlement to small or micro entity status, as applicable.

NOTE: This form must be signed in accordance with 37 CFR 1.31 and 1.33. See 37 CFR 1.4 for signature requirements and certifications.

TITLE OF INVENTION: REMOTE CONTROL OF FLUID-HANDLING DEVICES

APPLN. TYPE	ENTITY STATUS	ISSUE FEE DUE	PUBLICATION FEE DUE	PREV. PAID ISSUE FEE	TOTAL FEE(S) DUE	DATE DUE
nonprovisional	SMALL	$480	$0	$0	$480	01/10/2018

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the ENTITY STATUS shown above. If the ENTITY STATUS is shown as SMALL or MICRO, verify whether entitlement to that entity status still applies.

If the ENTITY STATUS is the same as shown above, pay the TOTAL FEE(S) DUE shown above.

If the ENTITY STATUS is changed from that shown above, on PART B - FEE(S) TRANSMITTAL, complete section number 5 titled "Change in Entity Status (from status indicated above)".

For purposes of this notice, small entity fees are 1/2 the amount of undiscounted fees, and micro entity fees are 1/2 the amount of small entity fees.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Maintenance fees are due in utility patents issuing on applications filed on or after Dec. 12, 1980. It is patentee's responsibility to ensure timely payment of maintenance fees when due. More information is available at www.uspto.gov/PatentMaintenanceFees.

The Integration Group of The Americas Ex. 1004-Page 58
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: Mail **Mail Stop ISSUE FEE**
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
or Fax (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

909 7590 10/10/2017
Pillsbury Winthrop Shaw Pittman, LLP
PO Box 10500
McLean, VA 22102

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission
I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below.

EVERETT, CHRISTOPHER E	2121	700-282000

1. Change of correspondence address or indication of "Fee Address" (37 CFR 1.363).
- ❑ Change of correspondence address (or Change of Correspondence Address form PTO/SB/122) attached.
- ❑ "Fee Address" indication (or "Fee Address" Indication form PTO/SB/47; Rev 03-02 or more recent) attached. **Use of a Customer Number is required.**

2. For printing on the patent front page, list
(1) The names of up to 3 registered patent attorneys or agents OR, alternatively,
(2) The name of a single firm (having as a member a registered attorney or agent) and the names of up to 2 registered patent attorneys or agents. If no name is listed, no name will be printed.
1 _____
2 _____
3 _____

3. ASSIGNEE NAME AND RESIDENCE DATA TO BE PRINTED ON THE PATENT (print or type)

PLEASE NOTE: Unless an assignee is identified below, no assignee data will appear on the patent. If an assignee is identified below, the document has been filed for recordation as set forth in 37 CFR 3.11. Completion of this form is NOT a substitute for filing an assignment.

(A) NAME OF ASSIGNEE (B) RESIDENCE: (CITY and STATE OR COUNTRY)

Please check the appropriate assignee category or categories (will not be printed on the patent) : ❑ Individual ❑ Corporation or other private group entity ❑ Government

4a. The following fee(s) are submitted:
- ❑ Issue Fee
- ❑ Publication Fee (No small entity discount permitted)
- ❑ Advance Order - # of Copies _____

4b. Payment of Fee(s): **(Please first reapply any previously paid issue fee shown above)**
- ❑ A check is enclosed.
- ❑ Payment by credit card. Form PTO-2038 is attached.
- ❑ The director is hereby authorized to charge the required fee(s), any deficiency, or credits any overpayment, to Deposit Account Number _____ (enclose an extra copy of this form).

5. **Change in Entity Status** (from status indicated above)
- ❑ Applicant certifying micro entity status. See 37 CFR 1.29 — NOTE: Absent a valid certification of Micro Entity Status (see forms PTO/SB/15A and 15B), issue fee payment in the micro entity amount will not be accepted at the risk of application abandonment.
- ❑ Applicant asserting small entity status. See 37 CFR 1.27 — NOTE: If the application was previously under micro entity status, checking this box will be taken to be a notification of loss of entitlement to micro entity status.
- ❑ Applicant changing to regular undiscounted fee status. — NOTE: Checking this box will be taken to be a notification of loss of entitlement to small or micro entity status, as applicable.

NOTE: This form must be signed in accordance with 37 CFR 1.31 and 1.33. See 37 CFR 1.4 for signature requirements and certifications.

DATE MAILED: 10/10/2017

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(Applications filed on or after May 29, 2000)

The Office has discontinued providing a Patent Term Adjustment (PTA) calculation with the Notice of Allowance.

Section 1(h)(2) of the AIA Technical Corrections Act amended 35 U.S.C. 154(b)(3)(B)(i) to eliminate the requirement that the Office provide a patent term adjustment determination with the notice of allowance. See Revisions to Patent Term Adjustment, 78 Fed. Reg. 19416, 19417 (Apr. 1, 2013). Therefore, the Office is no longer providing an initial patent term adjustment determination with the notice of allowance. The Office will continue to provide a patent term adjustment determination with the Issue Notification Letter that is mailed to applicant approximately three weeks prior to the issue date of the patent, and will include the patent term adjustment on the patent. Any request for reconsideration of the patent term adjustment determination (or reinstatement of patent term adjustment) should follow the process outlined in 37 CFR 1.705.

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

OMB Clearance and PRA Burden Statement for PTOL-85 Part B

The Paperwork Reduction Act (PRA) of 1995 requires Federal agencies to obtain Office of Management and Budget approval before requesting most types of information from the public. When OMB approves an agency request to collect information from the public, OMB (i) provides a valid OMB Control Number and expiration date for the agency to display on the instrument that will be used to collect the information and (ii) requires the agency to inform the public about the OMB Control Number's legal significance in accordance with 5 CFR 1320.5(b).

The information collected by PTOL-85 Part B is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450. Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Notice of Allowability	Application No. 14/984,422	Applicant(s) PHILLIPS, AARON	
	Examiner Christopher E. Everett	Art Unit 2121	AIA (First Inventor to File) Status No

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. ☒ This communication is responsive to *9/21/2017*.
   ☐ A declaration(s)/affidavit(s) under **37 CFR 1.130(b)** was/were filed on_____.
2. ☐ An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.
3. ☒ The allowed claim(s) is/are *1-23*. As a result of the allowed claim(s), you may be eligible to benefit from the **Patent Prosecution Highway** program at a participating intellectual property office for the corresponding application. For more information, please see http://www.uspto.gov/patents/init_events/pph/index.jsp or send an inquiry to PPHfeedback@uspto.gov.
4. ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

   Certified copies:

   a) ☐ All b) ☐ Some *c) ☐ None of the:
   1. ☐ Certified copies of the priority documents have been received.
   2. ☐ Certified copies of the priority documents have been received in Application No. _____ .
   3. ☐ Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

   * Certified copies not received: _____.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.
THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.

5. ☐ CORRECTED DRAWINGS (as "replacement sheets") must be submitted.
   ☐ including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date _____.

   Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).
6. ☐ DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

Attachment(s)

1. ☐ Notice of References Cited (PTO-892)
2. ☐ Information Disclosure Statements (PTO/SB/08), Paper No./Mail Date _____
3. ☐ Examiner's Comment Regarding Requirement for Deposit of Biological Material
4. ☐ Interview Summary (PTO-413), Paper No./Mail Date _____ .
5. ☐ Examiner's Amendment/Comment
6. ☒ Examiner's Statement of Reasons for Allowance
7. ☒ Other *PTO-2323 After-Final Consideration Pilot*.

/Christopher E. Everett/
Primary Examiner, Art Unit 2121

DETAILED ACTION

1. The Office Action is responsive to the communication filed on 9/21/2017.

2. The present application is being examined under the pre-AIA first to invent provisions.

3. Claims 1-23 are pending.

Allowable Subject Matter

4. Claims 1-23 are allowed.

5. The following is an examiner's statement of reasons for allowance:

Claims 1-23

Regarding claim 1, the prior art as described in the prosecution history describes:

A hosted, web-based, remote industrial monitoring and control system for geographically distributed facilities in oil and gas fields, the system comprising:

- a computer-implemented datastore storing:
    - a plurality of accounts, each account corresponding to an entity operating one or more geographically distributed oil or gas facilities, the accounts associating different oil or gas facilities with different entities; and
    - network addresses by which industrial monitoring or control equipment at the facilities is accessible via cellular network connections, the monitoring or control equipment including sensors or actuators;

- a computer-implemented facility-interface module or modules configured to obtain data from the sensors at the facilities and send commands to the actuators at the facilities via the cellular network connections; and

However, regarding claim 1, the prior art as described in the prosecution history does not describe:

- a computer-implemented web-interface module or modules configured to send instructions to present control interfaces in web browsers executing on user computing devices logged in to the accounts and to receive commands to control actuators from the user computing devices,
- wherein the system is configured to receive, with the web-interface module or modules, a user command to actuate an actuator entered via a presented control interface, identify a network address in the datastore corresponding to a facility at which the actuator is located, and send instructions with the facility-interface module or modules to the facility to actuate the actuator, and
- wherein: the plurality of accounts include a first account, a second account, a third account, and a fourth account;
    - the first account corresponds to a first group of oil or gas facilities, users of the first account being authorized to send commands to remotely control fluid handling devices at the first group of oil or gas facilities;
    - the second account corresponds to a second group of oil or gas facilities, the first group being different from the second group, users of the second

account being authorized to send commands to remotely control fluid handling devices at the second group of oil or gas facilities;

- the third account corresponds to the first group of oil or gas facilities, users of the third account being authorized to view reports of data from fluid handling devices at the first group of oil or gas facilities; and
- the fourth account corresponds to the second group of oil or gas facilities, users of the fourth account being authorized to view reports of data from fluid handling devices at the second group of oil or gas facilities.

Dependent claims 2-23 depend from independent claim 1 and are allowable for the same reasons as described above.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher E. Everett whose telephone number is (571)272-

2851. The examiner can normally be reached on Monday through Friday from 8:00 am to 5:00 pm.

Examiner interviews are available via telephone, in-person, and video conferencing using a USPTO supplied web-based collaboration tool. To schedule an interview, applicant is encouraged to use the USPTO Automated Interview Request (AIR) at http://www.uspto.gov/interviewpractice.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kenneth Lo can be reached on 571-272-9774. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

Primary Examiner, Art Unit 2121

AMENDMENTS TO THE CLAIMS

The following is a complete listing of the claims, which replaces all previous versions and listings of the claims.

1. (currently amended) A hosted, web-based, remote industrial monitoring and control system for geographically distributed facilities in oil and gas fields, the system comprising:

a computer-implemented datastore storing:

a plurality of accounts, each account corresponding to an entity operating one or more geographically distributed oil or gas facilities, the accounts associating different oil or gas facilities with different entities; and

network addresses by which industrial monitoring or control equipment at the facilities is accessible via cellular network connections, the monitoring or control equipment including sensors or actuators;

a computer-implemented facility-interface module or modules configured to obtain data from the sensors at the facilities and send commands to the actuators at the facilities via the cellular network connections; and

a computer-implemented web-interface module or modules configured to send instructions to present control interfaces in web browsers executing on user computing devices logged in to the accounts and to receive commands to control actuators from the user computing devices,

wherein the system is configured to receive, with the web-interface module or modules, a user command to actuate an actuator entered via a presented control interface, identify a network address in the datastore corresponding to a facility at which the actuator is located, and send instructions with the facility-interface module or modules to the facility to actuate the actuator, and

wherein:

the plurality of accounts include a first account, a second account, a third

IPR2024-00739-U.S. Patent No. 9,898,014

account, and a fourth account;

the first account corresponds to a first group of oil or gas facilities, users of the first account being authorized to send commands to remotely control fluid handling devices at the first group of oil or gas facilities;

the second account corresponds to a second group of oil or gas facilities, the first group being different from the second group, users of the second account being authorized to send commands to remotely control fluid handling devices at the second group of oil or gas facilities;

the third account corresponds to the first group of oil or gas facilities, users of the third account being authorized to view reports of data from fluid handling devices at the first group of oil or gas facilities; and

the fourth account corresponds to the second group of oil or gas facilities, users of the fourth account being authorized to view reports of data from fluid handling devices at the second group of oil or gas facilities.

2. (currently amended) The system of claim 1, wherein the sensors include a tank level sensor of a tank at one of the facilities, and wherein the datastore includes a record associating the tank with the facility, data from the tank being unavailable to users without an account associated with the tank, and wherein the accounts:

designate oil or gas facilities to which a given user is authorized to send the user command to actuate the actuator~~;~~

~~include a first account corresponding to a first group of oil or gas facilities, users of the first account being authorized to send commands to remotely control fluid handling devices at the first group of oil or gas facilities; and~~

~~include a second account corresponding to a second group of oil or gas facilities, the first group being different from the second group, users of the second account being authorized to send commands to remotely control fluid handling devices at the second group of oil or gas facilities~~.

SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

3. (original) The system of claim 1, wherein the sensors include a level sensor of an oil/water separation tank at one of the facilities configured to indicate a level at which oil meets water, and wherein the datastore includes a record associating the tank with the facility.

4. (original) The system of claim 1, wherein the sensors include a leak detector at one of the facilities, and wherein the datastore includes a record associating the leak detector with the facility.

5. (original) The system of claim 1, wherein:

the web-interface module or modules comprises a web server; and

the facility-interface module or modules comprises a site server distinct from the web server.

6. (original) The system of claim 5, wherein:

the web server communicates with user devices via a first network port of a computing device executing the web server; and

the site server communicates with facilities via a second network port of the computing device, the second network port being different from the first network port.

7. (original) The system of claim 1, wherein:

the data store stores subscription information associated with at least some of the accounts.

8. (original) The system of claim 1, wherein the facility-interface module or modules comprise:

means for interfacing with a plurality of site controllers associated with the facilities.

The Integration Group of The Americas Ex. 1004-Page 69
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

9. (original) The system of claim 1, wherein the web-interface module or modules comprise:

means for sending instructions to present a control interface on the user devices.

10. (original) The system of claim 1, wherein the datastore stores accounts for more than one hundred facilities, and the web-interface module or modules are configured interface with more than one hundred user devices.

11. (original) The system of claim 1, wherein the facility-interface module or modules are configured to send pull requests to facilities to retrieve data buffered at the facilities.

12. (original) The system of claim 1, comprising:

a controller at one of the facilities communicatively coupled to an actuator or a sensor.

13. (previously presented) The system of claim 12, wherein the system is configured to instantiate at least four of the following as distinct threads from one another:

a thread configured to sends and receive data requests;

a thread configured to synchronize other threads with updated information;

a thread configured to set a target state of actuators;

a thread configured to obtain updated sensor readings;

a thread configured to process user interactions; and

a thread that eliminates other threads upon detecting a problem with the eliminated threads.

14. (previously presented) The system of claim 12, , wherein the system is configured to instantiate at least two of the following as distinct threads from one another:

a thread configured to sends or receive data request;

a thread configured to synchronize other threads with updated information;

The Integration Group of The Americas Ex. 1004-Page 70

a thread configured to set a target state of actuators;

a thread configured to obtain updated sensor readings;

a thread configured to process user interactions; and

a thread that eliminates other threads upon detecting a problem with the eliminated threads.

15. (original) The system of claim 12, wherein the controller is communicatively coupled to the actuator or sensor via a private local area network.

16. (original) The system of claim 12, wherein controller is communicatively coupled to the actuator or sensor via a frame-based carrier-sense multiple access protocol with collision detection.

17. (original) The system of claim 12, wherein controller is configured to periodically push buffered data to the facility-interface module or modules.

18. (original) The system of claim 12, comprising:

means for ensuring at least some data is not lost if network access ceases intermittently.

19. (original) The system of claim 12, comprising:

means for translating a command for an actuator from an input format to a format configured to effectuate changes in the actuator.

20. (original) The system of claim 19, comprising:

means for executing control routines implicated by translated commands on an individual actuator or sensor.

AFCP 2.0 Decision	Application No.	Applicant(s)
	14/984,422	PHILLIPS, AARON
	Examiner	Art Unit
	Christopher E. Everett	2121

This is in response to the After Final Consideration Pilot request filed 21 September 2017.

1. **Improper Request** – The AFCP 2.0 request is improper for the following reason(s) and the after final amendment submitted with the request will be treated under pre-pilot procedure.

   ☐ An AFCP 2.0 request form PTO/SB/434 (or equivalent document) was not submitted.

   ☐ A non-broadening amendment to at least one independent claim was not submitted.

   ☐ A proper AFCP 2.0 request was submitted in response to the most recent final rejection.

   ☐ Other:

2. **Proper Request**

   A. After final amendment submitted with the request will not be treated under AFCP 2.0.
   The after final amendment cannot be reviewed and a search conducted within the guidelines of the pilot program.

   ☐ The after final amendment will be treated under pre-pilot procedure.

   B. Updated search and/or completed additional consideration.
   The examiner performed an updated search and/or completed additional consideration of the after final amendment within the time authorized for the pilot program. The result(s) of the updated search and/or completed additional consideration are:

   ☒ 1. All of the rejections in the most recent final Office action are overcome and a Notice of Allowance is issued herewith.

   ☐ 2. The after final amendment would not overcome all of the rejections in the most recent final Office action. See attached interview summary for further details.

   ☐ 3. The after final amendment was reviewed, and it raises a new issue(s). See attached interview summary for further details.

   ☐ 4. The after final amendment raises new issues, but would overcome all of the rejections in the most recent final Office action. A decision on determining allowability could not be made within the guidelines of the pilot. See attached interview summary for further details, including any newly discovered prior art.

   ☐ 5. Other:

Examiner Note: Please attach an interview summary when necessary as described above.

Draft Claims to Discuss for U.S. Patent App. 14984422

1. (currently amended) A hosted, web-based, remote industrial monitoring and control system for geographically distributed facilities in oil and gas fields, the system comprising:

a computer-implemented datastore storing:

a plurality of accounts, each account corresponding to an entity operating one or more geographically distributed oil or gas facilities, the accounts associating different oil or gas facilities with different entities; and

network addresses by which industrial monitoring or control equipment at the facilities is accessible via cellular network connections, the monitoring or control equipment including sensors or actuators;

a computer-implemented facility-interface module or modules configured to obtain data from the sensors at the facilities and send commands to the actuators at the facilities via the cellular network connections; and

a computer-implemented web-interface module or modules configured to send instructions to present control interfaces in web browsers executing on user computing devices logged in to the accounts and to receive commands to control actuators from the user computing devices,

wherein the system is configured to receive, with the web-interface module or modules, a user command to actuate an actuator entered via a presented control interface, identify a network address in the datastore corresponding to a facility at which the actuator is located, and send instructions with the facility-interface module or modules to the facility to actuate the actuator, and

wherein:

the plurality of accounts include a first account, a second account, a third account, and a fourth account;

the first account corresponds to a first group of oil or gas facilities, users of the first account being authorized to send commands to remotely control fluid handling devices at the first group of oil or gas facilities;

the second account corresponds to a second group of oil or gas facilities, the first group being different from the second group, users of the second account being authorized to send commands to remotely control fluid handling devices at the second group of oil or gas facilities;

the third account corresponds to the first group of oil or gas facilities, users of the third account being authorized to view reports of data from fluid handling devices at the first group of oil or gas facilities; and

the fourth account corresponds to the second group of oil or gas facilities, users of the fourth account being authorized to view reports of data from fluid handling devices at the second group of oil or gas facilities.

2. (currently amended) The system of claim 1, wherein the sensors include a tank level sensor of a tank at one of the facilities, and wherein the datastore includes a record associating the tank with the facility, data from the tank being unavailable to users without an account associated with the tank, and wherein the accounts:

designate oil or gas facilities to which a given user is authorized to send the user command to actuate the actuator~~;~~

~~include a first account corresponding to a first group of oil or gas facilities, users of the first account being authorized to send commands to remotely control fluid handling devices at the first group of oil or gas facilities; and~~

~~include a second account corresponding to a second group of oil or gas facilities, the first group being different from the second group, users of the second account being authorized to send commands to remotely control fluid handling devices at the second group of oil or gas facilities~~.

3. (original) The system of claim 1, wherein the sensors include a level sensor of an oil/water separation tank at one of the facilities configured to indicate a level at which oil meets water, and wherein the datastore includes a record associating the tank with the facility.

4. (original) The system of claim 1, wherein the sensors include a leak detector at one of the facilities, and wherein the datastore includes a record associating the leak detector with the facility.

5. (original) The system of claim 1, wherein:

the web-interface module or modules comprises a web server; and

the facility-interface module or modules comprises a site server distinct from the web server.

6. (original) The system of claim 5, wherein:

the web server communicates with user devices via a first network port of a computing device executing the web server; and

the site server communicates with facilities via a second network port of the computing device, the second network port being different from the first network port.

7. (original) The system of claim 1, wherein:

the data store stores subscription information associated with at least some of the accounts.

8. (original) The system of claim 1, wherein the facility-interface module or modules comprise:

means for interfacing with a plurality of site controllers associated with the facilities.

9. (original) The system of claim 1, wherein the web-interface module or modules comprise:

means for sending instructions to present a control interface on the user devices.

10. (original) The system of claim 1, wherein the datastore stores accounts for more than one hundred facilities, and the web-interface module or modules are configured interface with more than one hundred user devices.

11. (original) The system of claim 1, wherein the facility-interface module or modules are configured to send pull requests to facilities to retrieve data buffered at the facilities.

12. (original) The system of claim 1, comprising:

a controller at one of the facilities communicatively coupled to an actuator or a sensor.

13. (previously presented) The system of claim 12, wherein the system is configured to instantiate at least four of the following as distinct threads from one another:

a thread configured to sends and receive data requests;

a thread configured to synchronize other threads with updated information;

a thread configured to set a target state of actuators;

a thread configured to obtain updated sensor readings;

a thread configured to process user interactions; and

a thread that eliminates other threads upon detecting a problem with the eliminated threads.

14. (previously presented) The system of claim 12, , wherein the system is configured to instantiate at least two of the following as distinct threads from one another:

a thread configured to sends or receive data request;

a thread configured to synchronize other threads with updated information;

a thread configured to set a target state of actuators;

a thread configured to obtain updated sensor readings;

a thread configured to process user interactions; and

a thread that eliminates other threads upon detecting a problem with the eliminated threads.

15. (original) The system of claim 12, wherein the controller is communicatively coupled to the actuator or sensor via a private local area network.

16. (original) The system of claim 12, wherein controller is communicatively coupled to the actuator or sensor via a frame-based carrier-sense multiple access protocol with collision detection.

17. (original) The system of claim 12, wherein controller is configured to periodically push buffered data to the facility-interface module or modules.

18. (original) The system of claim 12, comprising:

means for ensuring at least some data is not lost if network access ceases intermittently.

19. (original) The system of claim 12, comprising:

means for translating a command for an actuator from an input format to a format configured to effectuate changes in the actuator.

20. (original) The system of claim 19, comprising:

means for executing control routines implicated by translated commands on an individual actuator or sensor.

21. (original) The system of claim 12, comprising:

means for transmitting data to the facility-interface module or modules.

22. (original) The system of claim 12, comprising:

means for checking validity of a command.

23. (original) The system of claim 12, comprising:

an oil or gas facility communicatively coupled to the controller.

NOTIFICATION DATE	DELIVERY MODE
09/28/2017	ELECTRONIC

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

docket_ip@pillsburylaw.com

Applicant-Initiated Interview Summary	Application No.	Applicant(s)	
	14/984,422	PHILLIPS, AARON	
	Examiner	Art Unit	
	Christopher E. Everett	2121	

All participants (applicant, applicant's representative, PTO personnel):

(1) *Christopher E. Everett*. (3)_____.

(2) *Joshua Tucker, Reg. No. 63,809*. (4)_____.

Date of Interview: *20 September 2017*.

Type: ☒ Telephonic ☐ Video Conference
☐ Personal [copy given to: ☐ applicant ☐ applicant's representative]

Exhibit shown or demonstration conducted: ☐ Yes ☒ No.
If Yes, brief description: _____.

Issues Discussed ☐101 ☐112 ☐102 ☒103 ☐Others
(For each of the checked box(es) above, please describe below the issue and detailed description of the discussion)

Claim(s) discussed: *1*.

Identification of prior art discussed: *See Continuation Sheet*.

Substance of Interview
(For each issue discussed, provide a detailed description and indicate if agreement was reached. Some topics may include: identification or clarification of a reference or a portion thereof, claim interpretation, proposed amendments, arguments of any applied references etc...)

Applicant's representative, Josh Tucker, and Examiner Christopher E. Everett discussed the technology within the patent application including the plurality of accounts. Applicant's representative and Examiner discussed proposed amendments to claim 1 (see attached) with respect to the overview of the technology and the cited prior art (Dwinnell, Schultz, Huhn, Peters, and Hott). Examiner agreed that the proposed amendments to claim 1 would overcome the cited prior art (Dwinnell, Schultz, Huhn, Peters, and Hott). Applicant's representative and Examiner discussed the need for additional consideration and/or search in view of the proposed amendments to claim 1.

Applicant recordation instructions: The formal written reply to the last Office action must include the substance of the interview. (See MPEP section 713.04). If a reply to the last Office action has already been filed, applicant is given a non-extendable period of the longer of one month or thirty days from this interview date, or the mailing date of this interview summary form, whichever is later, to file a statement of the substance of the interview

Examiner recordation instructions: Examiners must summarize the substance of any interview of record. A complete and proper recordation of the substance of an interview should include the items listed in MPEP 713.04 for complete and proper recordation including the identification of the general thrust of each argument or issue discussed, a general indication of any other pertinent matters discussed regarding patentability and the general results or outcome of the interview, to include an indication as to whether or not agreement was reached on the issues raised.

☒ Attachment

/Christopher E. Everett/ Primary Examiner, Art Unit 2121	

The Integration Group of The Americas Ex. 1004-Page 84
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

Summary of Record of Interview Requirements

Manual of Patent Examining Procedure (MPEP), Section 713.04, Substance of Interview Must be Made of Record
A complete written statement as to the substance of any face-to-face, video conference, or telephone interview with regard to an application must be made of record in the application whether or not an agreement with the examiner was reached at the interview.

Title 37 Code of Federal Regulations (CFR) § 1.133 Interviews
Paragraph (b)

In every instance where reconsideration is requested in view of an interview with an examiner, a complete written statement of the reasons presented at the interview as warranting favorable action must be filed by the applicant. An interview does not remove the necessity for reply to Office action as specified in §§ 1.111, 1.135. (35 U.S.C. 132)

37 CFR §1.2 Business to be transacted in writing.
All business with the Patent or Trademark Office should be transacted in writing. The personal attendance of applicants or their attorneys or agents at the Patent and Trademark Office is unnecessary. The action of the Patent and Trademark Office will be based exclusively on the written record in the Office. No attention will be paid to any alleged oral promise, stipulation, or understanding in relation to which there is disagreement or doubt.

The action of the Patent and Trademark Office cannot be based exclusively on the written record in the Office if that record is itself incomplete through the failure to record the substance of interviews.

It is the responsibility of the applicant or the attorney or agent to make the substance of an interview of record in the application file, unless the examiner indicates he or she will do so. It is the examiner's responsibility to see that such a record is made and to correct material inaccuracies which bear directly on the question of patentability.

Examiners must complete an Interview Summary Form for each interview held where a matter of substance has been discussed during the interview by checking the appropriate boxes and filling in the blanks. Discussions regarding only procedural matters, directed solely to restriction requirements for which interview recordation is otherwise provided for in Section 812.01 of the Manual of Patent Examining Procedure, or pointing out typographical errors or unreadable script in Office actions or the like, are excluded from the interview recordation procedures below. Where the substance of an interview is completely recorded in an Examiners Amendment, no separate Interview Summary Record is required.

The Interview Summary Form shall be given an appropriate Paper No., placed in the right hand portion of the file, and listed on the "Contents" section of the file wrapper. In a personal interview, a duplicate of the Form is given to the applicant (or attorney or agent) at the conclusion of the interview. In the case of a telephone or video-conference interview, the copy is mailed to the applicant's correspondence address either with or prior to the next official communication. If additional correspondence from the examiner is not likely before an allowance or if other circumstances dictate, the Form should be mailed promptly after the interview rather than with the next official communication.

The Form provides for recordation of the following information:
- Application Number (Series Code and Serial Number)
- Name of applicant
- Name of examiner
- Date of interview
- Type of interview (telephonic, video-conference, or personal)
- Name of participant(s) (applicant, attorney or agent, examiner, other PTO personnel, etc.)
- An indication whether or not an exhibit was shown or a demonstration conducted
- An identification of the specific prior art discussed
- An indication whether an agreement was reached and if so, a description of the general nature of the agreement (may be by attachment of a copy of amendments or claims agreed as being allowable). Note: Agreement as to allowability is tentative and does not restrict further action by the examiner to the contrary.
- The signature of the examiner who conducted the interview (if Form is not an attachment to a signed Office action)

It is desirable that the examiner orally remind the applicant of his or her obligation to record the substance of the interview of each case. It should be noted, however, that the Interview Summary Form will not normally be considered a complete and proper recordation of the interview unless it includes, or is supplemented by the applicant or the examiner to include, all of the applicable items required below concerning the substance of the interview.

A complete and proper recordation of the substance of any interview should include at least the following applicable items:
1) A brief description of the nature of any exhibit shown or any demonstration conducted,
2) an identification of the claims discussed,
3) an identification of the specific prior art discussed,
4) an identification of the principal proposed amendments of a substantive nature discussed, unless these are already described on the Interview Summary Form completed by the Examiner,
5) a brief identification of the general thrust of the principal arguments presented to the examiner,
   (The identification of arguments need not be lengthy or elaborate. A verbatim or highly detailed description of the arguments is not required. The identification of the arguments is sufficient if the general nature or thrust of the principal arguments made to the examiner can be understood in the context of the application file. Of course, the applicant may desire to emphasize and fully describe those arguments which he or she feels were or might be persuasive to the examiner.)
6) a general indication of any other pertinent matters discussed, and
7) if appropriate, the general results or outcome of the interview unless already described in the Interview Summary Form completed by the examiner.

Examiners are expected to carefully review the applicant's record of the substance of an interview. If the record is not complete and accurate, the examiner will give the applicant an extendable one month time period to correct the record.

Examiner to Check for Accuracy

If the claims are allowable for other reasons of record, the examiner should send a letter setting forth the examiner's version of the statement attributed to him or her. If the record is complete and accurate, the examiner should place the indication, "Interview Record OK" on the paper recording the substance of the interview along with the date and the examiner's initials.

Continuation of Identification of prior art discussed: U.S. Patent Publication No. 2002/0161685 (Dwinnell), U.S. Patent Publication No. 2002/0018399 (Schultz), U.S. Patent Publication No. 2003/0052180 (Huhn), U.S. Patent No. 6,967,589 (Peters), and U.S. Patent No. 6,665,568 (Hott)..

Exhibit shown or demonstration conducted: ☐ Yes ☒ No.
If Yes, brief description: _____.

Issues Discussed ☐101 ☐112 ☐102 ☒103 ☐Others
(For each of the checked box(es) above, please describe below the issue and detailed description of the discussion)

Claim(s) discussed: *1 and 2*.

Identification of prior art discussed: *See Continuation Sheet*.

Substance of Interview
(For each issue discussed, provide a detailed description and indicate if agreement was reached. Some topics may include: identification or clarification of a reference or a portion thereof, claim interpretation, proposed amendments, arguments of any applied references etc...)

Applicant's representative, Josh Tucker, and Examiner Christopher E. Everett discussed the technology within the patent application including the plurality of accounts. Applicant's representative and Examiner discussed the difference between the prior art and the technology. In particular, Applicant's representative and Examiner discussed how the prior art was directed to granting access to data from every well to a user with a sufficiently high level of access (Dwinnell) and the technology utilizes various user accounts with different authorizations for site interactions (e.g., commands, reports) (paragraph 0019 of the specification of the present application). Applicant's representative and Examiner discussed claims 1-2 with respect to the overview of the technology and the cited prior art (Dwinnell, Schultz, Huhn, Peters, and Hott). No agreement was reached with respect to the claims. However, Examiner agreed to review proposed claim amendments before submission of the response to the Office Action.

Applicant recordation instructions: It is not necessary for applicant to provide a separate record of the substance of interview.

Examiner recordation instructions: Examiners must summarize the substance of any interview of record. A complete and proper recordation of the substance of an interview should include the items listed in MPEP 713.04 for complete and proper recordation including the identification of the general thrust of each argument or issue discussed, a general indication of any other pertinent matters discussed regarding patentability and the general results or outcome of the interview, to include an indication as to whether or not agreement was reached on the issues raised.

This collection of information is required by 37 CFR 1.16. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**
If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

REMARKS

Applicants respectfully assert the that the present amendments place the present application in condition for allowance.

Interview Summary

On 19 September 2017 and 20 September 2017, Examiner Everett and Applicant's representative, Josh Tucker, had a teleconference to discuss this case. The presently presented claim amendments were discussed and the parties agreed that the amendments would overcome the art of record but that an additional search would be required. Applicants thank the Examiner for his careful attention to this case and for the thorough Examination of this and its parent cases.

Reservation of Arguments

Above, Applicants identify reasons why the present rejections should not be applied to the pending claims. This explanation, however, should not be construed as an admission that other features of the claims beyond those discussed, including the combination of claim features, are taught or suggested by the cited art, or that the rejections are otherwise proper. In the interest of brevity, Applicants have refrained from providing an exhaustive explanation of every basis for allowing the claims. Accordingly, Applicants reserve the right to identify other grounds for overcoming the present rejections and the cited art, and Applicants reiterate that the amendments and arguments above are made without prejudice, including to rights available under the doctrine of equivalents.

The Integration Group of The Americas Ex. 1004-Page 93
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

Conclusion

Applicants respectfully submit that all pending claims should be in condition for allowance. However, if the Examiner believes certain amendments are necessary to clarify the present claims or if the Examiner wishes to resolve any other issues by way of a telephone conference, the Examiner is kindly invited to contact the undersigned attorney at the telephone number indicated below.

Respectfully submitted,

Date: 21 September 2017

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

AMENDMENTS TO THE CLAIMS

The following is a complete listing of the claims, which replaces all previous versions and listings of the claims.

1. (currently amended) A hosted, web-based, remote industrial monitoring and control system for geographically distributed facilities in oil and gas fields, the system comprising:

a computer-implemented datastore storing:

a plurality of accounts, each account corresponding to an entity operating one or more geographically distributed oil or gas facilities, the accounts associating different oil or gas facilities with different entities; and

network addresses by which industrial monitoring or control equipment at the facilities is accessible via cellular network connections, the monitoring or control equipment including sensors or actuators;

a computer-implemented facility-interface module or modules configured to obtain data from the sensors at the facilities and send commands to the actuators at the facilities via the cellular network connections; and

a computer-implemented web-interface module or modules configured to send instructions to present control interfaces in web browsers executing on user computing devices logged in to the accounts and to receive commands to control actuators from the user computing devices,

wherein the system is configured to receive, with the web-interface module or modules, a user command to actuate an actuator entered via a presented control interface, identify a network address in the datastore corresponding to a facility at which the actuator is located, and send instructions with the facility-interface module or modules to the facility to actuate the actuator, and

wherein:

the plurality of accounts include a first account, a second account, a third

The Integration Group of The Americas Ex. 1004-Page 98

IPR2024-00739-U.S. Patent No. 9,898,014

account, and a fourth account;

the first account corresponds to a first group of oil or gas facilities, users of the first account being authorized to send commands to remotely control fluid handling devices at the first group of oil or gas facilities;

the second account corresponds to a second group of oil or gas facilities, the first group being different from the second group, users of the second account being authorized to send commands to remotely control fluid handling devices at the second group of oil or gas facilities;

the third account corresponds to the first group of oil or gas facilities, users of the third account being authorized to view reports of data from fluid handling devices at the first group of oil or gas facilities; and

the fourth account corresponds to the second group of oil or gas facilities, users of the fourth account being authorized to view reports of data from fluid handling devices at the second group of oil or gas facilities.

2. (currently amended) The system of claim 1, wherein the sensors include a tank level sensor of a tank at one of the facilities, and wherein the datastore includes a record associating the tank with the facility, data from the tank being unavailable to users without an account associated with the tank, and wherein the accounts:

designate oil or gas facilities to which a given user is authorized to send the user command to actuate the actuator~~;~~

~~include a first account corresponding to a first group of oil or gas facilities, users of the first account being authorized to send commands to remotely control fluid handling devices at the first group of oil or gas facilities; and~~

~~include a second account corresponding to a second group of oil or gas facilities, the first group being different from the second group, users of the second account being authorized to send commands to remotely control fluid handling devices at the second group of oil or gas facilities~~.

SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

3. (original) The system of claim 1, wherein the sensors include a level sensor of an oil/water separation tank at one of the facilities configured to indicate a level at which oil meets water, and wherein the datastore includes a record associating the tank with the facility.

4. (original) The system of claim 1, wherein the sensors include a leak detector at one of the facilities, and wherein the datastore includes a record associating the leak detector with the facility.

5. (original) The system of claim 1, wherein:

the web-interface module or modules comprises a web server; and

the facility-interface module or modules comprises a site server distinct from the web server.

6. (original) The system of claim 5, wherein:

the web server communicates with user devices via a first network port of a computing device executing the web server; and

the site server communicates with facilities via a second network port of the computing device, the second network port being different from the first network port.

7. (original) The system of claim 1, wherein:

the data store stores subscription information associated with at least some of the accounts.

8. (original) The system of claim 1, wherein the facility-interface module or modules comprise:

means for interfacing with a plurality of site controllers associated with the facilities.

The Integration Group of The Americas Ex. 1004-Page 100
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

9. (original) The system of claim 1, wherein the web-interface module or modules comprise:

means for sending instructions to present a control interface on the user devices.

10. (original) The system of claim 1, wherein the datastore stores accounts for more than one hundred facilities, and the web-interface module or modules are configured interface with more than one hundred user devices.

11. (original) The system of claim 1, wherein the facility-interface module or modules are configured to send pull requests to facilities to retrieve data buffered at the facilities.

12. (original) The system of claim 1, comprising:

a controller at one of the facilities communicatively coupled to an actuator or a sensor.

13. (previously presented) The system of claim 12, wherein the system is configured to instantiate at least four of the following as distinct threads from one another:

a thread configured to sends and receive data requests;

a thread configured to synchronize other threads with updated information;

a thread configured to set a target state of actuators;

a thread configured to obtain updated sensor readings;

a thread configured to process user interactions; and

a thread that eliminates other threads upon detecting a problem with the eliminated threads.

14. (previously presented) The system of claim 12, , wherein the system is configured to instantiate at least two of the following as distinct threads from one another:

a thread configured to sends or receive data request;

a thread configured to synchronize other threads with updated information;

a thread configured to set a target state of actuators;

a thread configured to obtain updated sensor readings;

a thread configured to process user interactions; and

a thread that eliminates other threads upon detecting a problem with the eliminated threads.

15. (original) The system of claim 12, wherein the controller is communicatively coupled to the actuator or sensor via a private local area network.

16. (original) The system of claim 12, wherein controller is communicatively coupled to the actuator or sensor via a frame-based carrier-sense multiple access protocol with collision detection.

17. (original) The system of claim 12, wherein controller is configured to periodically push buffered data to the facility-interface module or modules.

18. (original) The system of claim 12, comprising:

means for ensuring at least some data is not lost if network access ceases intermittently.

19. (original) The system of claim 12, comprising:

means for translating a command for an actuator from an input format to a format configured to effectuate changes in the actuator.

20. (original) The system of claim 19, comprising:

means for executing control routines implicated by translated commands on an individual actuator or sensor.

AMENDMENT AND RESPONSE
TO FINAL OFFICE ACTION ISSUED ON 31 MARCH 2017

In response to the above-noted office action, Applicants amend and remark as follows.

Authorization for Extensions of Time and Payment of Fees

In accordance with 37 C.F.R. § 1.136, Applicants hereby provide a general authorization to treat this and any future reply requiring an extension of time as incorporating a request thereof. The Commissioner is authorized to charge any additional fees that may be required to Deposit Account No. 033975, referencing the above attorney docket number.

Doc Code: A.NE.AFCP
Document Description: After Final Consideration Pilot Program Request

PTO/SB/434 (05-13)

CERTIFICATION AND REQUEST FOR CONSIDERATION UNDER THE AFTER FINAL CONSIDERATION PILOT PROGRAM 2.0

Practitioner Docket No.:	Application No.:	Filing Date:
034392-0444743	14/984,422	December 30, 2015
First Named Inventor:	**Title:**	
Aaron Phillips	REMOTE CONTROL OF FLUID-HANDLING DEVICES	

APPLICANT HEREBY CERTIFIES THE FOLLOWING AND REQUESTS CONSIDERATION UNDER THE AFTER FINAL CONSIDERATION PILOT PROGRAM 2.0 (AFCP 2.0) OF THE ACCOMPANYING RESPONSE UNDER 37 CFR 1.116.

1. The above-identified application is (i) an original utility, plant, or design nonprovisional application filed under 35 U.S.C. 111(a) [a continuing application (*e.g.*, a continuation or divisional application) is filed under 35 U.S.C. 111(a) and is eligible under (i)], or (ii) an international application that has entered the national stage in compliance with 35 U.S.C. 371(c).
2. The above-identified application contains an outstanding final rejection.
3. Submitted herewith is a response under 37 CFR 1.116 to the outstanding final rejection. The response includes an amendment to at least one independent claim, and the amendment does not broaden the scope of the independent claim in any aspect.
4. This certification and request for consideration under AFCP 2.0 is the only AFCP 2.0 certification and request filed in response to the outstanding final rejection.
5. Applicant is willing and available to participate in any interview requested by the examiner concerning the present response.
6. This certification and request is being filed electronically using the Office's electronic filing system (EFS-Web).
7. Any fees that would be necessary consistent with current practice concerning responses after final rejection under 37 CFR 1.116, *e.g.*, extension of time fees, are being concurrently filed herewith. [There is no additional fee required to request consideration under AFCP 2.0.]
8. By filing this certification and request, applicant acknowledges the following:
    - Reissue applications and reexamination proceedings are not eligible to participate in AFCP 2.0.
    - The examiner will verify that the AFCP 2.0 submission is compliant, *i.e.*, that the requirements of the program have been met (see items 1 to 7 above). For compliant submissions:
        - The examiner will review the response under 37 CFR 1.116 to determine if additional search and/or consideration (i) is necessitated by the amendment and (ii) could be completed within the time allotted under AFCP 2.0. If additional search and/or consideration is required but cannot be completed within the allotted time, the examiner will process the submission consistent with current practice concerning responses after final rejection under 37 CFR 1.116, *e.g.*, by mailing an advisory action.
        - If the examiner determines that the amendment does not necessitate additional search and/or consideration, or if the examiner determines that additional search and/or consideration is required and could be completed within the allotted time, then the examiner will consider whether the amendment places the application in condition for allowance (after completing the additional search and/or consideration, if required). If the examiner determines that the amendment does not place the application in condition for allowance, then the examiner will contact the applicant and request an interview.
            - The interview will be conducted by the examiner, and if the examiner does not have negotiation authority, a primary examiner and/or supervisory patent examiner will also participate.
            - If the applicant declines the interview, or if the interview cannot be scheduled within ten (10) calendar days from the date that the examiner first contacts the applicant, then the examiner will proceed consistent with current practice concerning responses after final rejection under 37 CFR 1.116.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

PETITION FOR EXTENSION OF TIME UNDER 37 CFR 1.136(a)

Docket Number (Optional): 034392-0444743

Application Number: 14/984,422

Filed: December 30, 2015

For: REMOTE CONTROL OF FLUID-HANDLING DEVICES

Art Unit: 2121

Examiner: Everett, Christopher E

This is a request under the provisions of 37 CFR 1.136(a) to extend the period for filing a reply in the above-identified application.

The requested extension and fee are as follows (check time period desired and enter the appropriate fee below):

		Fee	Small Entity Fee	Micro Entity Fee	
☑	One month (37 CFR 1.17(a)(1))	$200	$100	$50	$ 100
☐	Two months (37 CFR 1.17(a)(2))	$600	$300	$150	$
☐	Three months (37 CFR 1.17(a)(3))	$1,400	$700	$350	$
☐	Four months (37 CFR 1.17(a)(4))	$2,200	$1,100	$550	$
☐	Five months (37 CFR 1.17(a)(5))	$3,000	$1,500	$750	$

☐ Applicant asserts small entity status. See 37 CFR 1.27.

☐ Applicant certifies micro entity status. See 37 CFR 1.29.
Form PTO/SB/15A or B or equivalent must either be enclosed or have been submitted previously.

☐ A check in the amount of the fee is enclosed.

☐ Payment by credit card. Form PTO-2038 is attached.

☐ The Director has already been authorized to charge fees in this application to a Deposit Account.

☑ The Director is hereby authorized to charge any fees which may be required, or credit any overpayment, to Deposit Account Number 033975.

☑ Payment made via EFS-Web.

WARNING: Information on this form may become public. Credit card information should not be included on this form. Provide credit card information and authorization on PTO-2038.

I am the

☐ applicant.

☑ attorney or agent of record. Registration number 63809.

☐ attorney or agent acting under 37 CFR 1.34. Registration number _____.

NOTE: This form must be signed in accordance with 37 CFR 1.33. See 37 CFR 1.4 for signature requirements and certifications. Submit multiple forms if more than one signature is required, see below*.

☐ * Total of _____ forms are submitted.

This collection of information is required by 37 CFR 1.136(a). The information is required to obtain or retain a benefit by the public, which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 6 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Mail Stop PCT, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Electronic Patent Application Fee Transmittal

Application Number:	14984422
Filing Date:	30-Dec-2015
Title of Invention:	REMOTE CONTROL OF FLUID-HANDLING DEVICES
First Named Inventor/Applicant Name:	Aaron Phillips
Filer:	Joshua L. Tucker/Kathryn Seeman
Attorney Docket Number:	034392-0444743

Filed as Small Entity

NOTICE OF APPEAL FROM THE EXAMINER TO THE PATENT TRIAL AND APPEAL BOARD

Docket Number (Optional): 034392-0444743

I hereby certify that this correspondence is being facsimile transmitted to the USPTO, EFS-Web transmitted to the USPTO, or deposited with the United States Postal Service with sufficient postage in an envelope addressed to "Commissioner for Patents, P.O. Box 1450, Alexandria, on Alexandria, VA 22313-1450" [37 CFR 1.8(a)] on July 28, 2017.

Signature /Joshua Tucker/

Typed or printed name Joshua Tucker

In re Application of: Aaron Phillips

Application Number	Filed
14/984,422	December 30, 2015

For: REMOTE CONTROL OF FLUID-HANDLING DEVICES

Art Unit	Examiner
2121	Everett, Christopher E

Applicant hereby **appeals** to the Patent Trial and Appeal Board from the last decision of the examiner.

The fee for this Notice of Appeal is (37 CFR 41.20(b)(1)) $ 800

☑ Applicant asserts small entity status. See 37 CFR 1.27. Therefore, the fee shown above is reduced by 50%, and the resulting fee is: $ 400

☐ Applicant certifies micro entity status. See 37 CFR 1.29. Therefore, the fee shown above is reduced by 75%, and the resulting fee is: $ _____
Form PTO/SB/15A or B or equivalent must either be enclosed or have been submitted previously.

☐ A check in the amount of the fee is enclosed.

☐ Payment by credit card. Form PTO-2038 is attached.

☑ The Director is hereby authorized to charge any fees which may be required, or credit any overpayment to Deposit Account No. 033975.

☑ Payment made via EFS-Web.

☑ A petition for an extension of time under 37 CFR 1.136(a) (PTO/AIA/22 or equivalent) is enclosed.
For extensions of time in reexamination proceedings, see 37 CFR 1.550.

WARNING: Information on this form may become public. Credit card information should not be included on this form. Provide credit card information and authorization on PTO-2038.

I am the

☐ applicant

☑ attorney or agent of record
Registration number 63809

☐ attorney or agent acting under 37 CFR 1.34
Registration number _____

Signature /Joshua Tucker/

Typed or printed name Joshua Tucker

Telephone Number 512-580-9628

Date July 28, 2017

NOTE: This form must be signed in accordance with 37 CFR 1.33. See 37 CFR 1.4 for signature requirements and certifications. Submit multiple forms if more than one signature is required, see below*.

☐ * Total of _____ forms are submitted.

This collection of information is required by 37 CFR 41.20(b)(1) and 41.31. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11, 1.14 and 41.6. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

docket_ip@pillsburylaw.com

Office Action Summary	Application No. 14/984,422	Applicant(s) PHILLIPS, AARON	
	Examiner Christopher E. Everett	Art Unit 2121	AIA (First Inventor to File) Status No

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE *3* MONTHS FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1)☒ Responsive to communication(s) filed on *3/21/2017*.

☐ A declaration(s)/affidavit(s) under **37 CFR 1.130(b)** was/were filed on _____.

2a)☒ This action is **FINAL**. 2b)☐ This action is non-final.

3)☐ An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.

4)☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims*

5)☒ Claim(s) *1-23* is/are pending in the application.

5a) Of the above claim(s) _____ is/are withdrawn from consideration.

6)☐ Claim(s) _____ is/are allowed.

7)☒ Claim(s) *1-23* is/are rejected.

8)☐ Claim(s) _____ is/are objected to.

9)☐ Claim(s) _____ are subject to restriction and/or election requirement.

* If any claims have been determined allowable, you may be eligible to benefit from the **Patent Prosecution Highway** program at a participating intellectual property office for the corresponding application. For more information, please see http://www.uspto.gov/patents/init_events/pph/index.jsp or send an inquiry to PPHfeedback@uspto.gov.

Application Papers

10)☐ The specification is objected to by the Examiner.

11)☒ The drawing(s) filed on *12/30/2015* is/are: a)☒ accepted or b)☐ objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

Priority under 35 U.S.C. § 119

12)☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

Certified copies:

a)☐ All b)☐ Some** c)☐ None of the:

1.☐ Certified copies of the priority documents have been received.

2.☐ Certified copies of the priority documents have been received in Application No. _____.

3.☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

** See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) ☒ Notice of References Cited (PTO-892)

2) ☐ Information Disclosure Statement(s) (PTO/SB/08a and/or PTO/SB/08b) Paper No(s)/Mail Date _____.

3) ☐ Interview Summary (PTO-413) Paper No(s)/Mail Date. _____ .

4) ☐ Other: _____.

The Integration Group of The American Inns of Court Page 171
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

DETAILED ACTION

1. The present application is being examined under the pre-AIA first to invent provisions.

2. The Office Action is responsive to the communication filed on 3/21/2017.

3. Claims 1-23 are pending.

Response to Amendment

4. The amendment, filed 3/21/2017, is fully responsive.

5. The claim objections to claims 13-14 have been corrected and the objections have been removed.

Response to Arguments

6. Applicant's arguments with respect to claim 2 have been considered but are moot because the arguments do not apply to any of the references being used in the current rejection. In particular, Applicant's arguments are directed to Dwinnell, Schultz, Huhn, and Peters not teaching or suggesting "designate oil or gas facilities to which a given user is authorized to send the user command to actuate the actuator," as recited in claim 2. In the current rejection, Hott is utilized to teach this claim limitation with respect to the authorized user.

7. Applicant's arguments filed 3/21/2017 have been fully considered but they are not persuasive.

Regarding claims 1-23, the applicant argues that the cited references do not teach or suggest the claim limitations with respect to independent claim 1 below. Dependent claims 2-23 depend, directly or indirectly, from independent claim 1. The Examiner respectfully disagrees. The cited prior art describe the claim limitations as briefly outlined below and as described in the rejection of claim 1 below.

- "a plurality of accounts, each account corresponding to an entity operating one or more geographically distributed oil or gas facilities, the accounts associating different oil or gas facilities with different entities; and" (see, e.g., Dwinnell: see the accounts and the **various ventures and wells** as described in paragraphs 0057, 0067, 0068 and as illustrated in figures 6A, 6B; "Retrieval by web site users (investors and managers) of information and data stored in the archive system 302 or the database system 303 is controlled by standard authentication and authorization protocols. Users sign up for access to certain restricted features of the dynamic web site and receive a username and password to access desired information. Once a user has received an **account**, he is able to login into various otherwise-restricted web pages and thus be presented with a dynamically generated web page representative of the **level of access that the user's particular account possesses**." Paragraph 0057 (emphasis added))

Accordingly, applicant's arguments are not persuasive since the cited prior art describe the limitations in these claims.

In response to applicant's argument that Hugh is nonanalogous art, it has been held that a prior art reference must either be in the field of applicant's endeavor or, if not, then be reasonably pertinent to the particular problem with which the applicant was concerned, in order to be relied upon as a basis for rejection of the claimed invention. See *In re Oetiker*, 977 F.2d 1443, 24 USPQ2d 1443 (Fed. Cir. 1992). In this case, Huhn is directed to using addresses to control actuators in a process control system ("A method and apparatus are provided for establishing an actuator address in a system (20) having plural actuators (50-54). A look-up table (122) stores all desired addresses corresponding to the plural actuators. An actuator of the plural actuators is actuated (310, 318) and at least one operating parameter (316, 324, 326) is determined. An address from the stored desired addresses is selected (328) from the look-up table of all addresses of the mounted actuator in response to the at least one operating parameter (316, 324, 326)." Abstract), Dwinnell is directed to a web based interface for oil and gas drilling location information, and Schultz is directed to a web server based interface for oil well information and control. These three references, Huhn, Dwinnell, and Schultz, are all directed to the same field of applicant's endeavor – a type of process control. Furthermore, the three references, Huhn, Dwinnell, and Schultz are also directed to the same problem – how to obtain information from and control process control systems. Accordingly, applicant's arguments are not persuasive since the cited prior art is directed to the same field of endeavor and to the same problem.

For at least these reasons, the rejection of the claims is maintained.

Claim Rejections - 35 USC § 103

8. In the event the determination of the status of the application as subject to AIA 35 U.S.C. 102 and 103 (or as subject to pre-AIA 35 U.S.C. 102 and 103) is incorrect, any correction of the statutory basis for the rejection will not be considered a new ground of rejection if the prior art relied upon, and the rationale supporting the rejection, would be the same under either status.

9. The following is a quotation of pre-AIA 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

> (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

10. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under pre-AIA 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.

2. Ascertaining the differences between the prior art and the claims at issue.

3. Resolving the level of ordinary skill in the pertinent art.

4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

11. Claims 1, 5, 7-10, 12, 18-21, and 23 are rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Publication No. 2002/0161685 (Dwinnell) in view of U.S. Patent Publication No. 2002/0018399 (Schultz) and further in view of U.S. Patent Publication No. 2003/0052180 (Huhn).

Claim 1:

Dwinnell describes a hosted, web-based, remote industrial monitoring and control system for geographically distributed facilities in oil and gas fields, the system comprising: **(Dwinnell: "Embodiments of the present invention as disclosed collect live productivity data and streaming media information broadcast from remote sites of interest (such as oil and gas drilling locations, construction sites, etc.) in real-time into a collection and distribution network that delivers this data and information to investors and managers via the Internet via a dynamic web page interface." abstract)**

- a computer-implemented datastore storing: **(Dwinnell: see the database system 303 of the central system 102 as illustrated in figure 3 and as described in paragraph 0057)**
    - a plurality of accounts, each account corresponding to an entity operating one or more geographically distributed oil or gas facilities, the accounts associating different oil or gas facilities with different entities; and **(Dwinnell: see the accounts and the various ventures and wells as described in paragraphs 0057, 0067, 0068 and as illustrated in figures 6A, 6B; "Retrieval by web site**

users (investors and managers) of information and data stored in the archive system 302 or the database system 303 is controlled by standard authentication and authorization protocols. Users sign up for access to certain restricted features of the dynamic web site and receive a username and password to access desired information. Once a user has received an account, he is able to login into various otherwise-restricted web pages and thus be presented with a dynamically generated web page representative of the level of access that the user's particular account possesses." Paragraph 0057)

- a computer-implemented facility-interface module or modules configured to **(Dwinnell: see the central collection and distribution system 102 as illustrated in figures 1, 3 and as described in paragraph 0031)**
    - obtain data from the sensors at the facilities and **(Dwinnell: "Each remote site system 101 gathers information and data from a particular remote site (i.e., an oil and gas drilling site or rig) and transmits the information and data to a central collection and distribution system 102 at least partially in the form of streaming media, and preferably digital streaming video." Paragraph 0031)**
- a computer-implemented web-interface module or modules configured to **(Dwinnell: see the web platform system 305 of the central system 102 as illustrated in figure 3 and as described in paragraphs 0051, 0054)**
    - send instructions to present control interfaces in web browsers executing on user computing devices logged in to the accounts and to **(Dwinnell: see the**

interfaces in web browsers along with delivered data from the web-server to the web browser as illustrated in figures 4, 5, 6A, 6B and as described in paragraphs 0063, 0064, 0065, 0066)

Dwinnell does not explicitly describe sending commands as described below. However, Schultz teaches the sending commands as described below.

- send commands to the actuators at the facilities via the cellular network connections; and **(see the sending of commands to actuators in Schultz and the use of a cellular network in Dwinnell; Schultz: "In addition, a corresponding one of the actuators 88, 90, 92 may be controlled via the respective web page to operate the associated device 80 or 82. Thus, in the system 68, a person with a connection to the Internet 102 at a remote location may, for example, monitor a pressure drop across or a flow rate through the device 80 and, based on this information, operate the actuator 88 to adjust the pressure drop or flow rate, or to close the device, as desired." Paragraph 0048; Dwinnell: "The remote site system 101 further includes a remote site transmission device 203 for connecting to and sending streaming media information and other data to the central system 102. Preferably, the transmission device 203 should be capable of 64 Kb/s or greater telecommunication bandwidth and can comprise a cellular or land-line high speed modem, microwave, ADSL, ISDN line, LAN/WAN, etc., and most**

preferably comprises a portable VSAT satellite receiver/transmitter and antenna." Paragraph 0044))

- receive commands to control actuators from the user computing devices, **(Schultz: "In addition, a corresponding one of the actuators 88, 90, 92 may be controlled via the respective web page to operate the associated device 80 or 82. Thus, in the system 68, a person with a connection to the Internet 102 at a remote location may, for example, monitor a pressure drop across or a flow rate through the device 80 and, based on this information, operate the actuator 88 to adjust the pressure drop or flow rate, or to close the device, as desired." Paragraph 0048)**

- wherein the system is configured to
  - receive, with the web-interface module or modules, a user command to actuate an actuator entered via a presented control interface, **(Schultz: "In addition, a corresponding one of the actuators 88, 90, 92 may be controlled via the respective web page to operate the associated device 80 or 82. Thus, in the system 68, a person with a connection to the Internet 102 at a remote location may, for example, monitor a pressure drop across or a flow rate through the device 80 and, based on this information, operate the actuator 88 to adjust the pressure drop or flow rate, or to close the device, as desired." Paragraph 0048)**
  - send instructions with the facility-interface module or modules to the facility to actuate the actuator. **(Schultz: "In addition, a corresponding one of the**

actuators 88, 90, 92 may be controlled via the respective web page to operate the associated device 80 or 82. Thus, in the system 68, a person with a connection to the Internet 102 at a remote location may, for example, monitor a pressure drop across or a flow rate through the device 80 and, based on this information, operate the actuator 88 to adjust the pressure drop or flow rate, or to close the device, as desired." Paragraph 0048)

One of ordinary skill in the art would have recognized that applying the known technique of Dwinnell, namely, a web based interface for oil and gas drilling location information, with the known techniques of Schultz, namely, a web server based interface for oil well information and control, would have yielded predictable results and resulted in an improved system. Accordingly, applying the teachings of Dwinnell to provide a web interface for remote viewing of information about oil wells with the teachings of Schultz to use a web interface to view information and control devices in oil wells would have been recognized by those of ordinary skill in the art as resulting in an improved monitoring and control system (i.e., remote monitoring and control of oil wells of Dwinnell based on the teachings of remote control of oil wells in Schultz).

Dwinnell and Schultz do not explicitly describe network addresses as described below. However, Huhn teaches the network addresses as described below.

- network addresses by which industrial monitoring or control equipment at the facilities is accessible via cellular network connections, the monitoring or control equipment including sensors or actuators; **(see the stored network addresses for**

actuators in Huhn and the cell network communication in Dwinnell; Huhn: see the store address to eeprom 330 as illustrated in figure 9; "In accordance with a preferred embodiment of the present invention, the address for an actuator is stored in the EEPROM 130. As mentioned, each of the actuators of the system are identical." Paragraph 0042; Dwinnell: "The remote site system 101 further includes a remote site transmission device 203 for connecting to and sending streaming media information and other data to the central system 102. Preferably, the transmission device 203 should be capable of 64 Kb/s or greater telecommunication bandwidth and can comprise a cellular or land-line high speed modem, microwave, ADSL, ISDN line, LAN/WAN, etc., and most preferably comprises a portable VSAT satellite receiver/transmitter and antenna." Paragraph 0044)

- identify a network address in the datastore corresponding to a facility at which the actuator is located, and **(Huhn: see the find address in look-up table 328 as illustrated in figure 9; "An address from the stored desired addresses is selected (328) from the look-up table of all addresses of the mounted actuator in response to the at least one operating parameter (316, 324, 326)." Abstract; "Each of the actuators 50-54 have an associated address. When the HVAC controller 30 wants to command one of the actuators to move that actuator's associated conduit door, it transmits a two part serial communication signal on the command line 64 connected to all actuators. The first part of the serial communication is an actuator address for that**

actuator to be commanded. The second part of the serial communication is the command to further open or further close the conduit door. All other actuators ignore the command when the address portion of the serial communication does not match its stored address." Paragraph 0041)

One of ordinary skill in the art would have recognized that applying the known technique of Dwinnell, namely, a web based interface for oil and gas drilling location information, and the known techniques of Schultz, namely, a web server based interface for oil well information and control, with the teachings of Huhn, namely, using addresses to control actuators in a process control system, would have yielded predictable results and resulted in an improved system. Accordingly, applying the teachings of Dwinnell to provide a web interface for remote viewing of information about oil wells and the teachings of Schultz to use a web interface to view information and control devices in oil wells with the teachings of Huhn to control actuators using addresses would have been recognized by those of ordinary skill in the art as resulting in an improved monitoring and control system (i.e., remote monitoring and control of oil wells using actuator addressing of Dwinnell based on the teachings of remote control of oil wells in Schultz and the teachings of controlling actuators using addressing in Huhn).

Claim 5:

Dwinnell describes the system of claim 1, wherein:

- the web-interface module or modules comprises a web server; and **(Dwinnell: "The web platform system 305, comprising one or more web servers, communicates directly with each user's computer (running a web browser application) via the Internet and**

retrieves and serves, in a suitable hardware independent page description language (such as HTML, XML, and java), requested data from the database system 303, live streaming broadcasts and associated data from the broadcast system 304, and archived streams and associated data from the archive system 302." Paragraph 0054; see the web platform system 305 of the central system 102 as illustrated in figure 3 and as described in paragraphs 0051, 0054)

- the facility-interface module or modules comprises a site server distinct from the web server. **(Dwinnell: "Incoming streamed media is received by the central system transmission device 103 and sent directly to the collection system 301 where it is identified." Paragraph 0052; "Each of the systems 301-305 that comprise the central system 102 are composed of suitable servers, storage devices (including databases), memory devices and support hardware as is known in the art of computer networks to achieve the functions of each system 301-305." Paragraph 0051)**

Claim 7:

Dwinnell describes the system of claim 1, wherein: the data store stores subscription information associated with at least some of the accounts. **(Dwinnell: see the accounts and the various ventures and wells as described in paragraphs 0057, 0067, 0068 and as illustrated in figures 6A, 6B; "Retrieval by web site users (investors and managers) of information and data stored in the archive system 302 or the database system 303 is controlled by standard authentication and authorization protocols. Users sign up for access to certain restricted features of the dynamic web site and receive a username and password to access desired**

information. Once a user has received an account, he is able to login into various otherwise-restricted web pages and thus be presented with a dynamically generated web page representative of the level of access that the user's particular account possesses." Paragraph 0057)

Claim 8:

Dwinnell describes the system of claim 1, wherein the facility-interface module or modules comprise: means for interfacing with a plurality of site controllers associated with the facilities. **(Dwinnell: see the central system transmission device 103 interfacing with the remote site systems 101 as illustrated in figure 1 and as described in paragraph 0034; "First, a continuous stream is sent from each remote site system 101 to the central collection and distribution system 102 via the central system transmission device 103 (such as a high speed modem, LAN, WAN or VSAT satellite transmitter/receiver)." Paragraph 0034)**

Claim 9:

Dwinnell describes the system of claim 1, wherein the web-interface module or modules comprise: means for sending instructions to present a control interface on the user devices. **(Dwinnell: see the interfaces in web browsers along with delivered data from the web-server to the web browser as illustrated in figures 4, 5, 6A, 6B and as described in paragraphs 0063, 0064, 0065, 0066)**

Claim 10:

Dwinnell describes the system of claim 1,

- wherein the datastore stores accounts for more than one hundred facilities, and **(Dwinnell: "As is apparent from FIG. 1, the network 100 can be expanded or contracted to include any number of remote site systems 101 or investors/managers 105 as is necessitated." Paragraph 0031)**
- the web-interface module or modules are configured interface with more than one hundred user devices. **(Dwinnell: "As is apparent from FIG. 1, the network 100 can be expanded or contracted to include any number of remote site systems 101 or investors/managers 105 as is necessitated." Paragraph 0031)**

Claim 12:

Dwinnell describes the system of claim 1, comprising: a controller at one of the facilities communicatively coupled to an actuator or a sensor. **(Dwinnell: "The remote site system 101 comprises a remote site video and data capture server 202 (hereinafter referred to as a remote site capture server 202 or "RSCS 202") in electronic communication with a plurality of cameras 205 positioned strategically about the remote site." Paragraph 0039)**

Claim 18:

Dwinnell describes the system of claim 12, comprising: means for ensuring at least some data is not lost if network access ceases intermittently. **(Dwinnell: "Preferably, the remote site system 101 also includes a storage medium (not explicitly shown in FIG. 2) for archiving a**

local copy of said collected data and streams such that such information and data will not be permanently lost in the case oc communication problems with the central system 100." Paragraph 0044)

Claim 19:

Dwinnell does not explicitly describe translating a command as described below. However, Schultz teaches the translating a command as described below.

Dwinnell and Schultz describe the system of claim 12, comprising: means for translating a command for an actuator from an input format to a format configured to effectuate changes in the actuator. **(Schultz: see the converter 26 converting optical signals into electrical signals for control of an actuator as illustrated in figures 1, 2 and as described in paragraphs 0032, 0042; "Accordingly, the well tool 10 includes a converter 26 for converting electrical signals generated by the webserver 22 into optical signals for transmission via the fiber optic line(s) of the cable 24." Paragraph 0032; "In a described embodiment, a well tool includes a webserver connected to a sensor and an actuator of the tool." Abstract; "The actuators 88, 90, 92 maybe electrically, hydraulically or otherwise operated." Paragraph 0042)**

Dwinnell and Schultz are combinable for the same rationale as set forth above with respect to claim 1.

Claim 20:

Dwinnell does not explicitly describe executing control routines as described below. However, Schultz teaches the executing control routines as described below.

Dwinnell and Schultz describe the system of claim 19, comprising: means for executing control routines implicated by translated commands on an individual actuator or sensor. **(Schultz: see the converter 26 converting optical signals into electrical signals for control of an actuator as illustrated in figures 1, 2 and as described in paragraphs 0032, 0042; "Accordingly, the well tool 10 includes a converter 26 for converting electrical signals generated by the webserver 22 into optical signals for transmission via the fiber optic line(s) of the cable 24." Paragraph 0032; "In a described embodiment, a well tool includes a webserver connected to a sensor and an actuator of the tool." Abstract; "The actuators 88, 90, 92 maybe electrically, hydraulically or otherwise operated." Paragraph 0042; "In addition, a corresponding one of the actuators 88, 90, 92 may be controlled via the respective web page to operate the associated device 80 or 82. Thus, in the system 68, a person with a connection to the Internet 102 at a remote location may, for example, monitor a pressure drop across or a flow rate through the device 80 and, based on this information, operate the actuator 88 to adjust the pressure drop or flow rate, or to close the device, as desired." Paragraph 0048)**

Dwinnell and Schultz are combinable for the same rationale as set forth above with respect to claim 1.

Claim 21:

Dwinnell describes the system of claim 12, comprising: means for transmitting data to the facility-interface module or modules. **(Dwinnell: "Each remote site system 101 gathers information and data from a particular remote site (i.e., an oil and gas drilling site or rig)**

and transmits the information and data to a central collection and distribution system 102 at least partially in the form of streaming media, and preferably digital streaming video." Paragraph 0031)

Claim 23:

Dwinnell describes the system of claim 12, comprising: an oil or gas facility communicatively coupled to the controller. **(Dwinnell: "Embodiments of the present invention as disclosed collect live productivity data and streaming media information broadcast from remote sites of interest (such as oil and gas drilling locations, construction sites, etc.) in real-time into a collection and distribution network that delivers this data and information to investors and managers via the Internet via a dynamic web page interface." abstract)**

12. Claim 2 is rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Publication No. 2002/0161685 (Dwinnell) in view of U.S. Patent Publication No. 2002/0018399 (Schultz) and further in view of U.S. Patent Publication No. 2003/0052180 (Huhn), U.S. Patent No. 6,967,589 (Peters), and U.S. Patent No. 6,665,568 (Hott).

Claim 2:

Dwinnell, Schultz, and Huhn do not explicitly describe tank sensors as described below. However, Peters teaches the tank sensors as described below.

Dwinnell, Schultz, Huhn, and Peters describe the system of claim 1,

- wherein the sensors include a tank level sensor of a tank at one of the facilities, and **(Peters: "Monitoring unit 120, connected to oil tank 95, measures the pressure at the bottom of the tank. With that information, as well as the diameter of the oil tank 95 and the specific gravity of the oil in the oil tank 95, the amount of oil in oil tank 95 can be determined by a formula as is known to those of skill in the art. Likewise, monitoring unit 130, connected to water tank 98, measures the pressure at the bottom of water tank 98. With that information, as well as the diameter of the water tank 98 and the specific gravity of water, the amount of water in water tank 98 can be determined by a formula as is known to those of skill in the art. In each case, additional sensors can be used, e.g., trip level sensors in the tanks. Other methods of measuring can be used, such as, infrared, microwave and float sensors." Col. 5, line 61 through col. 6, line 7)**
- wherein the datastore includes a record associating the tank with the facility, **(see the tanks in Peters and the association of ventures to wells in Dwinnell; Peters: see the tanks 95, 98 as illustrated in figure 1; Dwinnell: see the ventures (i.e., facility) and the associated wells (i.e., equipment) as illustrated in figure 6A and as described in paragraph 0067)**

- data from the tank being unavailable to users without an account associated with the tank. **(see the tanks in Peters and the availability and unavailability of data for accounts in Dwinnell; Peters: see the tanks 95, 98 as illustrated in figure 1; Dwinnell: see the accounts and the various ventures and wells as described in paragraphs 0057, 0067, 0068 and as illustrated in figures 6A, 6B; "Retrieval by web site users (investors and managers) of information and data stored in the archive system 302 or the database system 303 is controlled by standard authentication and authorization protocols. Users sign up for access to certain restricted features of the dynamic web site and receive a username and password to access desired information. Once a user has received an account, he is able to login into various otherwise-restricted web pages and thus be presented with a dynamically generated web page representative of the level of access that the user's particular account possesses." Paragraph 0057)**

One of ordinary skill in the art would have recognized that applying the known technique of Dwinnell, namely, a web based interface for oil and gas drilling location information, the known techniques of Schultz, namely, a web server based interface for oil well information and control, and the teachings of Huhn, namely, using addresses to control actuators in a process control system, with the teachings of Peters, namely, monitoring a gas/oil well, would have yielded predictable results and resulted in an improved system. Accordingly, applying the teachings of Dwinnell to provide a web interface for remote viewing of information about oil wells, the teachings of Schultz to use a web interface to view information and control devices in oil wells, and the teachings of Huhn to control actuators using addresses with the teachings of Peters to use tank sensors to monitor a gas/oil well would have been recognized by those of ordinary skill in

the art as resulting in an improved monitoring and control system (i.e., remote monitoring using sensors and control of oil wells using actuator addressing of Dwinnell based on the teachings of remote control of oil wells in Schultz, the teachings of controlling actuators using addressing in Huhn, and the teachings of monitoring an oil/gas well with tank sensors in Peters).

Dwinnell, Schultz, Huhn, and Peters do not explicitly describe accounts with authorization to send commands as described below. However, Hott teaches the accounts with authorization to send commands as described below.

- and wherein the accounts: **(Dwinnell: see the accounts and the various ventures and wells as described in paragraphs 0057, 0067, 0068 and as illustrated in figures 6A, 6B; "Retrieval by web site users (investors and managers) of information and data stored in the archive system 302 or the database system 303 is controlled by standard authentication and authorization protocols. Users sign up for access to certain restricted features of the dynamic web site and receive a username and password to access desired information. Once a user has received an account, he is able to login into various otherwise-restricted web pages and thus be presented with a dynamically generated web page representative of the level of access that the user's particular account possesses." Paragraph 0057)**
    - designate oil or gas facilities to which a given user is authorized to send the user command to actuate the actuator; **(see the authentication of particular users to control components in Hott and the control of actuators in Schultz; Hott: see**

the authentication of users and authorization of only select users (e.g., owners of the well) to control components as described in col. 4, line 38 through col. 5, line 10; "The IW-DDCS may have alternate levels of access which it provides to various clients. Some clients may only be allowed access to certain components of IW-DDCS depending upon their status. For example, individuals wishing to monitor production rates for the purpose of determining whether or not to invest in a well may be given access to view only production data from a well, whereas, a client who owned a well may be given access to both the monitoring components of IW-DDCS as well as the control components of IW-DDCS." Col. 5, lines 1-10; Schultz: "In addition, a corresponding one of the actuators 88, 90, 92 may be controlled via the respective web page to operate the associated device 80 or 82. Thus, in the system 68, a person with a connection to the Internet 102 at a remote location may, for example, monitor a pressure drop across or a flow rate through the device 80 and, based on this information, operate the actuator 88 to adjust the pressure drop or flow rate, or to close the device, as desired." Paragraph 0048)

- include a first account corresponding to a first group of oil or gas facilities, users of the first account being authorized to send commands to remotely control fluid handling devices at the first group of oil or gas facilities; and **(see the various accounts associated with different remote sites in Dwinnell, the authentication of particular users to control components in Hott, and the**

control of actuators in Schultz; Hott: "The IW-DDCS may have alternate levels of access which it provides to various clients. Some clients may only be allowed access to certain components of IW-DDCS depending upon their status. For example, individuals wishing to monitor production rates for the purpose of determining whether or not to invest in a well may be given access to view only production data from a well, whereas, a client who owned a well may be given access to both the monitoring components of IW-DDCS as well as the control components of IW-DDCS." Col. 5, lines 1-10; Schultz: "In addition, a corresponding one of the actuators 88, 90, 92 may be controlled via the respective web page to operate the associated device 80 or 82. Thus, in the system 68, a person with a connection to the Internet 102 at a remote location may, for example, monitor a pressure drop across or a flow rate through the device 80 and, based on this information, operate the actuator 88 to adjust the pressure drop or flow rate, or to close the device, as desired." Paragraph 0048; Dwinnell: see the accounts and the various ventures and wells as described in paragraphs 0057, 0067, 0068 and as illustrated in figures 6A, 6B)

- include a second account corresponding to a second group of oil or gas facilities, the first group being different from the second group, users of the second account being authorized to send commands to remotely control fluid handling devices at the second group of oil or gas facilities **(see the various accounts associated with different remote sites in Dwinnell, the authentication of particular users**

to control components in Hott, and the control of actuators in Schultz; Hott: "The IW-DDCS may have alternate levels of access which it provides to various clients. Some clients may only be allowed access to certain components of IW-DDCS depending upon their status. For example, individuals wishing to monitor production rates for the purpose of determining whether or not to invest in a well may be given access to view only production data from a well, whereas, a client who owned a well may be given access to both the monitoring components of IW-DDCS as well as the control components of IW-DDCS." Col. 5, lines 1-10; Schultz: "In addition, a corresponding one of the actuators 88, 90, 92 may be controlled via the respective web page to operate the associated device 80 or 82. Thus, in the system 68, a person with a connection to the Internet 102 at a remote location may, for example, monitor a pressure drop across or a flow rate through the device 80 and, based on this information, operate the actuator 88 to adjust the pressure drop or flow rate, or to close the device, as desired." Paragraph 0048; Dwinnell: see the accounts and the various ventures and wells as described in paragraphs 0057, 0067, 0068 and as illustrated in figures 6A, 6B)

One of ordinary skill in the art would have recognized that applying the known technique of Dwinnell, namely, a web based interface for oil and gas drilling location information, the known techniques of Schultz, namely, a web server based interface for oil well information and control, the teachings of Huhn, namely, using addresses to control actuators in a process control system,

and the teachings of Peters, namely, monitoring a gas/oil well, with the teachings of Hott, namely, an internet wide distributed data control system, would have yielded predictable results and resulted in an improved system. Accordingly, applying the teachings of Dwinnell to provide a web interface for remote viewing of information about oil wells, the teachings of Schultz to use a web interface to view information and control devices in oil wells, the teachings of Huhn to control actuators using addresses, and the teachings of Peters to use tank sensors to monitor a gas/oil well with the teachings of Hott to have authorized accounts to control components would have been recognized by those of ordinary skill in the art as resulting in an improved monitoring and control system (i.e., remote monitoring using sensors and control of oil wells using actuator addressing and various accounts of Dwinnell based on the teachings of remote control of oil wells in Schultz, the teachings of controlling actuators using addressing in Huhn, the teachings of monitoring an oil/gas well with tank sensors in Peters, and the teachings of various users having access and control of oil field components in Hott).

13. Claim 3 is rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Publication No. 2002/0161685 (Dwinnell) in view of U.S. Patent Publication No. 2002/0018399 (Schultz) and further in view of U.S. Patent Publication No. 2003/0052180 (Huhn) and U.S. Patent No. 5,149,443 (Varnam).

Claim 3:

Dwinnell, Schultz, and Huhn do not explicitly describe oil/water sensors as described below. However, Varnam teaches the oil/water sensors as described below.

Dwinnell, Schultz, Huhn, and Peters describe the system of claim 1,

- wherein the sensors include a level sensor of an oil/water separation tank at one of the facilities configured to indicate a level at which oil meets water, and **(Varnam: "Also mounted on the floating arms 50 and 52 is at least one acoustical type oil layer thickness sensor 158. Sensor 158 acts to sense and determine the thickness of the oil layer lying within the defined oil collection area 54." Col. 6, lines 4-8)**
- wherein the datastore includes a record associating the tank with the facility. **(see the tanks in Varnam and the association of ventures to wells in Dwinnell; Varnam: see the tanks 200 as illustrated in figure 1; Dwinnell: see the ventures (i.e., facility) and the associated wells (i.e., equipment) as illustrated in figure 6A and as described in paragraph 0067)**

One of ordinary skill in the art would have recognized that applying the known technique of Dwinnell, namely, a web based interface for oil and gas drilling location information, the known techniques of Schultz, namely, a web server based interface for oil well information and control, and the teachings of Huhn, namely, using addresses to control actuators in a process control system, with the teachings of Varnam, namely, an oil recovery system with an oil/water sensor, would have yielded predictable results and resulted in an improved system. Accordingly, applying the teachings of Dwinnell to provide a web interface for remote viewing of information about oil wells, the teachings of Schultz to use a web interface to view information and control

devices in oil wells, and the teachings of Huhn to control actuators using addresses with the teachings of Varnam to use an oil/water sensor would have been recognized by those of ordinary skill in the art as resulting in an improved monitoring and control system (i.e., remote monitoring using various sensors and control of oil wells using actuator addressing of Dwinnell based on the teachings of remote control of oil wells in Schultz, the teachings of controlling actuators using addressing in Huhn, and the teachings of using an oil/water sensor in Varnam).

14. Claim 4 is rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Publication No. 2002/0161685 (Dwinnell) in view of U.S. Patent Publication No. 2002/0018399 (Schultz) and further in view of U.S. Patent Publication No. 2003/0052180 (Huhn) and U.S. Patent No. 7,967,066 (McStay).

Claim 4:

Dwinnell, Schultz, and Huhn do not explicitly describe a leak detector as described below. However, McStay teaches the leak detector as described below.

Dwinnell, Schultz, Huhn, and McStay describe the system of claim 1,

- wherein the sensors include a leak detector at one of the facilities, and **(McStay: see the leak detection sensors 320 as illustrated in figure 3)**

- wherein the datastore includes a record associating the leak detector with the facility. **(see the leak detector in McStay and the association of ventures to wells in Dwinnell; McStay: see the leak detection sensors 320 as illustrated in figure 3; Dwinnell: see the ventures (i.e., facility) and the associated wells (i.e., equipment) as illustrated in figure 6A and as described in paragraph 0067)**

One of ordinary skill in the art would have recognized that applying the known technique of Dwinnell, namely, a web based interface for oil and gas drilling location information, the known techniques of Schultz, namely, a web server based interface for oil well information and control, and the teachings of Huhn, namely, using addresses to control actuators in a process control system, with the teachings of McStay, namely, leak detection in an oil well, would have yielded predictable results and resulted in an improved system. Accordingly, applying the teachings of Dwinnell to provide a web interface for remote viewing of information about oil wells, the teachings of Schultz to use a web interface to view information and control devices in oil wells, and the teachings of Huhn to control actuators using addresses with the teachings of McStay to use a leak detection sensor in an oil well would have been recognized by those of ordinary skill in the art as resulting in an improved monitoring and control system (i.e., remote monitoring using various sensors and control of oil wells using actuator addressing of Dwinnell based on the teachings of remote control of oil wells in Schultz, the teachings of controlling actuators using addressing in Huhn, and the teachings of using a leak detector in an oil well in McStay).

15. Claims 6 and 15 are rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Publication No. 2002/0161685 (Dwinnell) in view of U.S. Patent Publication No. 2002/0018399 (Schultz) and further in view of U.S. Patent Publication No. 2003/0052180 (Huhn) and U.S. Patent Publication No. 2002/0156837 (Batke).

Claim 6:

Dwinnell, Schultz, and Huhn do not explicitly describe two ports as described below. However, Batke teaches the two ports as described below.

Dwinnell, Schultz, Huhn, and Batke describe the system of claim 5, wherein:

- the web server communicates with user devices via a first network port of a computing device executing the web server; and **(Batke: see the web server communication by the web access interface 30 via the internet interface 32 (i.e., first network port) as illustrated in figure 1 and as described in paragraph 0020; "Referring to FIG. 1, a new industrial control system 100 used to control an industrial process includes a web access interface 30 that is coupled to one or more control devices, which are shown as control devices 110, 120, 130 and 140. The web access interface 30 is capable of communications with one or more remote computer terminals or other remote devices 10 by way of the Internet or World Wide Web (or simply the "web") by way of an Internet interface 32. The web access interface 30 is also coupled to**

the control devices 110-140 by way of a control network interface 62 having one or more ports, which in this exemplary embodiment are shown to include a first port 60 and a second port 70. Communication links 80 in turn couple the network interface 62 with the control devices 110-140." Paragraph 0020)

- the site server communicates with facilities via a second network port of the computing device, the second network port being different from the first network port. **(Batke: see the control device 110-140 communication by the web access interface 30 via the control network interface 62 (i.e., second network port) as illustrated in figure 1 and as described in paragraph 0020; "Referring to FIG. 1, a new industrial control system 100 used to control an industrial process includes a web access interface 30 that is coupled to one or more control devices, which are shown as control devices 110, 120, 130 and 140. The web access interface 30 is capable of communications with one or more remote computer terminals or other remote devices 10 by way of the Internet or World Wide Web (or simply the "web") by way of an Internet interface 32. The web access interface 30 is also coupled to the control devices 110-140 by way of a control network interface 62 having one or more ports, which in this exemplary embodiment are shown to include a first port 60 and a second port 70. Communication links 80 in turn couple the network interface 62 with the control devices 110-140." Paragraph 0020)**

One of ordinary skill in the art would have recognized that applying the known technique of Dwinnell, namely, a web based interface for oil and gas drilling location information, the known techniques of Schultz, namely, a web server based interface for oil well information and control,

and the teachings of Huhn, namely, using addresses to control actuators in a process control system, with the teachings of Batke, namely, a process control system with a web server, would have yielded predictable results and resulted in an improved system. Accordingly, applying the teachings of Dwinnell to provide a web interface for remote viewing of information about oil wells, the teachings of Schultz to use a web interface to view information and control devices in oil wells, and the teachings of Huhn to control actuators using addresses with the teachings of Batke to have various network configurations for the control device in the control system would have been recognized by those of ordinary skill in the art as resulting in an improved monitoring and control system (i.e., remote monitoring and control of oil wells using actuator addressing and various ports for communication of Dwinnell based on the teachings of remote control of oil wells in Schultz, the teachings of controlling actuators using addressing in Huhn, and the teachings of multiple ports for communication within the process control system in Batke).

Claim 15:

Dwinnell, Schultz, and Huhn do not explicitly describe a private network as described below. However, Batke teaches the private network as described below.

Dwinnell, Schultz, Huhn, and Batke describe the system of claim 12, wherein the controller is communicatively coupled to the actuator or sensor via a private local area network. **(Batke: see the communication links 80 between the web access interface 30 and the control devices 110-140 as illustrated in figure 1 and as described in paragraphs 0020, 0029, 0031; "The communication links 80 can be wire cable, fiber optic or wireless, and are typically a proprietary or specialized network suitable for industrial control." Paragraph 0020)**

Dwinnell, Schultz, Huhn, and Batke are combinable for the same rationale as set forth above with respect to claim 6.

16. Claims 11 and 17 are rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Publication No. 2002/0161685 (Dwinnell) in view of U.S. Patent Publication No. 2002/0018399 (Schultz) and further in view of U.S. Patent Publication No. 2003/0052180 (Huhn) and U.S. Patent No. 6,967,589 (Peters).

Claim 11:

Dwinnell, Schultz, and Huhn do not explicitly describe pull requests as described below. However, Peters teaches the pull requests as described below.

Dwinnell, Schultz, Huhn, and Peters describe the system of claim 1, wherein the facility-interface module or modules are configured to send pull requests to facilities to retrieve data buffered at the facilities. **(Peters: "Relay unit 140 can query each, some or all of the monitoring units 100, 110, 120 and 130 or receive data and requests from each, some or all of them." Col. 6, lines 32-35)**

Dwinnell, Schultz, Huhn, and Peters are combinable for the same rationale as set forth above with respect to claim 2.

Claim 17:

Dwinnell, Schultz, and Huhn do not explicitly describe pushes as described below. However, Peters teaches the pushes as described below.

Dwinnell, Schultz, Huhn, and Peters describe the system of claim 12, wherein controller is configured to periodically push buffered data to the facility-interface module or modules. **(Peters: "Relay units may be configured to do any of these "wake ups" and to alter their alarm time intervals. This allows given periods for daily data dumps from monitoring units to the host interface 200 via the relay unit 240 and/or host interface 200 queries to monitoring units via the relay unit 240, both at any time interval. Preferably, the default setting for the relay unit 240 is to commence data dumps to the host interface at twelve (12) AM (midnight) each day and to wake up and await for host interface queries every 30 minutes for 2 minutes." Col. 10, lines 30-39)**

Dwinnell, Schultz, Huhn, and Peters are combinable for the same rationale as set forth above with respect to claim 2.

17. Claims 13-14 are rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Publication No. 2002/0161685 (Dwinnell) in view of

U.S. Patent Publication No. 2002/0018399 (Schultz) and further in view of U.S. Patent Publication No. 2003/0052180 (Huhn) and U.S. Patent Publication No. 2005/0084988 (Huang).

Claim 13:

Dwinnell, Schultz, and Huhn do not explicitly describe threads as described below. However, Huang teaches the threads as described below.

Dwinnell, Schultz, Huhn, and Huang describe the system of claim 12, wherein the system is configured to instantiate at least four of the following as distinct threads from one another:

- a thread configured to sends and receive data requests; **(Huang: see the trace data collection tread receiving start/stop triggered by events from the machine control thread and sending trace data to the trace data store as illustrated in figure 5; "For the status data path 506, an independently executing thread obtains all sensor and/or actuator data from the various I/O module controllers to be passed along to user interface module 508 for display." Paragraph 0075)**
- a thread configured to synchronize other threads with updated information; **(Huang: see the trace data report thread updating the status data collection thread with data from the trace data store and the event driven data as illustrated in figure 5 and as described in paragraph 0076)**
- a thread configured to set a target state of actuators; **(Huang: see the machine control thread as illustrated in figure 5; "In one embodiment, the execution thread for**

collecting the trace data may have a higher priority even than the control thread that controls the actuators (which is also shown in FIG. 5)." Paragraph 0076)

- a thread configured to obtain updated sensor readings; **(Huang: see the status data collection thread as illustrated in figure 5; "For the status data path 506, an independently executing thread obtains all sensor and/or actuator data from the various I/O module controllers to be passed along to user interface module 508 for display." Paragraph 0075)**
- a thread configured to process user interactions; and
- a thread that eliminates other threads upon detecting a problem with the eliminated threads.

One of ordinary skill in the art would have recognized that applying the known technique of Dwinnell, namely, a web based interface for oil and gas drilling location information, the known techniques of Schultz, namely, a web server based interface for oil well information and control, and the teachings of Huhn, namely, using addresses to control actuators in a process control system, with the teachings of Huang, namely, using various threads in a process control system, would have yielded predictable results and resulted in an improved system. Accordingly, applying the teachings of Dwinnell to provide a web interface for remote viewing of information about oil wells, the teachings of Schultz to use a web interface to view information and control devices in oil wells, and the teachings of Huhn to control actuators using addresses with the teachings of Huang to use various threads in a process control system would have been recognized by those of ordinary skill in the art as resulting in an improved monitoring and control system (i.e., remote monitoring and control of oil wells using actuator addressing and

various threads for control of Dwinnell based on the teachings of remote control of oil wells in Schultz, the teachings of controlling actuators using addressing in Huhn, and the teachings of using various threads for control in a process control system in Huang).

Claim 14:

Dwinnell, Schultz, and Huhn do not explicitly describe threads as described below. However, Huang teaches the threads as described below.

Dwinnell, Schultz, Huhn, and Huang describe the system of claim 12, wherein the system is configured to instantiate at least two of the following as distinct threads from one another:

- a thread configured to sends or receive data request; **(Huang: see the trace data collection tread receiving start/stop triggered by events from the machine control thread and sending trace data to the trace data store as illustrated in figure 5; "For the status data path 506, an independently executing thread obtains all sensor and/or actuator data from the various I/O module controllers to be passed along to user interface module 508 for display." Paragraph 0075)**
- a thread configured to synchronize other threads with updated information; **(Huang: see the trace data report thread updating the status data collection thread with data from the trace data store and the event driven data as illustrated in figure 5 and as described in paragraph 0076)**
- a thread configured to set a target state of actuators; **(Huang: see the machine control thread as illustrated in figure 5; "In one embodiment, the execution thread for**

collecting the trace data may have a higher priority even than the control thread that controls the actuators (which is also shown in FIG. 5)." Paragraph 0076)

- a thread configured to obtain updated sensor readings; **(Huang: see the status data collection thread as illustrated in figure 5; "For the status data path 506, an independently executing thread obtains all sensor and/or actuator data from the various I/O module controllers to be passed along to user interface module 508 for display." Paragraph 0075)**
- a thread configured to process user interactions; and
- a thread that eliminates other threads upon detecting a problem with the eliminated threads.

Dwinnell, Schultz, Huhn, and Haung are combinable for the same rationale as set forth above with respect to claim 13.

18. Claim 16 is rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Publication No. 2002/0161685 (Dwinnell) in view of U.S. Patent Publication No. 2002/0018399 (Schultz) and further in view of U.S. Patent Publication No. 2003/0052180 (Huhn) and U.S. Patent Publication No. 2011/0051645 (Hong).

Claim 16:

Dwinnell, Schultz, and Huhn do not explicitly describe checking validity as described below. However, Hong teaches the checking validity as described below.

Dwinnell, Schultz, Huhn, and Hong describe the system of claim 12, wherein controller is communicatively coupled to the actuator or sensor via a frame-based carrier-sense multiple access protocol with collision detection. **(see the controller in Dwinnell and the CSMA communication in Hong; Hong: "The node sensed collision and the nodes transmitted signals to the node sensed collision transmit data packets using a Carrier Sense Multiple Access with Collision Avoidance (CSMA/CA) technique, which uses RTS/CTS for avoiding collision. Therefore, the nodes transmitted the signals check if the signals they transmitted collide in the upper node through a signal overhearing period. When a collision signal is detected, the nodes perform a channel allocation operation using the RTS/CTS packet in the data transmission period." Paragraph 0083; Dwinnell: "The remote site system 101 comprises a remote site video and data capture server 202 (hereinafter referred to as a remote site capture server 202 or "RSCS 202") in electronic communication with a plurality of cameras 205 positioned strategically about the remote site." Paragraph 0039)**

One of ordinary skill in the art would have recognized that applying the known technique of Dwinnell, namely, a web based interface for oil and gas drilling location information, the known techniques of Schultz, namely, a web server based interface for oil well information and control, and the teachings of Huhn, namely, using addresses to control actuators in a process control system, with the teachings of Hong ,namely, using various communication techniques in a sensor

network, would have yielded predictable results and resulted in an improved system. Accordingly, applying the teachings of Dwinnell to provide a web interface for remote viewing of information about oil wells, the teachings of Schultz to use a web interface to view information and control devices in oil wells, and the teachings of Huhn to control actuators using addresses with the teachings of using various communication techniques in a sensor network to Hong would have been recognized by those of ordinary skill in the art as resulting in an improved monitoring and control system (i.e., remote monitoring and control of oil wells using actuator addressing and various communication techniques of Dwinnell based on the teachings of remote control of oil wells in Schultz, the teachings of controlling actuators using addressing in Huhn, and the teachings of using CSMA by sensors in Hong).

19. Claim 22 is rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Publication No. 2002/0161685 (Dwinnell) in view of U.S. Patent Publication No. 2002/0018399 (Schultz) and further in view of U.S. Patent Publication No. 2003/0052180 (Huhn) and U.S. Patent No. 4,052,703 (Collins).

Claim 22:

Dwinnell, Schultz, and Huhn do not explicitly describe checking validity as described below. However, Collins teaches the checking validity as described below.

Dwinnell, Schultz, Huhn, and Collins describe the system of claim 12, comprising: means for checking validity of a command. **(Collins: "A further object of the invention is to provide a control system capable of determining the validity of a message received over a cable without having to re-transmit the message to the remote control station." Col. 3, lines 65-68; "In this case, the answer being "no", another diamond 106 asks the question whether or not the instruction is a valid command for operation in the automatic mode. If the answer is "yes", the instruction signal is sent to block 107. The tests required in the various diamond or test functions employed in the logic control system of the present invention may be performed using a data masking technique or a "rotate right" technique or any other logical operation for determining the content or validity of a logical signal." Col. 11, lines 21-30)**

One of ordinary skill in the art would have recognized that applying the known technique of Dwinnell, namely, a web based interface for oil and gas drilling location information, the known techniques of Schultz, namely, a web server based interface for oil well information and control, and the teachings of Huhn, namely, using addresses to control actuators in a process control system, with the teachings of Collins, namely, validating commands for an oil well system, would have yielded predictable results and resulted in an improved system. Accordingly, applying the teachings of Dwinnell to provide a web interface for remote viewing of information about oil wells, the teachings of Schultz to use a web interface to view information and control devices in oil wells, and the teachings of Huhn to control actuators using addresses with the teachings of Collins to validate commands for devices within an oil well would have been recognized by those of ordinary skill in the art as resulting in an improved monitoring and

control system (i.e., remote monitoring and control of oil wells using actuator addressing and validation of control of Dwinnell based on the teachings of remote control of oil wells in Schultz, the teachings of controlling actuators using addressing in Huhn, and the teachings of validating control instructions for underwater oil installations in Collins).

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher E. Everett whose telephone number is (571)272-

2851. The examiner can normally be reached on Monday through Friday from 8:00 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kenneth Lo can be reached on 571-272-9774. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

This collection of information is required by 37 CFR 1.16. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**
If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

REMARKS

In the office action, the Examiner rejected claims 1-23 and objected to claim 13-14. By this response, Applicants amend claims 2, 13, and 14. The amendments are made to clarify the claim language and narrow the distinction between broadest reasonable interpretation applied by the Examiner and the interpretation that one of ordinary skill in the art would reach. As such, the present amendments should not affect rights available under the doctrine of equivalents. These amendments do not introduce new matter and are fully supported by the original disclosure. In view of the foregoing amendments and the following remarks, Applicants respectfully request consideration and allowance of all pending claims.

Claim Objections

In the office action, the Examiner objected to claims 13-14 for reciting "threads." Without conceding the merits of the objection, to expedite allowance, the claims have been amended to moot the rejection. Applicants respectfully ask that the rejection be withdrawn.

Claim Rejections under 35 U.S.C. § 103

The Examiner rejected claims 1-23 as allegedly obvious on the following grounds:

1) claims 1, 5, 7-10, 12, 18-21, and 23 were rejected over U.S. Pat. Pub. 20020161685 ("Dwinnell"), U.S. Pat. Pub. 20020018399 ("Schultz"), and U.S. Pat. Pub. 20030052180 ("Huhn");

2) claims 2, 11, and 17 were rejected over Dwinnell, Schultz, Huhn, and U.S. Pat. 6,967,589 ("Peters");

3) claim 3 was rejected over Dwinnell, Schultz, Huhn, and U.S. Pat. 5,149,443 ("Varnam");

4) claim 4 was rejected over Dwinnell, Schultz, Huhn, and U.S. Pat. 7,967,066 ("McStay");

The Integration Group of The Americas Ex. 1004-Page 215
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

5) claims 6 and 15 were rejected over Dwinnell, Schultz, Huhn, and U.S. Pat. Pub. 20020156837 ("Batke");

6) claims 13 and 14 were rejected over Dwinnell, Schultz, Huhn, and U.S. Pat. Pub. 20050084988 ("Huang");

7) claim 16 was rejected over Dwinnell, Schultz, Huhn, and U.S. Pat. Pub. 20110051645 ("Hong"); and

8) claim 22 was rejected over Dwinnell, Schultz, Huhn, and U.S. Pat. 4,052,703 ("Collins").

The pending claims, however, are distinct from and allowable over the art cited in these rejections for at least the reasons explained below.

Legal Precedent and Guidelines

The burden of establishing a *prima facie* case of obviousness falls on the Examiner. *Ex parte Wolters and Kuypers*, 214 U.S.P.Q. 735 (PTO Bd. App. 1979). Obviousness depends on several underlying factual inquiries:

> Under §103, the scope and content of the prior art are to be determined, differences between the prior art and the claims at issue are to be ascertained, and the level of ordinary skill in the pertinent art are to be resolved. Against this background the obviousness or non-obviousness of the subject matter is to be determined. Such secondary considerations as commercial success, long-felt but unresolved needs, failure of others, etc., might be utilized to give light to the circumstances surrounding the origin of the subject matter sought to be patented. *KSR Int'l Co. v. Teleflex Inc.*, 550 U.S. 398, 406, 127 S.Ct. 1727, 167 L.Ed.2d 705 (2007) (quoting *Graham v. John Deere Co.*, 383 U.S. 1, 17-18, 86 S.Ct. 684, 15 L.Ed.2d 545 (1966)).

As explained by the Court in *KSR International Co. v. Teleflex Inc*, "rejections on obviousness grounds cannot be sustained by mere conclusory statements; instead, there must be some articulated reasoning with some rational underpinning to support the legal conclusion of obviousness."

The Integration Group of The Americas Ex. 1004-Page 216
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

The cited references, taken alone or in hypothetical combination, fail to teach or suggest features recited by independent claim 1

Independent claim 1 recites the following:

> a plurality of accounts, each account corresponding to an entity operating one or more geographically distributed oil or gas facilities, the accounts associating different oil or gas facilities with different entities.

These features are not taught in the art of record, and for at least for this reason, the pending claims are allowable.

For this feature, the rejection cites Dwinnell, which teaches that webcams can be placed at drilling sites to watch the progress of workers drilling a well. *See* Dwinnell, para. 15. The rejection relies on paragraphs 57, 67, and 68 and figures 6A and 6B of the reference. Office action, page 5.

Dwinnell does not teach or suggest the above-quoted features of claim 1. Dwinnell teaches a system that hosts and streams video and data for a single entity drilling a plurality of wells, with different features offered to different users based on their level of access. *See* Dwinnell, para. 57. Access is mediated by feature, not be well. *See id.* (stating "[u]sers sign up for access to certain restricted features."). Users have a "level of access" to these features, presumably offering more data streams, reports, or alarms on the same set of wells to users who pay for a higher-level of service. *See id.* Indeed, Dwinnell's system is depicted in figures 1 and 6A (shown below, with multiple "ventures" listed) as granting access to data from every well to a user with a sufficiently high level of access.

The Integration Group of The Americas Ex. 1004-Page 217
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

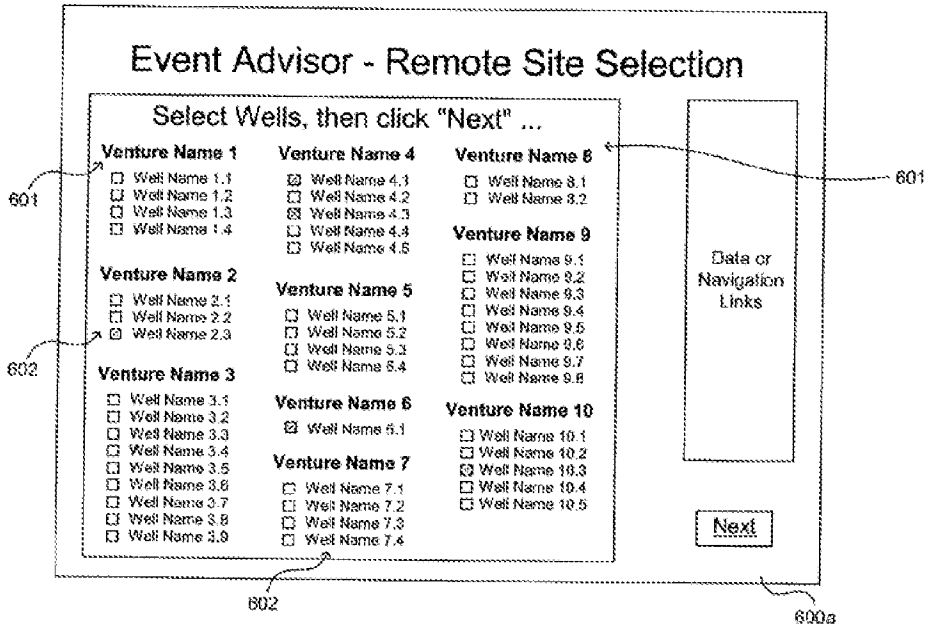

FIG. 6A

Thus, Dwinnell does not teach of suggest "a plurality of accounts, each account corresponding to an entity operating one or more geographically distributed oil or gas facilities, the accounts associating different oil or gas facilities with different entities," as claimed.

The dependent claims incorporate the features of the independent claims from which they depend. Moreover, the other cited references used in the other rejections do no cure the above-described distinctions from the references used to reject the independent claims. Thus, for at least the reasons discussed above with reference to the independent claims, the dependent claims are allowable.

The cited references, taken alone or in hypothetical combination, fail to teach or suggest features recited by dependent claim 2

Dependent claim 2 states that the user accounts "designate oil or gas facilities to which a given user is authorized to send the user command to actuate the actuator" among other features. These features are not taught or suggested by the art of record.

The Integration Group of The Americas Ex. 1004-Page 218
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

Dwinnell does not teach selective remote control of oil and gas related facilities, in part, because the system of Dwinnell is designed to operate when people are present at the facility. Dwinnell describes webcams for drilling operations, i.e., the part of a well's life cycle when people are present to run the drilling equipment. *See* Dwinnell, abstract, para. 15. Because people are present, there is no reason to exercise remote control.

In contrast, claim 2 recites features by which different users remotely control their oil or gas facilities (e.g., after drilling, during production, when people are not present for the reasons described in paragraphs 3 and 4 of the Background of the present application), where different users have access to control different facilities.

Dwinnell's system is not suited for account-by-account mediation of remote control of oil-or-gas facilities, in part because the data model for accounts in Dwinnell is different from that described above in claim 1 and, in part, because Dwinnell does not teach how to use the accounts to selectively provide access for control purposes. For this reason as well, claim 2 is allowable.

Huhn is not properly combined with the other references because Huhn is non-analogous art

Non-analogous art cannot properly be pertinent prior art under 35 U.S.C. § 103. In re Pagliaro, 210 U.S.P.Q. 888, 892 (C.C.P.A. 1981). For the teachings of a reference to be prior art under 35 U.S.C. § 103, there must be some basis for concluding that the reference would have been considered by one skilled in the particular art working on the particular problem with which the invention pertains. *In re Horne*, 203 U.S.P.Q. 969, 971 (C.C.P.A. 1979). The determination of whether a reference is from a non-analogous art is set forth in a two-step test given in *Union Carbide Corp. v. American Can Co.*, 724 F.2d 1567, 220 U.S.P.Q. 584 (Fed. Cir. 1984). In *Union Carbide*, the court found that the first determination was whether "the reference is within the field of the inventor's endeavor." If it is not, one must proceed to the second step "to determine whether the reference is reasonably pertinent to the particular problem with which the inventor was involved." In regard to the second step, *Bott v. Fourstar Corp.*, 218 U.S.P.Q. 358 (E.D. Mich. 1983) determined that "analogous art is that field of art which a person of ordinary

The Integration Group of The Americas Ex. 1004-Page 219
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

skill in the art would have been apt to refer in attempting to solve the problem solved by a proposed invention." "To be relevant the area of art should be where one of ordinary skill in the art would be aware that similar problems exist." *Id.*

In Huhn, "an apparatus is provided for use in a HVAC system." Huhn, para. 5. The inventors field of endeavor (for the present claims) relates multi-tenant software-as-a-service (SaaS) systems for remote control and monitoring of oil and gas related facilities. Huhn, thus, is not in the inventors' field of endeavor.

Huhn is not reasonably pertinent to the particular problem with which the inventors were involved. The present application explains that the inventors sought to provide, among other things, in order to address the problems in the first two paragraphs of the Background, "a web interface in a web browser on user devices…, such that fluid-handling devices can be controlled remotely without the need to install special-purpose software on the computing device through which remote control is exercised." Application, para. 17. HVAC equipment is not pertinent to this problem.

Thus, Huhn is neither in the inventors' field of endeavor or reasonably pertinent to the particular problem with which the inventors were involved. As such, Huhn is not properly combined in a Section 103 rejection of the present claims.

Reservation of Arguments

Above, Applicants identify reasons why the present rejections should not be applied to the pending claims. This explanation, however, should not be construed as an admission that other features of the claims beyond those discussed, including the combination of claim features, are taught or suggested by the cited art, or that the rejections are otherwise proper. In the interest of brevity, Applicants have refrained from providing an exhaustive explanation of every basis for allowing the claims. Accordingly, Applicants reserve the right to identify other grounds for overcoming the present rejections and the cited art, and Applicants reiterate that the amendments and arguments above are made without prejudice, including to rights available under the doctrine of equivalents.

The Integration Group of The Americas Ex. 1004-Page 220
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

Conclusion

Applicants respectfully submit that all pending claims should be in condition for allowance. However, if the Examiner believes certain amendments are necessary to clarify the present claims or if the Examiner wishes to resolve any other issues by way of a telephone conference, the Examiner is kindly invited to contact the undersigned attorney at the telephone number indicated below.

Respectfully submitted,

Date: 21 March 2017

/Joshua Tucker/

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111
If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371
If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office
If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

AMENDMENTS TO THE CLAIMS

The following is a complete listing of the claims, which replaces all previous versions and listings of the claims.

1. (original) A hosted, web-based, remote industrial monitoring and control system for geographically distributed facilities in oil and gas fields, the system comprising:

a computer-implemented datastore storing:

a plurality of accounts, each account corresponding to an entity operating one or more geographically distributed oil or gas facilities, the accounts associating different oil or gas facilities with different entities; and

network addresses by which industrial monitoring or control equipment at the facilities is accessible via cellular network connections, the monitoring or control equipment including sensors or actuators;

a computer-implemented facility-interface module or modules configured to obtain data from the sensors at the facilities and send commands to the actuators at the facilities via the cellular network connections; and

a computer-implemented web-interface module or modules configured to send instructions to present control interfaces in web browsers executing on user computing devices logged in to the accounts and to receive commands to control actuators from the user computing devices,

wherein the system is configured to receive, with the web-interface module or modules, a user command to actuate an actuator entered via a presented control interface, identify a network address in the datastore corresponding to a facility at which the actuator is located, and send instructions with the facility-interface module or modules to the facility to actuate the actuator.

2. (currently amended) The system of claim 1, wherein the sensors include a tank level sensor of a tank at one of the facilities, and wherein the datastore includes a record associating the tank with the facility, data from the tank being unavailable to users

The Integration Group of The Americas Ex. 1004-Page 224
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

without an account associated with the tank, and wherein the accounts:

designate oil or gas facilities to which a given user is authorized to send the user command to actuate the actuator;

include a first account corresponding to a first group of oil or gas facilities, users of the first account being authorized to send commands to remotely control fluid handling devices at the first group of oil or gas facilities; and

include a second account corresponding to a second group of oil or gas facilities, the first group being different from the second group, users of the second account being authorized to send commands to remotely control fluid handling devices at the second group of oil or gas facilities.

3. (original) The system of claim 1, wherein the sensors include a level sensor of an oil/water separation tank at one of the facilities configured to indicate a level at which oil meets water, and wherein the datastore includes a record associating the tank with the facility.

4. (original) The system of claim 1, wherein the sensors include a leak detector at one of the facilities, and wherein the datastore includes a record associating the leak detector with the facility.

5. (original) The system of claim 1, wherein:

the web-interface module or modules comprises a web server; and

the facility-interface module or modules comprises a site server distinct from the web server.

6. (original) The system of claim 5, wherein:

the web server communicates with user devices via a first network port of a computing device executing the web server; and

The Integration Group of The Americas Ex. 1004-Page 225
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

the site server communicates with facilities via a second network port of the computing device, the second network port being different from the first network port.

7. (original) The system of claim 1, wherein:

the data store stores subscription information associated with at least some of the accounts.

8. (original) The system of claim 1, wherein the facility-interface module or modules comprise:

means for interfacing with a plurality of site controllers associated with the facilities.

9. (original) The system of claim 1, wherein the web-interface module or modules comprise:

means for sending instructions to present a control interface on the user devices.

10. (original) The system of claim 1, wherein the datastore stores accounts for more than one hundred facilities, and the web-interface module or modules are configured interface with more than one hundred user devices.

11. (original) The system of claim 1, wherein the facility-interface module or modules are configured to send pull requests to facilities to retrieve data buffered at the facilities.

12. (original) The system of claim 1, comprising:

a controller at one of the facilities communicatively coupled to an actuator or a sensor.

The Integration Group of The Americas Ex. 1004-Page 226
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

13. (currently amended) The system of claim 12, wherein the system is configured to instantiate at least four of the following ~~comprising at least four of the following~~ as distinct threads from one another:

a thread configured to sends and receive data requests;

a thread configured to synchronize other threads with updated information;

a thread configured to set a target state of actuators;

a thread configured to obtain updated sensor readings;

a thread configured to process user interactions; and

a thread that eliminates other threads upon detecting a problem with the eliminated threads.

14. (currently amended) The system of claim 12, , wherein the system is configured to instantiate at least ~~comprising at least~~ two of the following as distinct threads from one another:

a thread configured to sends or receive data request;

a thread configured to synchronize other threads with updated information;

a thread configured to set a target state of actuators;

a thread configured to obtain updated sensor readings;

a thread configured to process user interactions; and

a thread that eliminates other threads upon detecting a problem with the eliminated threads.

15. (original) The system of claim 12, wherein the controller is communicatively coupled to the actuator or sensor via a private local area network.

16. (original) The system of claim 12, wherein controller is communicatively coupled to the actuator or sensor via a frame-based carrier-sense multiple access protocol with collision detection.

The Integration Group of The Americas Ex. 1004-Page 227
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

17. (original) The system of claim 12, wherein controller is configured to periodically push buffered data to the facility-interface module or modules.

18. (original) The system of claim 12, comprising:

means for ensuring at least some data is not lost if network access ceases intermittently.

19. (original) The system of claim 12, comprising:

means for translating a command for an actuator from an input format to a format configured to effectuate changes in the actuator.

20. (original) The system of claim 19, comprising:

means for executing control routines implicated by translated commands on an individual actuator or sensor.

21. (original) The system of claim 12, comprising:

means for transmitting data to the facility-interface module or modules.

22. (original) The system of claim 12, comprising:

means for checking validity of a command.

23. (original) The system of claim 12, comprising:

an oil or gas facility communicatively coupled to the controller.

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

docket_ip@pillsburylaw.com

The Integration Group of The Americas Ex. 1004-Page 280
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

Office Action Summary	Application No. 14/984,422	Applicant(s) PHILLIPS, AARON	
	Examiner Christopher E. Everett	Art Unit 2121	AIA (First Inventor to File) Status No

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE *3* MONTHS FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1)☒ Responsive to communication(s) filed on *12/30/2015*.

☐ A declaration(s)/affidavit(s) under **37 CFR 1.130(b)** was/were filed on _____.

2a)☐ This action is **FINAL**. 2b)☒ This action is non-final.

3)☐ An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.

4)☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims*

5)☒ Claim(s) *1-23* is/are pending in the application.

5a) Of the above claim(s) _____ is/are withdrawn from consideration.

6)☐ Claim(s) _____ is/are allowed.

7)☒ Claim(s) *1-23* is/are rejected.

8)☐ Claim(s) _____ is/are objected to.

9)☐ Claim(s) _____ are subject to restriction and/or election requirement.

* If any claims have been determined allowable, you may be eligible to benefit from the **Patent Prosecution Highway** program at a participating intellectual property office for the corresponding application. For more information, please see http://www.uspto.gov/patents/init_events/pph/index.jsp or send an inquiry to PPHfeedback@uspto.gov.

Application Papers

10)☐ The specification is objected to by the Examiner.

11)☒ The drawing(s) filed on *12/30/2015* is/are: a)☒ accepted or b)☐ objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

Priority under 35 U.S.C. § 119

12)☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

Certified copies:

a)☐ All b)☐ Some** c)☐ None of the:

1.☐ Certified copies of the priority documents have been received.

2.☐ Certified copies of the priority documents have been received in Application No. _____.

3.☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

** See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) ☒ Notice of References Cited (PTO-892)

2) ☐ Information Disclosure Statement(s) (PTO/SB/08a and/or PTO/SB/08b) Paper No(s)/Mail Date _____.

3) ☐ Interview Summary (PTO-413) Paper No(s)/Mail Date. _____ .

4) ☐ Other: _____.

The Integration Group of The Americas Ex. 1004 Page 281
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

DETAILED ACTION

1. The present application is being examined under the pre-AIA first to invent provisions.

2. Claims 1-23 are pending.

Claim Objections

3. Claims 13-14 are objected to because of the following informalities: "threads" are ambiguous as to the metes and bounds of the limitation. In particular, claim 1 is directed to a system with components (i.e., computer-implemented datastore, computer-implemented modules) but claims 13-14 add threads (i.e., software per se) so it is unclear how the system with components includes software by itself. Applicant is advised that the terminology should be clarified to remove the ambiguity (e.g., memory storing instructions for threads and processor executing the threads). Appropriate correction is required.

Claim Rejections - 35 USC § 112

4. The following is a quotation of 35 U.S.C. 112(f):

> (f) Element in Claim for a Combination. – An element in a claim for a combination may be expressed as a means or step for performing a specified function without the recital of structure, material, or acts in support thereof, and such claim shall be construed to cover the corresponding structure, material, or acts described in the specification and equivalents thereof.

The following is a quotation of pre-AIA 35 U.S.C. 112, sixth paragraph:

> An element in a claim for a combination may be expressed as a means or step for performing a specified function without the recital of structure, material, or acts in support thereof, and such claim shall be construed to cover the corresponding structure, material, or acts described in the specification and equivalents thereof.

Use of the word "means" (or "step for") in a claim with functional language creates a rebuttable presumption that the claim element is to be treated in accordance with 35 U.S.C. 112(f) (pre-AIA 35 U.S.C. 112, sixth paragraph). The presumption that 35 U.S.C. 112(f) (pre-AIA 35 U.S.C. 112, sixth paragraph) is invoked is rebutted when the function is recited with sufficient structure, material, or acts within the claim itself to entirely perform the recited function.

Absence of the word "means" (or "step for") in a claim creates a rebuttable presumption that the claim element is not to be treated in accordance with 35 U.S.C. 112(f) (pre-AIA 35 U.S.C. 112, sixth paragraph). The presumption that 35 U.S.C. 112(f) (pre-AIA 35 U.S.C. 112, sixth paragraph) is not invoked is rebutted when the claim element recites function but fails to recite sufficiently definite structure, material or acts to perform that function.

Claim elements in this application that use the word "means" (or "step for") are presumed to invoke 35 U.S.C. 112(f) except as otherwise indicated in an Office action. Similarly, claim elements that do not use the word "means" (or "step for") are presumed not to invoke 35 U.S.C. 112(f) except as otherwise indicated in an Office action.

Claim Rejections - 35 USC § 103

5. In the event the determination of the status of the application as subject to AIA 35 U.S.C. 102 and 103 (or as subject to pre-AIA 35 U.S.C. 102 and 103) is incorrect, any correction of the statutory basis for the rejection will not be considered a new ground of rejection if the prior art relied upon, and the rationale supporting the rejection, would be the same under either status.

6. The following is a quotation of pre-AIA 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

> (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

7. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under pre-AIA 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.

2. Ascertaining the differences between the prior art and the claims at issue.

3. Resolving the level of ordinary skill in the pertinent art.

4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

8. Claims 1, 5, 7-10, 12, 18-21, and 23 are rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Publication No. 2002/0161685 (Dwinnell) in view of U.S. Patent Publication No. 2002/0018399 (Schultz) and further in view of U.S. Patent Publication No. 2003/0052180 (Huhn).

Claim 1:

Dwinnell describes a hosted, web-based, remote industrial monitoring and control system for geographically distributed facilities in oil and gas fields, the system comprising: **(Dwinnell: "Embodiments of the present invention as disclosed collect live productivity data and streaming media information broadcast from remote sites of interest (such as oil and gas drilling locations, construction sites, etc.) in real-time into a collection and distribution network that delivers this data and information to investors and managers via the Internet via a dynamic web page interface." abstract)**

- a computer-implemented datastore storing: **(Dwinnell: see the database system 303 of the central system 102 as illustrated in figure 3 and as described in paragraph 0057)**
    - a plurality of accounts, each account corresponding to an entity operating one or more geographically distributed oil or gas facilities, the accounts associating different oil or gas facilities with different entities; and **(Dwinnell: see the accounts and the various ventures and wells as described in paragraphs**

0057, 0067, 0068 and as illustrated in figures 6A, 6B; "Retrieval by web site users (investors and managers) of information and data stored in the archive system 302 or the database system 303 is controlled by standard authentication and authorization protocols. Users sign up for access to certain restricted features of the dynamic web site and receive a username and password to access desired information. Once a user has received an account, he is able to login into various otherwise-restricted web pages and thus be presented with a dynamically generated web page representative of the level of access that the user's particular account possesses." Paragraph 0057)

- a computer-implemented facility-interface module or modules configured to **(Dwinnell: see the central collection and distribution system 102 as illustrated in figures 1, 3 and as described in paragraph 0031)**
    - obtain data from the sensors at the facilities and **(Dwinnell: "Each remote site system 101 gathers information and data from a particular remote site (i.e., an oil and gas drilling site or rig) and transmits the information and data to a central collection and distribution system 102 at least partially in the form of streaming media, and preferably digital streaming video." Paragraph 0031)**
- a computer-implemented web-interface module or modules configured to **(Dwinnell: see the web platform system 305 of the central system 102 as illustrated in figure 3 and as described in paragraphs 0051, 0054)**

- send instructions to present control interfaces in web browsers executing on user computing devices logged in to the accounts and to **(Dwinnell: see the interfaces in web browsers along with delivered data from the web-server to the web browser as illustrated in figures 4, 5, 6A, 6B and as described in paragraphs 0063, 0064, 0065, 0066)**

Dwinnell does not explicitly describe sending commands as described below. However, Schultz teaches the sending commands as described below.

- send commands to the actuators at the facilities via the cellular network connections; and **(see the sending of commands to actuators in Schultz and the use of a cellular network in Dwinnell; Schultz: "In addition, a corresponding one of the actuators 88, 90, 92 may be controlled via the respective web page to operate the associated device 80 or 82. Thus, in the system 68, a person with a connection to the Internet 102 at a remote location may, for example, monitor a pressure drop across or a flow rate through the device 80 and, based on this information, operate the actuator 88 to adjust the pressure drop or flow rate, or to close the device, as desired." Paragraph 0048; Dwinnell: "The remote site system 101 further includes a remote site transmission device 203 for connecting to and sending streaming media information and other data to the central system 102. Preferably, the transmission device 203 should be capable of 64 Kb/s or greater telecommunication bandwidth and can comprise a cellular or land-line high**

speed modem, microwave, ADSL, ISDN line, LAN/WAN, etc., and most preferably comprises a portable VSAT satellite receiver/transmitter and antenna." Paragraph 0044))

- receive commands to control actuators from the user computing devices, **(Schultz: "In addition, a corresponding one of the actuators 88, 90, 92 may be controlled via the respective web page to operate the associated device 80 or 82. Thus, in the system 68, a person with a connection to the Internet 102 at a remote location may, for example, monitor a pressure drop across or a flow rate through the device 80 and, based on this information, operate the actuator 88 to adjust the pressure drop or flow rate, or to close the device, as desired." Paragraph 0048)**

- wherein the system is configured to
  - receive, with the web-interface module or modules, a user command to actuate an actuator entered via a presented control interface, **(Schultz: "In addition, a corresponding one of the actuators 88, 90, 92 may be controlled via the respective web page to operate the associated device 80 or 82. Thus, in the system 68, a person with a connection to the Internet 102 at a remote location may, for example, monitor a pressure drop across or a flow rate through the device 80 and, based on this information, operate the actuator 88 to adjust the pressure drop or flow rate, or to close the device, as desired." Paragraph 0048)**

- send instructions with the facility-interface module or modules to the facility to actuate the actuator. **(Schultz: "In addition, a corresponding one of the actuators 88, 90, 92 may be controlled via the respective web page to operate the associated device 80 or 82. Thus, in the system 68, a person with a connection to the Internet 102 at a remote location may, for example, monitor a pressure drop across or a flow rate through the device 80 and, based on this information, operate the actuator 88 to adjust the pressure drop or flow rate, or to close the device, as desired." Paragraph 0048)**

One of ordinary skill in the art would have recognized that applying the known technique of Dwinnell, namely, a web based interface for oil and gas drilling location information, with the known techniques of Schultz, namely, a web server based interface for oil well information and control, would have yielded predictable results and resulted in an improved system. Accordingly, applying the teachings of Dwinnell to provide a web interface for remote viewing of information about oil wells with the teachings of Schultz to use a web interface to view information and control devices in oil wells would have been recognized by those of ordinary skill in the art as resulting in an improved monitoring and control system (i.e., remote monitoring and control of oil wells of Dwinnell based on the teachings of remote control of oil wells in Schultz).

Dwinnell and Schultz do not explicitly describe network addresses as described below. However, Huhn teaches the network addresses as described below.

- network addresses by which industrial monitoring or control equipment at the facilities is accessible via cellular network connections, the monitoring or control equipment including sensors or actuators; **(see the stored network addresses for actuators in Huhn and the cell network communication in Dwinnell; Huhn: see the store address to eeprom 330 as illustrated in figure 9; "In accordance with a preferred embodiment of the present invention, the address for an actuator is stored in the EEPROM 130. As mentioned, each of the actuators of the system are identical." Paragraph 0042; Dwinnell: "The remote site system 101 further includes a remote site transmission device 203 for connecting to and sending streaming media information and other data to the central system 102. Preferably, the transmission device 203 should be capable of 64 Kb/s or greater telecommunication bandwidth and can comprise a cellular or land-line high speed modem, microwave, ADSL, ISDN line, LAN/WAN, etc., and most preferably comprises a portable VSAT satellite receiver/transmitter and antenna." Paragraph 0044)**
- identify a network address in the datastore corresponding to a facility at which the actuator is located, and **(Huhn: see the find address in look-up table 328 as illustrated in figure 9; "An address from the stored desired addresses is selected (328) from the look-up table of all addresses of the mounted actuator in response to the at least one operating parameter (316, 324, 326)." Abstract; "Each of the actuators 50-54 have an associated address. When the HVAC controller 30 wants to command one of the actuators to move that**

actuator's associated conduit door, it transmits a two part serial communication signal on the command line 64 connected to all actuators. The first part of the serial communication is an actuator address for that actuator to be commanded. The second part of the serial communication is the command to further open or further close the conduit door. All other actuators ignore the command when the address portion of the serial communication does not match its stored address." Paragraph 0041)

One of ordinary skill in the art would have recognized that applying the known technique of Dwinnell, namely, a web based interface for oil and gas drilling location information, and the known techniques of Schultz, namely, a web server based interface for oil well information and control, with the teachings of Huhn, namely, using addresses to control actuators in a process control system, would have yielded predictable results and resulted in an improved system. Accordingly, applying the teachings of Dwinnell to provide a web interface for remote viewing of information about oil wells and the teachings of Schultz to use a web interface to view information and control devices in oil wells with the teachings of Huhn to control actuators using addresses would have been recognized by those of ordinary skill in the art as resulting in an improved monitoring and control system (i.e., remote monitoring and control of oil wells using actuator addressing of Dwinnell based on the teachings of remote control of oil wells in Schultz and the teachings of controlling actuators using addressing in Huhn).

Claim 5:

Dwinnell describes the system of claim 1, wherein:

- the web-interface module or modules comprises a web server; and **(Dwinnell: "The web platform system 305, comprising one or more web servers, communicates directly with each user's computer (running a web browser application) via the Internet and retrieves and serves, in a suitable hardware independent page description language (such as HTML, XML, and java), requested data from the database system 303, live streaming broadcasts and associated data from the broadcast system 304, and archived streams and associated data from the archive system 302." Paragraph 0054; see the web platform system 305 of the central system 102 as illustrated in figure 3 and as described in paragraphs 0051, 0054)**
- the facility-interface module or modules comprises a site server distinct from the web server. **(Dwinnell: "Incoming streamed media is received by the central system transmission device 103 and sent directly to the collection system 301 where it is identified." Paragraph 0052; "Each of the systems 301-305 that comprise the central system 102 are composed of suitable servers, storage devices (including databases), memory devices and support hardware as is known in the art of computer networks to achieve the functions of each system 301-305." Paragraph 0051)**

Claim 7:

Dwinnell describes the system of claim 1, wherein: the data store stores subscription information associated with at least some of the accounts. **(Dwinnell: see the accounts and the various ventures and wells as described in paragraphs 0057, 0067, 0068 and as illustrated in figures 6A, 6B; "Retrieval by web site users (investors and managers) of information and**

data stored in the archive system 302 or the database system 303 is controlled by standard authentication and authorization protocols. Users sign up for access to certain restricted features of the dynamic web site and receive a username and password to access desired information. Once a user has received an account, he is able to login into various otherwise-restricted web pages and thus be presented with a dynamically generated web page representative of the level of access that the user's particular account possesses." Paragraph 0057)

Claim 8:

Dwinnell describes the system of claim 1, wherein the facility-interface module or modules comprise: means for interfacing with a plurality of site controllers associated with the facilities. **(Dwinnell: see the central system transmission device 103 interfacing with the remote site systems 101 as illustrated in figure 1 and as described in paragraph 0034; "First, a continuous stream is sent from each remote site system 101 to the central collection and distribution system 102 via the central system transmission device 103 (such as a high speed modem, LAN, WAN or VSAT satellite transmitter/receiver)." Paragraph 0034)**

Claim 9:

Dwinnell describes the system of claim 1, wherein the web-interface module or modules comprise: means for sending instructions to present a control interface on the user devices. **(Dwinnell: see the interfaces in web browsers along with delivered data from the web-**

server to the web browser as illustrated in figures 4, 5, 6A, 6B and as described in paragraphs 0063, 0064, 0065, 0066)

Claim 10:

Dwinnell describes the system of claim 1,

- wherein the datastore stores accounts for more than one hundred facilities, and **(Dwinnell: "As is apparent from FIG. 1, the network 100 can be expanded or contracted to include any number of remote site systems 101 or investors/managers 105 as is necessitated." Paragraph 0031)**
- the web-interface module or modules are configured interface with more than one hundred user devices. **(Dwinnell: "As is apparent from FIG. 1, the network 100 can be expanded or contracted to include any number of remote site systems 101 or investors/managers 105 as is necessitated." Paragraph 0031)**

Claim 12:

Dwinnell describes the system of claim 1, comprising: a controller at one of the facilities communicatively coupled to an actuator or a sensor. **(Dwinnell: "The remote site system 101 comprises a remote site video and data capture server 202 (hereinafter referred to as a remote site capture server 202 or "RSCS 202") in electronic communication with a plurality of cameras 205 positioned strategically about the remote site." Paragraph 0039)**

Claim 18:

Dwinnell describes the system of claim 12, comprising: means for ensuring at least some data is not lost if network access ceases intermittently. **(Dwinnell: "Preferably, the remote site system 101 also includes a storage medium (not explicitly shown in FIG. 2) for archiving a local copy of said collected data and streams such that such information and data will not be permanently lost in the case oc communication problems with the central system 100." Paragraph 0044)**

Claim 19:

Dwinnell does not explicitly describe translating a command as described below. However, Schultz teaches the translating a command as described below.

Dwinnell and Schultz describe the system of claim 12, comprising: means for translating a command for an actuator from an input format to a format configured to effectuate changes in the actuator. **(Schultz: see the converter 26 converting optical signals into electrical signals for control of an actuator as illustrated in figures 1, 2 and as described in paragraphs 0032, 0042; "Accordingly, the well tool 10 includes a converter 26 for converting electrical signals generated by the webserver 22 into optical signals for transmission via the fiber optic line(s) of the cable 24." Paragraph 0032; "In a described embodiment, a well tool includes a webserver connected to a sensor and an actuator of the tool." Abstract; "The actuators 88, 90, 92 maybe electrically, hydraulically or otherwise operated." Paragraph 0042)**

Dwinnell and Schultz are combinable for the same rationale as set forth above with respect to claim 1.

Claim 20:

Dwinnell does not explicitly describe executing control routines as described below. However, Schultz teaches the executing control routines as described below.

Dwinnell and Schultz describe the system of claim 19, comprising: means for executing control routines implicated by translated commands on an individual actuator or sensor. **(Schultz: see the converter 26 converting optical signals into electrical signals for control of an actuator as illustrated in figures 1, 2 and as described in paragraphs 0032, 0042; "Accordingly, the well tool 10 includes a converter 26 for converting electrical signals generated by the webserver 22 into optical signals for transmission via the fiber optic line(s) of the cable 24." Paragraph 0032; "In a described embodiment, a well tool includes a webserver connected to a sensor and an actuator of the tool." Abstract; "The actuators 88, 90, 92 maybe electrically, hydraulically or otherwise operated." Paragraph 0042; "In addition, a corresponding one of the actuators 88, 90, 92 may be controlled via the respective web page to operate the associated device 80 or 82. Thus, in the system 68, a person with a connection to the Internet 102 at a remote location may, for example, monitor a pressure drop across or a flow rate through the device 80 and, based on this information, operate the actuator 88 to adjust the pressure drop or flow rate, or to close the device, as desired." Paragraph 0048)**

Dwinnell and Schultz are combinable for the same rationale as set forth above with respect to claim 1.

Claim 21:

Dwinnell describes the system of claim 12, comprising: means for transmitting data to the facility-interface module or modules. **(Dwinnell: "Each remote site system 101 gathers information and data from a particular remote site (i.e., an oil and gas drilling site or rig) and transmits the information and data to a central collection and distribution system 102 at least partially in the form of streaming media, and preferably digital streaming video." Paragraph 0031)**

Claim 23:

Dwinnell describes the system of claim 12, comprising: an oil or gas facility communicatively coupled to the controller. **(Dwinnell: "Embodiments of the present invention as disclosed collect live productivity data and streaming media information broadcast from remote sites of interest (such as oil and gas drilling locations, construction sites, etc.) in real-time into a collection and distribution network that delivers this data and information to investors and managers via the Internet via a dynamic web page interface." abstract)**

9. Claims 2, 11, and 17 are rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Publication No. 2002/0161685 (Dwinnell) in view of U.S. Patent Publication No. 2002/0018399 (Schultz) and further in view of U.S.

Patent Publication No. 2003/0052180 (Huhn) and U.S. Patent No. 6,967,589 (Peters).

Claim 2:

Dwinnell, Schultz, and Huhn do not explicitly describe tank sensors as described below. However, Peters teaches the tank sensors as described below.

Dwinnell, Schultz, Huhn, and Peters describe the system of claim 1,

- wherein the sensors include a tank level sensor of a tank at one of the facilities, and **(Peters: "Monitoring unit 120, connected to oil tank 95, measures the pressure at the bottom of the tank. With that information, as well as the diameter of the oil tank 95 and the specific gravity of the oil in the oil tank 95, the amount of oil in oil tank 95 can be determined by a formula as is known to those of skill in the art. Likewise, monitoring unit 130, connected to water tank 98, measures the pressure at the bottom of water tank 98. With that information, as well as the diameter of the water tank 98 and the specific gravity of water, the amount of water in water tank 98 can be determined by a formula as is known to those of skill in the art. In each case, additional sensors can be used, e.g., trip level sensors in the tanks. Other methods of measuring can be used, such as, infrared, microwave and float sensors." Col. 5, line 61 through col. 6, line 7)**
- wherein the datastore includes a record associating the tank with the facility, **(see the tanks in Peters and the association of ventures to wells in Dwinnell; Peters: see the**

tanks 95, 98 as illustrated in figure 1; Dwinnell: see the ventures (i.e., facility) and the associated wells (i.e., equipment) as illustrated in figure 6A and as described in paragraph 0067)

- data from the tank being unavailable to users without an account associated with the tank. **(see the tanks in Peters and the availability and unavailability of data for accounts in Dwinnell; Peters: see the tanks 95, 98 as illustrated in figure 1; Dwinnell: see the accounts and the various ventures and wells as described in paragraphs 0057, 0067, 0068 and as illustrated in figures 6A, 6B; "Retrieval by web site users (investors and managers) of information and data stored in the archive system 302 or the database system 303 is controlled by standard authentication and authorization protocols. Users sign up for access to certain restricted features of the dynamic web site and receive a username and password to access desired information. Once a user has received an account, he is able to login into various otherwise-restricted web pages and thus be presented with a dynamically generated web page representative of the level of access that the user's particular account possesses." Paragraph 0057)**

One of ordinary skill in the art would have recognized that applying the known technique of Dwinnell, namely, a web based interface for oil and gas drilling location information, the known techniques of Schultz, namely, a web server based interface for oil well information and control, and the teachings of Huhn, namely, using addresses to control actuators in a process control system, with the teachings of Peters, namely, monitoring a gas/oil well, would have yielded predictable results and resulted in an improved system. Accordingly, applying the teachings of Dwinnell to provide a web interface for remote viewing of information about oil wells, the

teachings of Schultz to use a web interface to view information and control devices in oil wells, and the teachings of Huhn to control actuators using addresses with the teachings of Peters to use tank sensors to monitor a gas/oil well would have been recognized by those of ordinary skill in the art as resulting in an improved monitoring and control system (i.e., remote monitoring using sensors and control of oil wells using actuator addressing of Dwinnell based on the teachings of remote control of oil wells in Schultz, the teachings of controlling actuators using addressing in Huhn, and the teachings of monitoring an oil/gas well with tank sensors in Peters).

Claim 11:

Dwinnell, Schultz, and Huhn do not explicitly describe pull requests as described below. However, Peters teaches the pull requests as described below.

Dwinnell, Schultz, Huhn, and Peters describe the system of claim 1, wherein the facility-interface module or modules are configured to send pull requests to facilities to retrieve data buffered at the facilities. **(Peters: "Relay unit 140 can query each, some or all of the monitoring units 100, 110, 120 and 130 or receive data and requests from each, some or all of them." Col. 6, lines 32-35)**

Dwinnell, Schultz, Huhn, and Peters are combinable for the same rationale as set forth above with respect to claim 2.

Claim 17:

Dwinnell, Schultz, and Huhn do not explicitly describe pushes as described below. However, Peters teaches the pushes as described below.

Dwinnell, Schultz, Huhn, and Peters describe the system of claim 12, wherein controller is configured to periodically push buffered data to the facility-interface module or modules. **(Peters: "Relay units may be configured to do any of these "wake ups" and to alter their alarm time intervals. This allows given periods for daily data dumps from monitoring units to the host interface 200 via the relay unit 240 and/or host interface 200 queries to monitoring units via the relay unit 240, both at any time interval. Preferably, the default setting for the relay unit 240 is to commence data dumps to the host interface at twelve (12) AM (midnight) each day and to wake up and await for host interface queries every 30 minutes for 2 minutes." Col. 10, lines 30-39)**

Dwinnell, Schultz, Huhn, and Peters are combinable for the same rationale as set forth above with respect to claim 2.

10. Claim 3 is rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Publication No. 2002/0161685 (Dwinnell) in view of U.S. Patent Publication No. 2002/0018399 (Schultz) and further in view of U.S. Patent Publication No. 2003/0052180 (Huhn) and U.S. Patent No. 5,149,443 (Varnam).

Claim 3:

Dwinnell, Schultz, and Huhn do not explicitly describe oil/water sensors as described below. However, Varnam teaches the oil/water sensors as described below.

Dwinnell, Schultz, Huhn, and Peters describe the system of claim 1,

- wherein the sensors include a level sensor of an oil/water separation tank at one of the facilities configured to indicate a level at which oil meets water, and **(Varnam: "Also mounted on the floating arms 50 and 52 is at least one acoustical type oil layer thickness sensor 158. Sensor 158 acts to sense and determine the thickness of the oil layer lying within the defined oil collection area 54." Col. 6, lines 4-8)**
- wherein the datastore includes a record associating the tank with the facility. **(see the tanks in Varnam and the association of ventures to wells in Dwinnell; Varnam: see the tanks 200 as illustrated in figure 1; Dwinnell: see the ventures (i.e., facility) and the associated wells (i.e., equipment) as illustrated in figure 6A and as described in paragraph 0067)**

One of ordinary skill in the art would have recognized that applying the known technique of Dwinnell, namely, a web based interface for oil and gas drilling location information, the known techniques of Schultz, namely, a web server based interface for oil well information and control, and the teachings of Huhn, namely, using addresses to control actuators in a process control system, with the teachings of Varnam, namely, an oil recovery system with an oil/water sensor, would have yielded predictable results and resulted in an improved system. Accordingly, applying the teachings of Dwinnell to provide a web interface for remote viewing of information about oil wells, the teachings of Schultz to use a web interface to view information and control devices in oil wells, and the teachings of Huhn to control actuators using addresses with the

teachings of Varnam to use an oil/water sensor would have been recognized by those of ordinary skill in the art as resulting in an improved monitoring and control system (i.e., remote monitoring using various sensors and control of oil wells using actuator addressing of Dwinnell based on the teachings of remote control of oil wells in Schultz, the teachings of controlling actuators using addressing in Huhn, and the teachings of using an oil/water sensor in Varnam).

11. Claim 4 is rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Publication No. 2002/0161685 (Dwinnell) in view of U.S. Patent Publication No. 2002/0018399 (Schultz) and further in view of U.S. Patent Publication No. 2003/0052180 (Huhn) and U.S. Patent No. 7,967,066 (McStay).

Claim 4:

Dwinnell, Schultz, and Huhn do not explicitly describe a leak detector as described below. However, McStay teaches the leak detector as described below.

Dwinnell, Schultz, Huhn, and McStay describe the system of claim 1,

- wherein the sensors include a leak detector at one of the facilities, and **(McStay: see the leak detection sensors 320 as illustrated in figure 3)**
- wherein the datastore includes a record associating the leak detector with the facility. **(see the leak detector in McStay and the association of ventures to wells in Dwinnell;**

McStay: see the leak detection sensors 320 as illustrated in figure 3; Dwinnell: see the ventures (i.e., facility) and the associated wells (i.e., equipment) as illustrated in figure 6A and as described in paragraph 0067)

One of ordinary skill in the art would have recognized that applying the known technique of Dwinnell, namely, a web based interface for oil and gas drilling location information, the known techniques of Schultz, namely, a web server based interface for oil well information and control, and the teachings of Huhn, namely, using addresses to control actuators in a process control system, with the teachings of McStay, namely, leak detection in an oil well, would have yielded predictable results and resulted in an improved system. Accordingly, applying the teachings of Dwinnell to provide a web interface for remote viewing of information about oil wells, the teachings of Schultz to use a web interface to view information and control devices in oil wells, and the teachings of Huhn to control actuators using addresses with the teachings of McStay to use a leak detection sensor in an oil well would have been recognized by those of ordinary skill in the art as resulting in an improved monitoring and control system (i.e., remote monitoring using various sensors and control of oil wells using actuator addressing of Dwinnell based on the teachings of remote control of oil wells in Schultz, the teachings of controlling actuators using addressing in Huhn, and the teachings of using a leak detector in an oil well in McStay).

12. Claims 6 and 15 are rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Publication No. 2002/0161685 (Dwinnell) in view of

U.S. Patent Publication No. 2002/0018399 (Schultz) and further in view of U.S. Patent Publication No. 2003/0052180 (Huhn) and U.S. Patent Publication No. 2002/0156837 (Batke).

Claim 6:

Dwinnell, Schultz, and Huhn do not explicitly describe two ports as described below. However, Batke teaches the two ports as described below.

Dwinnell, Schultz, Huhn, and Batke describe the system of claim 5, wherein:

- the web server communicates with user devices via a first network port of a computing device executing the web server; and **(Batke: see the web server communication by the web access interface 30 via the internet interface 32 (i.e., first network port) as illustrated in figure 1 and as described in paragraph 0020; "Referring to FIG. 1, a new industrial control system 100 used to control an industrial process includes a web access interface 30 that is coupled to one or more control devices, which are shown as control devices 110, 120, 130 and 140. The web access interface 30 is capable of communications with one or more remote computer terminals or other remote devices 10 by way of the Internet or World Wide Web (or simply the "web") by way of an Internet interface 32. The web access interface 30 is also coupled to the control devices 110-140 by way of a control network interface 62 having one or more ports, which in this exemplary embodiment are shown to include a first port**

60 and a second port 70. Communication links 80 in turn couple the network interface 62 with the control devices 110-140." Paragraph 0020)

- the site server communicates with facilities via a second network port of the computing device, the second network port being different from the first network port. **(Batke: see the control device 110-140 communication by the web access interface 30 via the control network interface 62 (i.e., second network port) as illustrated in figure 1 and as described in paragraph 0020; "Referring to FIG. 1, a new industrial control system 100 used to control an industrial process includes a web access interface 30 that is coupled to one or more control devices, which are shown as control devices 110, 120, 130 and 140. The web access interface 30 is capable of communications with one or more remote computer terminals or other remote devices 10 by way of the Internet or World Wide Web (or simply the "web") by way of an Internet interface 32. The web access interface 30 is also coupled to the control devices 110-140 by way of a control network interface 62 having one or more ports, which in this exemplary embodiment are shown to include a first port 60 and a second port 70. Communication links 80 in turn couple the network interface 62 with the control devices 110-140." Paragraph 0020)**

One of ordinary skill in the art would have recognized that applying the known technique of Dwinnell, namely, a web based interface for oil and gas drilling location information, the known techniques of Schultz, namely, a web server based interface for oil well information and control, and the teachings of Huhn, namely, using addresses to control actuators in a process control system, with the teachings of Batke, namely, a process control system with a web server, would

have yielded predictable results and resulted in an improved system. Accordingly, applying the teachings of Dwinnell to provide a web interface for remote viewing of information about oil wells, the teachings of Schultz to use a web interface to view information and control devices in oil wells, and the teachings of Huhn to control actuators using addresses with the teachings of Batke to have various network configurations for the control device in the control system would have been recognized by those of ordinary skill in the art as resulting in an improved monitoring and control system (i.e., remote monitoring and control of oil wells using actuator addressing and various ports for communication of Dwinnell based on the teachings of remote control of oil wells in Schultz, the teachings of controlling actuators using addressing in Huhn, and the teachings of multiple ports for communication within the process control system in Batke).

Claim 15:

Dwinnell, Schultz, and Huhn do not explicitly describe a private network as described below. However, Batke teaches the private network as described below.

Dwinnell, Schultz, Huhn, and Batke describe the system of claim 12, wherein the controller is communicatively coupled to the actuator or sensor via a private local area network. **(Batke: see the communication links 80 between the web access interface 30 and the control devices 110-140 as illustrated in figure 1 and as described in paragraphs 0020, 0029, 0031; "The communication links 80 can be wire cable, fiber optic or wireless, and are typically a proprietary or specialized network suitable for industrial control." Paragraph 0020)**

Dwinnell, Schultz, Huhn, and Batke are combinable for the same rationale as set forth above with respect to claim 6.

13. Claims 13-14 are rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Publication No. 2002/0161685 (Dwinnell) in view of U.S. Patent Publication No. 2002/0018399 (Schultz) and further in view of U.S. Patent Publication No. 2003/0052180 (Huhn) and U.S. Patent Publication No. 2005/0084988 (Huang).

Claim 13:

Dwinnell, Schultz, and Huhn do not explicitly describe threads as described below. However, Huang teaches the threads as described below.

Dwinnell, Schultz, Huhn, and Huang describe the system of claim 12, comprising at least four of the following as distinct threads from one another:

- a thread configured to sends and receive data requests; **(Huang: see the trace data collection tread receiving start/stop triggered by events from the machine control thread and sending trace data to the trace data store as illustrated in figure 5; "For the status data path 506, an independently executing thread obtains all sensor and/or actuator data from the various I/O module controllers to be passed along to user interface module 508 for display." Paragraph 0075)**

- a thread configured to synchronize other threads with updated information; **(Huang: see the trace data report thread updating the status data collection thread with data from the trace data store and the event driven data as illustrated in figure 5 and as described in paragraph 0076)**
- a thread configured to set a target state of actuators; **(Huang: see the machine control thread as illustrated in figure 5; "In one embodiment, the execution thread for collecting the trace data may have a higher priority even than the control thread that controls the actuators (which is also shown in FIG. 5)." Paragraph 0076)**
- a thread configured to obtain updated sensor readings; **(Huang: see the status data collection thread as illustrated in figure 5; "For the status data path 506, an independently executing thread obtains all sensor and/or actuator data from the various I/O module controllers to be passed along to user interface module 508 for display." Paragraph 0075)**
- a thread configured to process user interactions; and
- a thread that eliminates other threads upon detecting a problem with the eliminated threads.

One of ordinary skill in the art would have recognized that applying the known technique of Dwinnell, namely, a web based interface for oil and gas drilling location information, the known techniques of Schultz, namely, a web server based interface for oil well information and control, and the teachings of Huhn, namely, using addresses to control actuators in a process control system, with the teachings of Huang, namely, using various threads in a process control system, would have yielded predictable results and resulted in an improved system. Accordingly,

applying the teachings of Dwinnell to provide a web interface for remote viewing of information about oil wells, the teachings of Schultz to use a web interface to view information and control devices in oil wells, and the teachings of Huhn to control actuators using addresses with the teachings of Huang to use various threads in a process control system would have been recognized by those of ordinary skill in the art as resulting in an improved monitoring and control system (i.e., remote monitoring and control of oil wells using actuator addressing and various threads for control of Dwinnell based on the teachings of remote control of oil wells in Schultz, the teachings of controlling actuators using addressing in Huhn, and the teachings of using various threads for control in a process control system in Huang).

Claim 14:

Dwinnell, Schultz, and Huhn do not explicitly describe threads as described below. However, Huang teaches the threads as described below.

Dwinnell, Schultz, Huhn, and Huang describe the system of claim 12, comprising at least two of the following as distinct threads from one another:

- a thread configured to sends or receive data request; (**Huang: see the trace data collection tread receiving start/stop triggered by events from the machine control thread and sending trace data to the trace data store as illustrated in figure 5; "For the status data path 506, an independently executing thread obtains all sensor and/or actuator data from the various I/O module controllers to be passed along to user interface module 508 for display." Paragraph 0075)**

- a thread configured to synchronize other threads with updated information; **(Huang: see the trace data report thread updating the status data collection thread with data from the trace data store and the event driven data as illustrated in figure 5 and as described in paragraph 0076)**
- a thread configured to set a target state of actuators; **(Huang: see the machine control thread as illustrated in figure 5; "In one embodiment, the execution thread for collecting the trace data may have a higher priority even than the control thread that controls the actuators (which is also shown in FIG. 5)." Paragraph 0076)**
- a thread configured to obtain updated sensor readings; **(Huang: see the status data collection thread as illustrated in figure 5; "For the status data path 506, an independently executing thread obtains all sensor and/or actuator data from the various I/O module controllers to be passed along to user interface module 508 for display." Paragraph 0075)**
- a thread configured to process user interactions; and
- a thread that eliminates other threads upon detecting a problem with the eliminated threads.

Dwinnell, Schultz, Huhn, and Haung are combinable for the same rationale as set forth above with respect to claim 13.

14. Claim 16 is rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Publication No. 2002/0161685 (Dwinnell) in view of U.S. Patent Publication No. 2002/0018399 (Schultz) and further in view of U.S. Patent Publication No. 2003/0052180 (Huhn) and U.S. Patent Publication No. 2011/0051645 (Hong).

Claim 16:

Dwinnell, Schultz, and Huhn do not explicitly describe checking validity as described below. However, Hong teaches the checking validity as described below.

Dwinnell, Schultz, Huhn, and Hong describe the system of claim 12, wherein controller is communicatively coupled to the actuator or sensor via a frame-based carrier-sense multiple access protocol with collision detection. **(see the controller in Dwinnell and the CSMA communication in Hong; Hong: "The node sensed collision and the nodes transmitted signals to the node sensed collision transmit data packets using a Carrier Sense Multiple Access with Collision Avoidance (CSMA/CA) technique, which uses RTS/CTS for avoiding collision. Therefore, the nodes transmitted the signals check if the signals they transmitted collide in the upper node through a signal overhearing period. When a collision signal is detected, the nodes perform a channel allocation operation using the RTS/CTS packet in the data transmission period." Paragraph 0083; Dwinnell: "The remote site system 101 comprises a remote site video and data capture server 202 (hereinafter referred to as a**

remote site capture server 202 or "RSCS 202") in electronic communication with a plurality of cameras 205 positioned strategically about the remote site." Paragraph 0039)

One of ordinary skill in the art would have recognized that applying the known technique of Dwinnell, namely, a web based interface for oil and gas drilling location information, the known techniques of Schultz, namely, a web server based interface for oil well information and control, and the teachings of Huhn, namely, using addresses to control actuators in a process control system, with the teachings of Hong ,namely, using various communication techniques in a sensor network, would have yielded predictable results and resulted in an improved system. Accordingly, applying the teachings of Dwinnell to provide a web interface for remote viewing of information about oil wells, the teachings of Schultz to use a web interface to view information and control devices in oil wells, and the teachings of Huhn to control actuators using addresses with the teachings of using various communication techniques in a sensor network to Hong would have been recognized by those of ordinary skill in the art as resulting in an improved monitoring and control system (i.e., remote monitoring and control of oil wells using actuator addressing and various communication techniques of Dwinnell based on the teachings of remote control of oil wells in Schultz, the teachings of controlling actuators using addressing in Huhn, and the teachings of using CSMA by sensors in Hong).

15. Claim 22 is rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Publication No. 2002/0161685 (Dwinnell) in view of U.S. Patent

Publication No. 2002/0018399 (Schultz) and further in view of U.S. Patent Publication No. 2003/0052180 (Huhn) and U.S. Patent No. 4,052,703 (Collins).

Claim 22:

Dwinnell, Schultz, and Huhn do not explicitly describe checking validity as described below. However, Collins teaches the checking validity as described below.

Dwinnell, Schultz, Huhn, and Collins describe the system of claim 12, comprising: means for checking validity of a command. **(Collins: "A further object of the invention is to provide a control system capable of determining the validity of a message received over a cable without having to re-transmit the message to the remote control station." Col. 3, lines 65-68; "In this case, the answer being "no", another diamond 106 asks the question whether or not the instruction is a valid command for operation in the automatic mode. If the answer is "yes", the instruction signal is sent to block 107. The tests required in the various diamond or test functions employed in the logic control system of the present invention may be performed using a data masking technique or a "rotate right" technique or any other logical operation for determining the content or validity of a logical signal." Col. 11, lines 21-30)**

One of ordinary skill in the art would have recognized that applying the known technique of Dwinnell, namely, a web based interface for oil and gas drilling location information, the known techniques of Schultz, namely, a web server based interface for oil well information and control, and the teachings of Huhn, namely, using addresses to control actuators in a process control

system, with the teachings of Collins, namely, validating commands for an oil well system, would have yielded predictable results and resulted in an improved system. Accordingly, applying the teachings of Dwinnell to provide a web interface for remote viewing of information about oil wells, the teachings of Schultz to use a web interface to view information and control devices in oil wells, and the teachings of Huhn to control actuators using addresses with the teachings of Collins to validate commands for devices within an oil well would have been recognized by those of ordinary skill in the art as resulting in an improved monitoring and control system (i.e., remote monitoring and control of oil wells using actuator addressing and validation of control of Dwinnell based on the teachings of remote control of oil wells in Schultz, the teachings of controlling actuators using addressing in Huhn, and the teachings of validating control instructions for underwater oil installations in Collins).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher E. Everett whose telephone number is (571)272-2851. The examiner can normally be reached on Monday through Friday from 8:00 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kenneth Lo can be reached on 571-272-9774. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

Title:REMOTE CONTROL OF FLUID-HANDLING DEVICES

Publication No.US-2016-0109871-A1
Publication Date:04/21/2016

NOTICE OF PUBLICATION OF APPLICATION

The above-identified application will be electronically published as a patent application publication pursuant to 37 CFR 1.211, et seq. The patent application publication number and publication date are set forth above.

The publication may be accessed through the USPTO's publically available Searchable Databases via the Internet at www.uspto.gov. The direct link to access the publication is currently http://www.uspto.gov/patft/.

The publication process established by the Office does not provide for mailing a copy of the publication to applicant. A copy of the publication may be obtained from the Office upon payment of the appropriate fee set forth in 37 CFR 1.19(a)(1). Orders for copies of patent application publications are handled by the USPTO's Office of Public Records. The Office of Public Records can be reached by telephone at (703) 308-9726 or (800) 972-6382, by facsimile at (703) 305-8759, by mail addressed to the United States Patent and Trademark Office, Office of Public Records, Alexandria, VA 22313-1450 or via the Internet.

In addition, information on the status of the application, including the mailing date of Office actions and the dates of receipt of correspondence filed in the Office, may also be accessed via the Internet through the Patent Electronic Business Center at www.uspto.gov using the public side of the Patent Application Information and Retrieval (PAIR) system. The direct link to access this status information is currently http://pair.uspto.gov/. Prior to publication, such status information is confidential and may only be obtained by applicant using the private side of PAIR.

Further assistance in electronically accessing the publication, or about PAIR, is available by calling the Patent Electronic Business Center at 1-866-217-9197.

TRACK1.GRANT

Decision Granting Request for Prioritized Examination (Track I or After RCE)	Application No.:14/984,422

1. THE REQUEST FILED December 30, 2015 IS **GRANTED.**

The above-identified application has met the requirements for prioritized examination
- A. ☒ for an original nonprovisional application (Track I).
- B. ☐ for an application undergoing continued examination (RCE).

2. **The above-identified application will undergo prioritized examination.** The application will be accorded special status throughout its entire course of prosecution until one of the following occurs:

- A. filing a **petition for extension of time** to extend the time period for filing a reply;
- B. filing an **amendment to amend the application to contain more than four independent claims, more than thirty total claims**, or a multiple dependent claim;
- C. filing a **request for continued examination**;
- D. filing a notice of appeal;
- E. filing a request for suspension of action;
- F. mailing of a notice of allowance;
- G. mailing of a final Office action;
- H. completion of examination as defined in 37 CFR 41.102; or
- I. abandonment of the application.

Telephone inquiries with regard to this decision should be directed to Kimberly Inabinet at 571-272-4618.

FILING RECEIPT

OC000000079889848

Date Mailed: 01/14/2016

Receipt is acknowledged of this non-provisional patent application. The application will be taken up for examination in due course. Applicant will be notified as to the results of the examination. Any correspondence concerning the application must include the following identification information: the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. **If an error is noted on this Filing Receipt, please submit a written request for a Filing Receipt Correction. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the USPTO processes the reply to the Notice, the USPTO will generate another Filing Receipt incorporating the requested corrections**

Statement under 37 CFR 1.55 or 1.78 for AIA (First Inventor to File) Transition Applications: No

PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process **simplifies** the filing of patent applications on the same invention in member countries, but **does not result** in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at http://www.uspto.gov/web/offices/pac/doc/general/index.html.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, http://www.stopfakes.gov. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4258).

The Integration Group of The Americas Ex. 1004-Page 326
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

LICENSE FOR FOREIGN FILING UNDER

Title 35, United States Code, Section 184

Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign AssetsControl, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

SelectUSA

The United States represents the largest, most dynamic marketplace in the world and is an unparalleled location for business investment, innovation, and commercialization of new technologies. The U.S. offers tremendous resources and advantages for those who invest and manufacture goods here. Through SelectUSA, our nation works to promote and facilitate business investment. SelectUSA provides information assistance to the international investor community; serves as an ombudsman for existing and potential investors; advocates on behalf of U.S. cities, states, and regions competing for global investment; and counsels U.S. economic development organizations on investment attraction best practices. To learn more about why the United States is the best country in the world to develop technology, manufacture products, deliver services, and grow your business, visit http://www.SelectUSA.gov or call +1-202-482-6800.

CERTIFICATION AND REQUEST FOR PRIORITIZED EXAMINATION UNDER 37 CFR 1.102(e) (Page 1 of 1)

First Named Inventor:	Aaron Phillips	Nonprovisional Application Number (if known):	
Title of Invention:	REMOTE CONTROL OF FLUID-HANDLING DEVICES		

APPLICANT HEREBY CERTIFIES THE FOLLOWING AND REQUESTS PRIORITIZED EXAMINATION FOR THE ABOVE-IDENTIFIED APPLICATION.

1. The processing fee set forth in 37 CFR 1.17(i)(1) and the prioritized examination fee set forth in 37 CFR 1.17(c) have been filed with the request. The publication fee requirement is met because that fee, set forth in 37 CFR 1.18(d), is currently $0. The basic filing fee, search fee, and examination fee are filed with the request or have been already been paid. I understand that any required excess claims fees or application size fee must be paid for the application.

2. I understand that the application may not contain, or be amended to contain, more than four independent claims, more than thirty total claims, or any multiple dependent claims, and that any request for an extension of time will cause an outstanding Track I request to be dismissed.

3. The applicable box is checked below:

I. ☑ Original Application (Track One) - Prioritized Examination under § 1.102(e)(1)

i. (a) The application is an original nonprovisional utility application filed under 35 U.S.C. 111(a). This certification and request is being filed with the utility application via EFS-Web.

---OR---

(b) The application is an original nonprovisional plant application filed under 35 U.S.C. 111(a). This certification and request is being filed with the plant application in paper.

ii. An executed inventor's oath or declaration under 37 CFR 1.63 or 37 CFR 1.64 for each inventor, **or** the application data sheet meeting the conditions specified in 37 CFR 1.53(f)(3)(i) is filed with the application.

II. ☐ Request for Continued Examination - Prioritized Examination under § 1.102(e)(2)

i. A request for continued examination has been filed with, or prior to, this form.
ii. If the application is a utility application, this certification and request is being filed via EFS-Web.
iii. The application is an original nonprovisional utility application filed under 35 U.S.C. 111(a), or is a national stage entry under 35 U.S.C. 371.
iv. This certification and request is being filed prior to the mailing of a first Office action responsive to the request for continued examination.
v. No prior request for continued examination has been granted prioritized examination status under 37 CFR 1.102(e)(2).

Signature /Joshua Tucker/	Date December 30, 2015
Name (Print/Typed) Joshua Tucker	Practitioner Registration Number 63809

Note: *This form must be signed in accordance with 37 CFR 1.33. See 37 CFR 1.4(d) for signature requirements and certifications. Submit multiple forms if more than one signature is required.**

☑ *Total of 1 forms are submitted.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

PATENT APPLICATION

REMOTE CONTROL OF FLUID-HANDLING DEVICES

CROSS-REFERENCE TO RELATED APPLICATIONS

[001] The present application is a continuation of U.S. Patent Application 14/147,190, filed 03 January 2014, titled REMOTE CONTROL OF FLUID-HANDLING DEVICES, which is a continuation of U.S. Patent Application 13/708,557, issued as U.S. Patent 8,649,909, filed 07 December 2012, and titled REMOTE CONTROL OF FLUID-HANDLING DEVICES, the entire contents of each of which are hereby incorporated by reference for all purposes.

BACKGROUND OF THE INVENTION

1. Field of the Invention

[002] The present invention relates generally to fluid-handling devices and, more specifically, to remote control of fluid-handling devices.

2. Description of the Related Art

[003] Fluid-handling devices, such as valves, pumps, and various other forms of process equipment, in many use cases, are widely geographically distributed. For example, when such devices are used to extract petroleum products from an oil well, the associated fluid source or receptacle may be in a relatively remote location, as oil wells are generally distributed relative to one another and located remote from metropolitan areas. Similar issues arise in relation to petro-water disposal facilities, re-injection facilities, and petroleum pumping stations, all of which tend to be geographically distributed and include fluid-handling equipment.

[004] When monitoring or controlling such sites, it can be time-consuming and expensive for a technician to manually adjust or otherwise control fluid-handling devices, as the technician will incur costs and delays by traveling to the device to make adjustments or gather data in person.

The Integration Group of The Americas Ex. 1004-Page 332
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

And these adjustments and inspections often occur relatively frequently, as process conditions and market demand fluctuate, thereby further increasing costs.

[005] Some systems exist for exercising remote monitoring of fluid-handling devices, such as various supervisory control and data acquisition (SCADA) systems, but many of these systems fail when a network connection is lost. Remote logic controlling such systems generally ceases to exercise control when the remote logic is disconnected in the event of a network failure. Further, some SCADA systems require the installation of special-purpose software on a computing device in order to exercise control remotely, which tends to deter users from exercising remote control of fluid-handling devices due to the burden of configuring each computer from which remote control is exercised.

SUMMARY OF THE INVENTION

[006] The following is a non-exhaustive listing of some aspects of the present techniques. These and other aspects are described in the following disclosure.

[007] In some aspects, the present techniques include a system for remotely controlling fluid-handling device of an oil well, a petro water disposal or re-injection facility, or a petroleum pumping station, the system including: an input/output module operable to communicate with a fluid-handling device; a network interface; memory; and one or more processors communicatively coupled to the input/output module, the network interface, and the memory, wherein the memory stores instructions that when executed by the processors cause the processors to effectuate steps including: receiving, via the network interface, from a remote user device, a command to change a state of the fluid-handling device to a target state; translating the received command into a translated command operative to cause a local controller of the fluid-handling device to drive the fluid-handling equipment to the target state, the local controller being responsive to the command and feedback from the fluid-handling device indicative of whether the fluid-handling device is in the target state; and sending the translated command to the local controller..

[008] Some aspects include a tangible, non-transitory machine-readable medium storing instructions that when executed by a data processing apparatus cause the data processing

The Integration Group of The Americas Ex. 1004-Page 333
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

apparatus to perform operations including: receiving, via the network interface, from a remote user device, a command to change a state of the fluid-handling device to a target state; translating the received command into a translated command operative to cause a local controller of the fluid-handling device to drive the fluid-handling equipment to the target state, the local controller being responsive to the command and feedback from the fluid-handling device indicative of whether the fluid-handling device is in the target state; and sending the translated command to the local controller.

[009] Some aspects include a process, including: receiving, via the network interface, from a remote user device, a command to change a state of the fluid-handling device to a target state; translating the received command into a translated command operative to cause a local controller of the fluid-handling device to drive the fluid-handling equipment to the target state, the local controller being responsive to the command and feedback from the fluid-handling device indicative of whether the fluid-handling device is in the target state; and sending the translated command to the local controller.

BRIEF DESCRIPTION OF THE DRAWINGS

[0010] The above-mentioned aspects and other aspects of the present techniques will be better understood when the present application is read in view of the following figures in which like numbers indicate similar or identical elements:

[0011] Figure 1 illustrates an example of a command-center server and site master-controller in accordance with some embodiments;

[0012] Figure 2 illustrates an example of a process by which remote control of fluid-handling devices is exercised in accordance with some embodiments; and

[0013] Figure 3 illustrates an example of a computing device by which the hardware and processes of Figures 1 and 2 may be implemented.

[0014] While the invention is susceptible to various modifications and alternative forms, specific embodiments thereof are shown by way of example in the drawings and will herein be described in detail. The drawings may not be to scale. It should be understood, however, that the drawings

and detailed description thereto are not intended to limit the invention to the particular form disclosed, but to the contrary, the intention is to cover all modifications, equivalents, and alternatives falling within the spirit and scope of the present invention as defined by the appended claims.

DETAILED DESCRIPTION OF CERTAIN EMBODIMENTS

[0015] Figure 1 illustrates a computing environment 10 having a control system 12 that, in some implementations, addresses some or all of the above-mentioned deficiencies in certain SCADA systems for exercising remote control of fluid-handling devices. As explained in greater detail below, the control system 12 of this embodiment includes a command-center server 14 and site master-controllers 16 (specifically, in this example, three such site master-controllers 18, 20, and 22) that cooperate to facilitate remote control at a fluid-handling site 24 from user devices 26 or 28 via the Internet 30. Each site master-controller 16 may be co-located with a corresponding fluid-handling site 24 and, in some embodiments, may include logic that implements remotely issued commands, such that once a command is issued from user devices 26 or 28 and received at a site master-controller 16, the site master-controller 16, in some embodiments, executes the command to completion, even if Internet access is lost before the command is fully executed. Further, the site master-controller 16 of some embodiments may be operative to translate commands into various device-specific protocols, such that a single implementation of the site master-controller 16 is relatively versatile regardless of the type of fluid-handling device being controlled. And in some implementations, the command-center server 14 may be operative to present a command interface and receive commands via a web interface in a web browser on user devices 26 and 28, such that fluid-handling devices can be controlled remotely without the need to install special-purpose software on the computing device through which remote control is exercised. It should be noted, however, that not all embodiments provide all of these benefits, as various engineering and cost trade-offs are envisioned, and some embodiments may provide other or none of these benefits.

[0016] In some embodiments, the command-center server 14 includes a web server 32, a data store 34, and a site server 36. The command-center server 14 may act as a central node through which any of a plurality of user devices, such as user devices 26 and 28 (e.g., laptops, tablets,

The Integration Group of The Americas Ex. 1004-Page 335
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

desktop computers, smartphones, and the like), issue commands to any of a plurality site master-controller 16, provided that such access is authorized. Only two user devices and three site master-controllers are shown for simplicity of explanation, but implementations including substantially more of each are envisioned, such as more than several hundred or several thousand user devices and more than several hundred or several thousand site master-controllers, for example. That said, embodiments are also consistent with a single user device and a single site master-controller.

[0017] The illustrated web server 32 may be operative to send instructions to present a control interface on the user devices 26 and 28, for example in a web browser on an operating system executed by processors and stored by memory of the user devices 26 or 28. The web server 32 may be operative to receive a request for such an interface from one of the user devices 26 or 28, send instructions (for example HTML JavaScript, and cascading stylesheets) to the user devices 26 that when rendered in a browser of the user devices 26 or 28, presents the control interface. The control interface may include buttons, text-input fields, and the like, that when interacted with by a user (e.g., touching, clicking, keying in text, and the like) generated events handled by the control interface and which cause corresponding commands to be sent from the user devices 26 or 28 to the command-center server 14. Other embodiments may have a special-purpose application executing on the user devices 26 and 28 for presenting the control interface and sending commands to the command-center server 14, e.g., a smartphone app that communicates via a web-based application program interface. The command-center server may interact with the user devices 26 and 28 via an Internet Protocol (IP) address of the command-center server and a port, such as port 80, which may be different from a port by which the command-center server 14 communicates with the various site master-controller 16, as described below, to keep traffic from the different components separate.

[0018] The web server 32 may also be operative to send instructions to present reports, and interfaces by which such reports are selected, to the user devices 26 or 28 responsive to user requests for such information or interfaces. As explained in greater detail below, the site master-controller 16 may report various process data, and the web server 32 may present this process data to users upon request. This process data may be stored in the data store 34.

The Integration Group of The Americas Ex. 1004-Page 336
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

[0019] In the data store 34 of some embodiments, the site master-controllers 16 may be organized according to user accounts, with each site master-controller 16 corresponding to at least one user account and some user accounts corresponding to multiple site master-controllers 16, as some users may have, for example, a plurality of oil wells or other facilities which the user wishes to control or monitor. In some embodiments, the data store 34 includes a plurality of account records, each account record having one or more user names, one or more user passwords, billing information (e.g., billing address, subscription price, and invoicing data), and identifiers of one or more site master-controllers (e.g. an IP address of each site master-controller) with which users under the corresponding account are authorized to interact (e.g., issue commands or view reports of data from the site master-controller). The data store 34 may encode such arrangements of data in a variety of formats, including a relational database, program state, hierarchical key-value pairs, a flat file, or other information encoded in a tangible, non-transitory, machine-readable medium, such as a hard drive or random access memory.

[0020] The illustrated site server 36 may be operative to interface between the command-center server 14 and the site master-controllers 16 by directing commands received via the web server 32 to the site master-controller 16 to which the command is addressed and receiving process data from the respective site master-controllers to be stored in the data store 34 or presented to the users via the web server 32. In some embodiments, the site server 36 is operative to receive a command via the web server 32, identify an IP address of the site master-controller 16 to which the command is addressed, and send the command to the respective site master-controller 16, for example via an IP address of the command set center server (which may be the same as that of the web server 32 or different) and via a port of the command-center server 14 (which may be different from a port used for the web server 32, or some embodiments may use the same port).

[0021] The data store 34, web server 32, and site server 36 may be co-located, for example in a single computing device, or these components 32 and 34 may be distributed across a number of computing devices, either co-located or physically distributed. The web server 32 and site server 36 may be operative to issue queries to the data store 34 to implement requests from the user devices 26 or 28, and the web server 32 may communicate with the site server 36 to effectuate commands.

The Integration Group of The Americas Ex. 1004-Page 337
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

[0022] In some embodiments, each site master-controller 16 controls a respective fluid-handling site 24 (only one of which is shown for site master-controller 18, though each of the other site master-controllers 20 and 22 may be associated with their own, differently located fluid-handling site, or some sites may have multiple site master controllers). The site master-controller 16 may receive commands from the command-center server 14 and implement those commands to completion, for example without further feedback to, and control signals from, the command-center server 14, such that the command can be executed even if a network connection to the command-center server 14 is temporarily lost. Further, the site master-controller 16 may be operative to report process data to the command-center server 14 for storage in the data store 34 and presentation via the web server 32 on user devices 26 and 28.

[0023] In some embodiments, the site master-controllers 16 are physically located at an associated fluid-handling site 24. For example, the site master-controller 18 may be connected to the fluid-handling site via a private network through which communications are sent without passing through the public Internet, and in some cases, the site master-controller 18 may be within a mile of the fluid-handling site 24, to give one example of co-location. The site master-controllers 16 may be geographically remote from one another, the command-center server 14, and the user devices 26 and 28 (each of which may also be remote from one another). For example, each of these components may be more than 1 mile from one another or not connected to one another via a private network. In some cases, though, some sites may have multiple site master-controllers co-located at a single site or some user devices may be co-located.

[0024] To execute commands at the fluid-handling site 24, the site master-controller 18 translates the received commands into a protocol appropriate for a corresponding fluid-handling device 38 (identified individually by reference numbers 40, 42, 44, 46, and 48). Accordingly, the features of the fluid-handling site 24 are described before addressing internal components of the exemplary site master-controller 18 to explain the environment in which the site master-controller 18 operates.

[0025] In this embodiment, the fluid-handling site 24 includes a plurality of fluid-handling devices 38 that are fluidly coupled to a fluid source 50 or a fluid receptacle 52, such that fluids (e.g., liquids or gases) can flow to, from, or through the respective fluid-handling device 38. The

The Integration Group of The Americas Ex. 1004-Page 338
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

illustrated embodiment includes five fluid-handling devices, but other embodiments may include different numbers of such devices coupled to the various site master-controllers 16.

[0026] The fluid-handling devices may be any of a variety of different types of devices that handle fluids. For example, the fluid-handling devices may be a valve, a pump, a process chamber (for instance a oil/water separation tank), or a process filter, or level switch. In some cases, the fluid-handling device may include an actuator, for instance an electric motor or a hydraulic drive, by which fluid flow or other parameters are manipulated, a sensor 56 by which process parameters are measured, or a local controller 58 by which power to the actuator 54 is modulated. Fluid-handling devices 38 may include a variety of types of sensors, for instance, a temperature, viscosity, flowrate, fluid level, pressure, conductivity, or other parameter sensor.

[0027] The illustrated fluid-handling device 40 is shown with feedback control of the actuator 54 by the local controller 58 based on measurements from the sensor 56, but other embodiments may include an actuator with feed-forward control, including actuators controlled by an on-off switch without sensor feedback. The local controller 58 may be operative to receive a command to drive the actuator 54 from a current setpoint to a target setpoint and control the flow of power (e.g. hydraulic or electric power) to the actuator 54 to implement the requested change of state. For instance, the controller 58 may receive a command to change a speed, pressure, or flowrate of a pump and may respond by increasing or decreasing a flow of electric or hydraulic power to an electrical or hydraulic motor driving such a pump. Or the controller 58 may receive a command to open or close a valve and, in response, may increase or decrease a flow of electric or hydraulic power to a corresponding actuator that opens or closes the valve.

[0028] In some cases, the local controllers 58 may have relatively limited processing power, such that more complicated changes in state are executed responsive to multiple commands to the respective fluid-handling device 38. For example, a fluid-handling device 38 with feed-forward control may receive a command to adjust to a target setpoint, return sensor data to the site master-controller 18, and received a subsequent command to adjust further based on a determination made by the site master-controller 18 based on the sensor data. In another example, a stuck-valve may be loosened by a series of commands issued from the site master-controller 18 causing a local controller 58 to oscillate between states, working the stuck-valve

The Integration Group of The Americas Ex. 1004-Page 339
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

loose. Similarly, shocks to up-stream or down-stream fluid-handling devices may be mitigated by a series of commands gradually changing the state of a given fluid-handling device, for instance gradually ramping up or down the speed of a pump or gradually opening or closing a valve. In some embodiments, an action that affects the system, yet originates from outside the system, may use logic from a controller in the local system, such as a relatively drastic or rapid reduction in a specific tank level, which may indicate that a leak in a tank may exists, and the outside logic may provide which tank is experiencing the leak.

[0029] The site master-controller 18, in some embodiments, communicates with the fluid-handling devices 38 via a plurality of control buses 60 (individually labeled as 62, 64, and 66). Each control bus 60 may be operative to convey commands to one or more of the fluid-handling devices 38 using a different protocol. In this example, control bus 66 communicates with fluid-handling devices 42 and 40, control bus 64 communicates with fluid-handling device 44, and control bus 62 communicates with fluid-handling devices 46 and 48, but this arrangement is merely exemplary, and other embodiments may include more or fewer control buses, more or fewer fluid-handling devices per control bus, and more or fewer control buses per fluid-handling device. The control buses 60 may be serial or parallel control buses conveying digital or analog signals.

[0030] In one particular implementation, intended to serve merely as an example, the control bus 66 conveys commands and data using a serial communication protocol, such as the Modbus remote terminal unit (RTU) protocol, in which commands and other data are encoded in binary signals packaged in frames having redundant bits for detecting errors. The fluid-handling devices 40 and 42 on the bus 66, in this example, each have a unique address on the bus 66 by which commands from the site master-controller 68 are addressed to specific fluid-handling devices 40 or 42, and these addresses may be stored in memory of the site master-controller 18 as described in greater detail below. In some examples, site master-controller 18 acts as a master device on the bus 66, controlling which devices are permitted to transmit signals on the bus 66 at a given point in time. In this example, the fluid-handling devices 42 and 40 may include a bus interface that detects when a command is addressed to the respective fluid-handling device and stores the command for further processing, for example by a local controller 58 that implements the command. For example, fluid-handling device 40 may be a pump, and the bus 66 may convey

The Integration Group of The Americas Ex. 1004-Page 340
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

commands to the local controller 58 to increase the speed of the actuator 54, for example an electric motor speed, to increase a pumping flowrate or pressure. In another example, the site master-controller 18 may issue a command on bus 66 to fluid-handling device 40 to return a value sensed by sensor 56, for example a measured pump speed, pressure, or flowrate.

[0031] In another aspect of this particular exemplary implementation, the bus 64 conveys a single value, for example a binary on/off value encoded in a voltage or current, or an analog control signal, encoded in a current or voltage, to one fluid-handling device 44 via a single wire (or pair of wires, if a reference different from ground is used). In some cases, the value may be a voltage ranging from 0 to 5 V, or some other range, in which a relatively low voltage, below a threshold, corresponds to an off signal, and a relatively high voltage, above a threshold, corresponds to an on signal. In some cases, the same command may be conveyed to multiple fluid-handling devices connected in series or parallel, or multiple commands may be conveyed by multiple wires in parallel to a single fluid-handling device or multiple fluid-handling devices, for instance one on-off signal per fluid-handling device. As explained in greater detail below, one or more instances the bus 64 may connect to a data acquisition board of the site master-controller 18 for manipulating voltage or current to encode commands. In one example, the bus 64 conveys a binary value to a local controller for a valve actuator as a voltage-high or voltage-low signal, commanding the valve to open or close, respectively. In some cases, instances of the bus 64 may also return data to the site master-controller 18, for example as an analog signal indicating the state of a sensor. In some embodiments, instances of the bus 64 may connect to sensors on fluid-handling devices that are also connected to the bus 66 or the bus 62, e.g., returning sensor values, while the other buses convey commands.

[0032] In another aspect of this particular exemplary implementation, the bus 62 is an Ethernet bus, forming a private local area network by which the site master-controller 18 communicates with fluid-handling devices 46 and 48 via the Ethernet protocol. Examples of various forms of constraints and set point targeting that might be implemented with such communication are described below with reference to local controllers. In this example, data is conveyed in frames of binary data, and each of the site master-controller 18 and the fluid-handling devices 46 and 48 are associated with a respective network address that, when included in such a frame, indicates that the frame is addressed to the associated device. Frames may include redundancy to detect

The Integration Group of The Americas Ex. 1004-Page 341
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

corrupted frames, and access to the bus 62 may be controlled in a distributed fashion, by each device sensing whether a transmission by the device caused a collision on the bus 62, e.g., using carrier-sense multiple-access techniques with collision detection. In this example, fluid-handling devices 46 and 48 may include network interfaces, such as network interface cards or integrated devices that detect frames addressed to the corresponding fluid-handling device 46 or 48, capture the frames, and store commands encoded in the frames (e.g., in a buffer) for subsequent processing by a local controller. Similarly, the fluid-handling devices 46 and 48 may return data to the site master-controller 18, for example data from sensors of the fluid-handling devices, using the Ethernet protocol.

[0033] As noted above, the site master-controller 18, in this embodiment, like the other site master-controller 20 and 22, is operative to receive commands from the command-center server 14 and translate those commands in accordance with both protocols of the respective buses 62, 64, or 66 and command formats supported by the fluid-handling devices 38 (e.g., command codes, on-off signals, application-program interfaces, and the like, depending on the device). To this end, in this embodiment, the site master-controller 18 includes a network interface 68, a site management module 70, a protocol multiplexer 72, command translators 74 (individually labeled as 76, 78, 80), controllers 82 (individually labeled as 84, 86, 88, 90, 92, and 94), and input/output modules 96 (individually labeled as 98, 100, and 102). The site master-controller 18 may also include a report buffer 104 that stores data to be reported back to the command-center server 14.

[0034] The illustrated network interface 68 is operative to communicate with the command-center server 14 via the Internet 30 (e.g., via the Internet and other networks, such as a local area network, a cellular network, or the like). In some embodiments, the site management module 70 communicates with the network interface 68 via application program interfaces of an operating system in which the site master-controller 18 is executed.

[0035] The illustrated site-management module 70 is operative to coordinate the operation of the other components of the site master-controller 18. In some cases, the site management module 70 monitors a network socket defined by an Internet protocol address and port of the site master-controller 18 and handles events, e.g., incoming commands, from the network socket. In some embodiments, the site-management module 70 is implemented with multiple threads, in a system

The Integration Group of The Americas Ex. 1004-Page 342
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

in which one thread sends and receives data request; one thread controls and monitors the current state of the system, causing other threads to be synced with current information; one thread writes to writeable devices (e.g., devices having memory) to set the target state of each device; one thread that handles server interaction for updating and receiving; one thread that handles user interaction (e.g., presenting interfaces on an local display, receiving user input, and handling events from such input); and one thread that eliminates threads that become problematic.

[0036] The site manager module 70 may also be operative to transmit data with the network socket, using the network interface 68, to the command-center server 14. For example, the site manager module 70 may periodically retrieve data from the report buffer 104, such as alarms, measurements from sensors, and other data associated with the fluid-handling site 24, and push this data to the command-center server 14. Or the site management module 70 may be operative to receive requests for such data being pulled from the command-center server 14, and retrieve the corresponding data from the report buffer 104 for transmission back to the command-center server 14. Further, the site manager module 70 may be operative to request measurements, alarms, and other data from the fluid-handling devices via the components 72, 74, 82, and 96, and store this data in the report buffer 104 for transmission to the command-center server 14.

[0037] In this embodiment, when the site management module 70 receives a command via the network interface 68, or issues its own command (e.g., to poll sensors or alarm logs), the command is conveyed to a protocol multiplexer 72, which may be operative to determine which control bus 60 and fluid-handling device 38 will receive a corresponding translated command. For example, the protocol multiplexer 72 may store in memory records for communicating with the fluid-handling devices 38. Each record may correspond to a individual fluid-handling device 38 or an individual actuator or sensor of a fluid-handling device, and each record may include a unique identifier of the corresponding device, actuator, or sensor; a control bus address of the device, actuator, or sensor (for those components on a control bus that is addressable); an identifier of the control bus 62, 64, or 66 through which the site master-controller 18 communicates with the device, actuator, or sensor; and an identifier of the protocol through which such communication occurs.

The Integration Group of The Americas Ex. 1004-Page 343
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

[0038] When a command is received at the protocol multiplexer 72, in some embodiments, the command includes the identifier of the device, actuator, or sensor to which the command is directed, and using this identifier, the protocol multiplexer 72 retrieves the corresponding record from memory to identify the appropriate protocol. In this example, based on the protocol in the record, the protocol multiplexer 72 selects among the command translators 74, each of which corresponds to a different protocol. For example, the command translator 80 may correspond to a protocol of control bus 66, such as the modbus RTU protocol; the command translator 78 may corresponds to a protocol of the control bus 64, such as a binary or analog voltage or current signal conveyed via a data acquisition board; and the command translator 76 may corresponds to a protocol of the control bus 62, such as the Ethernet protocol.

[0039] The command translators 74 may be operative to translate a received command from an input format to a format configured to effectuate changes in the fluid-handling devices 38. For instance, a generic command to open a valve may be sent from the control-center server 14, and that command may be translated to differently depending on the specific protocol used to communicate with the corresponding valve at a given site, with different sites potentially employing different protocols for the task. Translating commands may abstract the details of the site-specific implementations away from those implementing the command-center server 14, facilitating relatively rapid deployment of new features or sites.

[0040] In one example of translation, the command translator 80 may receive a command to increase a pump speed, and the command translator may determine a corresponding command via calculation or look-up table, such as a modbus function code and associated data, that when conveyed via the control bus 66 causes a corresponding fluid-handling device 40 or 42 to change state. In some embodiments, prior to execution, the command is checked for validity, to ensure the current conditions of the system warrant that the commanded action occur to preventing harm to the fluid-handling devices.

[0041] For example, some embodiments may store in memory accessible to the command translator 80 system constraints describing acceptable patterns of input and output parameters. The system constraints may be selected to prevent damage to the system, e.g., a maximum speed for a pump, a maximum or minimum liquid height for a tank, a maximum or minimum fluid

The Integration Group of The Americas Ex. 1004-Page 344
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

pressure, a maximum or minimum flow rate, an impermissible pattern of open valves that would leak oil outside of the system, etc. A command may be compared against these constraints to determine whether the command would cause the system to violate one of the constraints. In response to determining that the command would violate a constraint, the command may be rejected, an override confirmation may be requested from the operator, or the command may be executed to the extent permitted by the constraints, for instance.

[0042] Some embodiments may execute the translated commands in different modes. For instance, in an automatic mode, the command translator 80 may select set points to keep the system within the above-described constraints, execute a process recipe in which a collection of set points are targeted, or to target other output set points given the above described constraints. In another example, the system may operate in a mixed automatic mode in which the user selects which devices are manually controlled while other devices are automatically controlled. In a third example, a manual mode, each of the devices may be controlled manually.

[0043] In another example, the command translator 78 may be operative to determine whether a command corresponds to a particular voltage or current on an individual instance of the control bus 64. For example, a command to dislodge a stuck valve may be translated by the command translator 78 into a sequence of on and off signals conveyed via a high and low voltage on an individual wire corresponding to bus 64.

[0044] In another example, the command translator 76 may be operative to translate commands into a format configured to change the state of fluid-handling devices 46 or 48. Or in some embodiments, command translator 76 is operative to pass through and un-translated command if appropriately formatted as received from the command-center server 14.

[0045] Some embodiments may include controllers 82 operative to execute control routines implicated by the translated commands on an individual device 38, actuator 54, or sensor 56. To this end, the commands translator 74, in addition to transmitting commands, may also route the translated command to a controller 82 corresponding to the specific device, actuator, or sensor to which the command is directed. The controllers 82 may determine set points corresponding to (or conveyed in) the command, send control signals configured to drive the fluid-handling device to the set points, and receive feedback from the fluid-handling device 38 indicative of whether

The Integration Group of The Americas Ex. 1004-Page 345
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

the fluid-handling device 38 has achieved the target set point. In some embodiments, the controllers 82 include proportional-integral-derivative controllers for exercising feedback control, or the controllers 82 may include feed forward control algorithms (e.g., look-up tables or formulas for calculating commands based on set points). Further, in some embodiments, the controllers 82 may change the set point over time in accordance with the received command, for example a command to gradually ramp up a motor speed, a command to gradually open a valve, or a command to oscillate the position of a valve to dislodge a stuck valve. Algorithms for changing the set point may be stored in memory accessible to the controllers 82 responsive to a translated command implicating the specific algorithm.

[0046] The illustrated input/output modules 26 include, in some embodiments, link-layer devices that accommodate the particular features of the physical medium with which control buses 62, 64, and 66 are implemented. In some cases, the input/output modules 96 also perform encoding and decoding at the network and transport layer, for example packaging data in appropriately structured frames for the respective control bus 60. In one example, the input/output module 102 includes a modbus modem, the input/output module 100 includes a data acquisition board (for example a printed circuit board having one or more digital-to-analog converters or analog-to-digital converters), and the input/output module 98 includes an Ethernet network interface card.

[0047] The site master-controller 18, thus, may be operative to receive commands from the site server 36 of the command-center server 14, translate those commands, identify the appropriate control bus 60 and, if needed, address on the control bus, and implement the command once received, even if network access is lost after the command is issued from the command-center server 14. Further, the site master-controller 18, in some embodiments, is operative to retrieve sensor data, alarms, and other site data, and buffer such data in the report buffer 104, before the data is periodically returned to the command-center server 14, such that buffered data is not lost if network access ceases intermittently. Accordingly, some embodiments provide control and monitoring of remote fluid handling sites 24 that is relatively robust to interruptions in network service, and some embodiments facilitate such monitoring and control via a web browser on user devices 26 and 28, such that the addition of new devices or users is relatively simple compared to systems that require special purpose applications. Again though, not all embodiments provide these benefits, and some embodiments may provide other benefits.

The Integration Group of The Americas Ex. 1004-Page 346
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

[0048] The components of the site master-controller 18 and command-center server 14 are described above with reference to discrete functional blocks and as discrete unitary components, but it should be understood that software or hardware by which these functional blocks or components are implemented may be distributed across multiple computing systems or multiple processes within a computing system, and code, stored in a tangible, non-transitory, machine-readable medium, for providing this functionality or the functionality described below may be intermingled, conjoined, divided, or otherwise differently organized than the manner in which the functional blocks are illustrated.

[0049] Figure 2 illustrates an embodiment of a process 104 for exercising remote control of a fluid-handling site. The process 104 may be performed by the above-described site master-controllers 16, though embodiments are not limited to the implementations described above. Further, embodiments may include additional steps, fewer steps, and steps in a different order from the manner in which the process 104 is illustrated, which is not to suggest that any other feature described herein is required in all embodiments or cannot be modified.

[0050] In some embodiments, the process 104 includes receiving, via a network interface, from a remote user device, (e.g., via a command-center server) a command to change a state of a fluid-handling device to a target state, as illustrated by block 106. The command may be received from, for example, the above-describes site server 36, which may have received the command from a remote user device via a web browser of the user device. Further, the command to change the fluid-handling device to a target state may include a command that changes the fluid-handling device to a plurality of different states over time, such as a command to ramp up or down a motor speed or oscillate some parameter.

[0051] In some embodiments, the process 104 includes identifying a protocol and control bus of the fluid-handling device, as illustrated by block 108. Identifying a protocol and control bus may include parsing an identifier of a device, actuator, or sensor from the received command and retrieving a corresponding record based on the identifier, the record including an identifier of the protocol and control bus. In some embodiments, the retrieved record may also include an identifier of a control bus address of the corresponding device, actuator, or sensor.

The Integration Group of The Americas Ex. 1004-Page 347
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

[0052] In some embodiments, the process 104 includes translating the received command into a translated command based on the identified protocol, as illustrated by block 110. Examples of such translation are described above with reference to the command translators 74.

[0053] The process 104 may also include sending the translated command to a local controller of the fluid-handling device via the identified control bus, as illustrated by block 112. Sending the translated command may include exercising feedback control of the fluid-handling device based on sensor data received from the fluid-handling device by adjusting a set point sent to the local controller. Or in some use cases, sending the translated command may include sending a sequence of set points that change over time.

[0054] In some embodiments, the process 104 includes receiving sensor data from the fluid-handling device confirming that the command was executed, as illustrated by block 114. As with the other features described herein, not all embodiments include this step. Using this data, some embodiments may exercise feedback control or may retrieve sensor measurements following the execution of a command for reporting to the user device. In some cases, the sensor data is retrieved regardless of whether a command was issued, for example periodically to monitor the state of the fluid-handling device. In one example, the fluid-handling device is an oil/water separation tank, and a set point of a pump is adjusted to change a fluid level in the tank, e.g., a level at which oil meets water or a level of the oil.

[0055] In some embodiments, the received sensor data is stored in local memory, as illustrated by block 116. For example, the received sensor data may be stored in the above-described report buffer 104.

[0056] In some embodiments, the process 104 further includes periodically sending the sensor data to the remote server for reporting to the user device, as illustrated by block 118. Periodically, data from the report buffer may be transmitted to the above-described command-center server 14 for compilation of reports requested by user devices 26 to 28. Similarly, alarms or other log data issued by fluid-handling devices may also be retrieved, stored, and transmitted to the command-center server 14 for reporting.

The Integration Group of The Americas Ex. 1004-Page 348
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

[0057] Thus, systems implementing the process 104, in some embodiments, offer relatively robust control and monitoring of fluid-handling devices that are geographically distributed. This is expected to lower the costs associated with operating such fluid-handling devices and facilitate the extraction of petroleum products and other processing of fluids.

[0058] Figure 3 is a diagram that illustrates an exemplary computing system 1000 in accordance with embodiments of the present technique. Various portions of systems and methods described herein, may include or be executed on one or more computer systems similar to computing system 1000. Further, processes and modules described herein may be executed by one or more processing systems similar to that of computing system 1000.

[0059] Computing system 1000 may include one or more processors (e.g., processors 1010a-1010n) coupled to system memory 1020, an input/output I/O device interface 1030 and a network interface 1040 via an input/output (I/O) interface 1050. A processor may include a single processor or a plurality of processors (e.g., distributed processors). A processor may be any suitable processor capable of executing or otherwise performing instructions. A processor may include a central processing unit (CPU) that carries out program instructions to perform the arithmetical, logical, and input/output operations of computing system 1000. A processor may execute code (e.g., processor firmware, a protocol stack, a database management system, an operating system, or a combination thereof) that creates an execution environment for program instructions. A processor may include a programmable processor. A processor may include general or special purpose microprocessors. A processor may receive instructions and data from a memory (e.g., system memory 1020). Computing system 1000 may be a uni-processor system including one processor (e.g., processor 1010a), or a multi-processor system including any number of suitable processors (e.g., 1010a-1010n). Multiple processors may be employed to provide for parallel or sequential execution of one or more portions of the techniques described herein. Processes, such as logic flows, described herein may be performed by one or more programmable processors executing one or more computer programs to perform functions by operating on input data and generating corresponding output. Processes described herein may be performed by, and apparatus can also be implemented as, special purpose logic circuitry, e.g., an FPGA (field programmable gate array) or an ASIC (application specific integrated circuit).

The Integration Group of The Americas Ex. 1004-Page 349
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

Computing system 1000 may include a plurality of computing devices (e.g., distributed computer systems) to implement various processing functions.

[0060] I/O device interface 1030 may provide an interface for connection of one or more I/O devices 1060 to computer system 1000. I/O devices may include devices that receive input (e.g., from a user) or output information (e.g., to a user). I/O devices 1060 may include, for example, graphical user interface presented on displays (e.g., a cathode ray tube (CRT) or liquid crystal display (LCD) monitor), pointing devices (e.g., a computer mouse or trackball), keyboards, keypads, touchpads, scanning devices, voice recognition devices, gesture recognition devices, printers, audio speakers, microphones, cameras, or the like. I/O devices 1060 may be connected to computer system 1000 through a wired or wireless connection. I/O devices 1060 may be connected to computer system 1000 from a remote location. I/O devices 1060 located on remote computer system, for example, may be connected to computer system 1000 via a network and network interface 1040.

[0061] Network interface 1040 may include a network adapter that provides for connection of computer system 1000 to a network. Network interface may 1040 may facilitate data exchange between computer system 1000 and other devices connected to the network. Network interface 1040 may support wired or wireless communication. The network may include an electronic communication network, such as the Internet, a local area network (LAN), a wide area (WAN), a cellular communications network or the like.

[0062] System memory 1020 may be configured to store program instructions 1100 or data 1110. Program instructions 1100 may be executable by a processor (e.g., one or more of processors 1010a-1010n) to implement one or more embodiments of the present techniques. Instructions 1100 may include modules of computer program instructions for implementing one or more techniques described herein with regard to various processing modules. Program instructions may include a computer program (which in certain forms is known as a program, software, software application, script, or code). A computer program may be written in a programming language, including compiled or interpreted languages, or declarative or procedural languages. A computer program may include a unit suitable for use in a computing environment, including as a stand-alone program, a module, a component, a subroutine. A

The Integration Group of The Americas Ex. 1004-Page 350
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

computer program may or may not correspond to a file in a file system. A program may be stored in a portion of a file that holds other programs or data (e.g., one or more scripts stored in a markup language document), in a single file dedicated to the program in question, or in multiple coordinated files (e.g., files that store one or more modules, sub programs, or portions of code). A computer program may be deployed to be executed on one or more computer processors located locally at one site or distributed across multiple remote sites and interconnected by a communication network.

[0063] System memory 1020 may include a tangible program carrier having program instructions stored thereon. A tangible program carrier may include a non-transitory computer readable storage medium. A non-transitory computer readable storage medium may include a machine readable storage device, a machine readable storage substrate, a memory device, or any combination thereof. Non-transitory computer readable storage medium may include, non-volatile memory (e.g., flash memory, ROM, PROM, EPROM, EEPROM memory), volatile memory (e.g., random access memory (RAM), static random access memory (SRAM), synchronous dynamic RAM (SDRAM)), bulk storage memory (e.g., CD-ROM and/or DVD-ROM, hard-drives), or the like. System memory 1020 may include a non-transitory computer readable storage medium may have program instructions stored thereon that are executable by a computer processor (e.g., one or more of processors 1010a-1010n) to cause the subject matter and the functional operations described herein. A memory (e.g., system memory 1020) may include a single memory device and/or a plurality of memory devices (e.g., distributed memory devices). In some embodiments, the program may be conveyed by a propagated signal, such as a carrier wave or digital signal conveying a stream of packets.

[0064] I/O interface 1050 may be configured to coordinate I/O traffic between processors 1010a-1010n, system memory 1020, network interface 1040, I/O devices 1060 and/or other peripheral devices. I/O interface 1050 may perform protocol, timing or other data transformations to convert data signals from one component (e.g., system memory 1020) into a format suitable for use by another component (e.g., processors 1010a-1010n). I/O interface 1050 may include support for devices attached through various types of peripheral buses, such as a variant of the Peripheral Component Interconnect (PCI) bus standard or the Universal Serial Bus (USB) standard.

The Integration Group of The Americas Ex. 1004-Page 351
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

[0065] Embodiments of the techniques described herein may be implemented using a single instance of computer system 1000, or multiple computer systems 1000 configured to host different portions or instances of embodiments. Multiple computer systems 1000 may provide for parallel or sequential processing/execution of one or more portions of the techniques described herein.

[0066] Those skilled in the art will appreciate that computer system 1000 is merely illustrative and is not intended to limit the scope of the techniques described herein. Computer system 1000 may include any combination of devices or software that may perform or otherwise provide for the performance of the techniques described herein. For example, computer system 1000 may include or be a combination of a cloud-computing system, a data center, a server rack, a server, a virtual server, a desktop computer, a laptop computer, a tablet computer, a server device, a client device, a mobile telephone, a personal digital assistant (PDA), a mobile audio or video player, a game console, a vehicle-mounted computer, or a Global Positioning System (GPS), or the like. Computer system 1000 may also be connected to other devices that are not illustrated, or may operate as a stand-alone system. In addition, the functionality provided by the illustrated components may in some embodiments be combined in fewer components or distributed in additional components. Similarly, in some embodiments, the functionality of some of the illustrated components may not be provided or other additional functionality may be available.

[0067] Those skilled in the art will also appreciate that, while various items are illustrated as being stored in memory or on storage while being used, these items or portions of them may be transferred between memory and other storage devices for purposes of memory management and data integrity. Alternatively, in other embodiments some or all of the software components may execute in memory on another device and communicate with the illustrated computer system via inter-computer communication. Some or all of the system components or data structures may also be stored (e.g., as instructions or structured data) on a computer-accessible medium or a portable article to be read by an appropriate drive, various examples of which are described above. In some embodiments, instructions stored on a computer-accessible medium separate from computer system 1000 may be transmitted to computer system 1000 via transmission media or signals such as electrical, electromagnetic, or digital signals, conveyed via a communication medium such as a network or a wireless link. Various embodiments may further include

The Integration Group of The Americas Ex. 1004-Page 352
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

receiving, sending or storing instructions or data implemented in accordance with the foregoing description upon a computer-accessible medium. Accordingly, the present invention may be practiced with other computer system configurations.

[0068] It should be understood that the description and the drawings are not intended to limit the invention to the particular form disclosed, but to the contrary, the intention is to cover all modifications, equivalents, and alternatives falling within the spirit and scope of the present invention as defined by the appended claims. Further modifications and alternative embodiments of various aspects of the invention will be apparent to those skilled in the art in view of this description. Accordingly, this description and the drawings are to be construed as illustrative only and are for the purpose of teaching those skilled in the art the general manner of carrying out the invention. It is to be understood that the forms of the invention shown and described herein are to be taken as examples of embodiments. Elements and materials may be substituted for those illustrated and described herein, parts and processes may be reversed or omitted, and certain features of the invention may be utilized independently, all as would be apparent to one skilled in the art after having the benefit of this description of the invention. Changes may be made in the elements described herein without departing from the spirit and scope of the invention as described in the following claims. Headings used herein are for organizational purposes only and are not meant to be used to limit the scope of the description.

[0069] As used throughout this application, the word “may” is used in a permissive sense (i.e., meaning having the potential to), rather than the mandatory sense (i.e., meaning must). The words “include”, “including”, and “includes” and the like mean including, but not limited to. As used throughout this application, the singular forms “a”, “an” and “the” include plural referents unless the content explicitly indicates otherwise. Thus, for example, reference to “an element” or "a element" includes a combination of two or more elements, notwithstanding use of other terms and phrases for one or more elements, such as “one or more.” The term "or" is, unless indicated otherwise, non-exclusive, i.e., encompassing both "and" and "or." Terms describing conditional relationships, e.g., "in response to X, Y," "upon X, Y,", “if X, Y,” "when X, Y," and the like, encompass causal relationships in which the antecedent is a necessary causal condition, the antecedent is a sufficient causal condition, or the antecedent is a contributory causal condition of the consequent, e.g., "state X occurs upon condition Y obtaining" is generic to "X occurs solely

The Integration Group of The Americas Ex. 1004-Page 353
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

upon Y" and "X occurs upon Y and Z." Such conditional relationships are not limited to consequences that instantly follow the antecedent obtaining, as some consequences may be delayed, and in conditional statements, antecedents are connected to their consequents, e.g., the antecedent is relevant to the likelihood of the consequent occurring. Further, unless otherwise indicated, statements that one value or action is "based on" another condition or value encompass both instances in which the condition or value is the sole factor and instances in which the condition or value is one factor among a plurality of factors. Unless specifically stated otherwise, as apparent from the discussion, it is appreciated that throughout this specification discussions utilizing terms such as "processing", "computing", "calculating", "determining" or the like refer to actions or processes of a specific apparatus, such as a special purpose computer or a similar special purpose electronic processing/computing device. In the context of this specification, a special purpose computer or a similar special purpose electronic processing or computing device is capable of manipulating or transforming signals, for instance signals represented as physical electronic, optical, or magnetic quantities within memories, registers, or other information storage devices, transmission devices, or display devices of the special purpose computer or similar special purpose processing or computing device.

DECLARATION (37 CFR 1.63) FOR UTILITY OR DESIGN APPLICATION USING AN APPLICATION DATA SHEET (37 CFR 1.76)

Title of Invention	REMOTE CONTROL OF FLUID-HANDLING DEVICES

As the below named inventor, I hereby declare that:

This declaration is directed to:

☐ The attached application, or

☒ United States application or PCT international application number 14147190

filed on 03-JAN-2014.

The above-identified application was made or authorized to be made by me.

I believe that I am the original inventor or an original joint inventor of a claimed invention in the application.

I hereby acknowledge that any willful false statement made in this declaration is punishable under 18 U.S.C. 1001 by fine or imprisonment of not more than five (5) years, or both.

WARNING:

Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form PTO-2038 submitted for payment purposes) is never required by the USPTO to support a petition or an application. If this type of personal information is included in documents submitted to the USPTO, petitioners/applicants should consider redacting such personal information from the documents before submitting them to the USPTO. Petitioner/applicant is advised that the record of a patent application is available to the public after publication of the application (unless a non-publication request in compliance with 37 CFR 1.213(a) is made in the application) or issuance of a patent. Furthermore, the record from an abandoned application may also be available to the public if the application is referenced in a published application or an issued patent (see 37 CFR 1.14). Checks and credit card authorization forms PTO-2038 submitted for payment purposes are not retained in the application file and therefore are not publicly available.

LEGAL NAME OF INVENTOR

Inventor: Aaron Phillips Date (Optional): _____

Signature: _____

Note: An application data sheet (PTO/SB/14 or equivalent), including naming the entire inventive entity, must accompany this form or must have been previously filed. Use an additional PTO/AIA/01 form for each additional inventor.

This collection of information is required by 35 U.S.C. 115 and 37 CFR 1.63. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 1 minute to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

STATEMENT REGARDING IDS PRACTICE

Because the present application is a continuation patent application, Applicants are electing to not burden the Office with duplicate information disclosure statements to re-cite references considered with respect to the parent application. Applicants have chosen this course in view of the Manual of Patent Examination and Procedure[1] (MPEP) 609.02, which states as follows:

> When filing a continuing application that claims benefit under 35 U.S.C. 120 to a parent application (other than an international application that designated the U.S.), it will not be necessary for the applicant to submit an information disclosure statement in the continuing application that lists the prior art cited by the examiner in the parent application unless the applicant desires the information to be printed on the patent issuing from the continuing application (for continued prosecution applications filed under 37 CFR 1.53(d), see subsection A.1. below). The examiner of the continuing application will consider information which has been considered by the Office in the parent application.
>
> ...
>
> The examiner will consider information which has been considered by the Office in a parent application when examining: (A) a continuation application filed under 37 CFR 1.53(b), (B) a divisional application filed under 37 CFR 1.53(b), or (C) a continuation-in-part application filed under 37 CFR 1.53(b). A listing of the information need not be resubmitted in the continuing application unless the applicant desires the information to be printed on the patent.

Applicants understanding is that the Examiner will consider the references listed on the face of (or otherwise indicated as being considered against) parent applications.

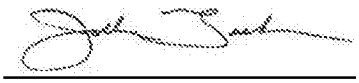

Moreover, to avoid later mischaracterizations of the examination process by accused infringers before judges or juries less familiar with the intricacies of the MPEP, Applicants wish to note on the record that, as a result of this practice of the U.S. Patent Office, the face of a patent issuing from the present application will not necessarily contain a full list of references considered. One must also review the file history of the parent applications to ascertain the full corpus of references considered against the present application.

---

[1] The forward to the MPEP states as follows: "This Manual is published to provide U.S. Patent and Trademark Office (USPTO) patent examiners, applicants, attorneys, agents, and representatives of applicants with a reference work on the practices and procedures relative to the prosecution of patent applications before the USPTO. It contains instructions to examiners, as well as other material in the nature of information and interpretation, and outlines the current procedures which the examiners are required or authorized to follow in appropriate cases in the normal examination of a patent application."

General Authorization for Payment of Fees

The Commissioner is authorized to charge any additional fees that may be required to Deposit Account No. 033975.

FIG. 3

CLAIMS

What is claimed is:

1. A hosted, web-based, remote industrial monitoring and control system for geographically distributed facilities in oil and gas fields, the system comprising:

a computer-implemented datastore storing:

a plurality of accounts, each account corresponding to an entity operating one or more geographically distributed oil or gas facilities, the accounts associating different oil or gas facilities with different entities; and

network addresses by which industrial monitoring or control equipment at the facilities is accessible via cellular network connections, the monitoring or control equipment including sensors or actuators;

a computer-implemented facility-interface module or modules configured to obtain data from the sensors at the facilities and send commands to the actuators at the facilities via the cellular network connections; and

a computer-implemented web-interface module or modules configured to send instructions to present control interfaces in web browsers executing on user computing devices logged in to the accounts and to receive commands to control actuators from the user computing devices,

wherein the system is configured to receive, with the web-interface module or modules, a user command to actuate an actuator entered via a presented control interface, identify a network address in the datastore corresponding to a facility at which the actuator is located, and send instructions with the facility-interface module or modules to the facility to actuate the actuator.

2. The system of claim 1, wherein the sensors include a tank level sensor of a tank at one of the facilities, and wherein the datastore includes a record associating the tank with the facility, data from the tank being unavailable to users without an account associated with the tank.

3. The system of claim 1, wherein the sensors include a level sensor of an oil/water separation tank at one of the facilities configured to indicate a level at which oil meets water, and wherein the datastore includes a record associating the tank with the facility.

The Integration Group of The Americas Ex. 1004-Page 365
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

4. The system of claim 1, wherein the sensors include a leak detector at one of the facilities, and wherein the datastore includes a record associating the leak detector with the facility.

5. The system of claim 1, wherein:

the web-interface module or modules comprises a web server; and

the facility-interface module or modules comprises a site server distinct from the web server.

6. The system of claim 5, wherein:

the web server communicates with user devices via a first network port of a computing device executing the web server; and

the site server communicates with facilities via a second network port of the computing device, the second network port being different from the first network port.

7. The system of claim 1, wherein:

the data store stores subscription information associated with at least some of the accounts.

8. The system of claim 1, wherein the facility-interface module or modules comprise:

means for interfacing with a plurality of site controllers associated with the facilities.

9. The system of claim 1, wherein the web-interface module or modules comprise:

means for sending instructions to present a control interface on the user devices.

10. The system of claim 1, wherein the datastore stores accounts for more than one hundred facilities, and the web-interface module or modules are configured interface with more than one hundred user devices.

11. The system of claim 1, wherein the facility-interface module or modules are configured to send pull requests to facilities to retrieve data buffered at the facilities.

The Integration Group of The Americas Ex. 1004-Page 366
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

12. The system of claim 1, comprising:

a controller at one of the facilities communicatively coupled to an actuator or a sensor.

13. The system of claim 12, comprising at least four of the following as distinct threads from one another:

a thread configured to sends and receive data requests;

a thread configured to synchronize other threads with updated information;

a thread configured to set a target state of actuators;

a thread configured to obtain updated sensor readings;

a thread configured to process user interactions; and

a thread that eliminates other threads upon detecting a problem with the eliminated threads.

14. The system of claim 12, comprising at least two of the following as distinct threads from one another:

a thread configured to sends or receive data request;

a thread configured to synchronize other threads with updated information;

a thread configured to set a target state of actuators;

a thread configured to obtain updated sensor readings;

a thread configured to process user interactions; and

a thread that eliminates other threads upon detecting a problem with the eliminated threads.

15. The system of claim 12, wherein the controller is communicatively coupled to the actuator or sensor via a private local area network.

16. The system of claim 12, wherein controller is communicatively coupled to the actuator or sensor via a frame-based carrier-sense multiple access protocol with collision detection.

The Integration Group of The Americas Ex. 1004-Page 367
SitePro, Inc. v. WaterBridge Resources, LLC, et al
IPR2024-00739-U.S. Patent No. 9,898,014

17. The system of claim 12, wherein controller is configured to periodically push buffered data to the facility-interface module or modules.

18. The system of claim 12, comprising:

means for ensuring at least some data is not lost if network access ceases intermittently.

19. The system of claim 12, comprising:

means for translating a command for an actuator from an input format to a format configured to effectuate changes in the actuator.

20. The system of claim 19, comprising:

means for executing control routines implicated by translated commands on an individual actuator or sensor.

21. The system of claim 12, comprising:

means for transmitting data to the facility-interface module or modules.

22. The system of claim 12, comprising:

means for checking validity of a command.

23. The system of claim 12, comprising:

an oil or gas facility communicatively coupled to the controller.

Filing By Reference:

Only complete this section when filing an application by reference under 35 U.S.C. 111(c) and 37 CFR 1.57(a). Do not complete this section if application papers including a specification and any drawings are being filed. Any domestic benefit or foreign priority information must be provided in the appropriate section(s) below (i.e., "Domestic Benefit/National Stage Information" and "Foreign Priority Information").

For the purposes of a filing date under 37 CFR 1.53(b), the description and any drawings of the present application are replaced by this reference to the previously filed application, subject to conditions and requirements of 37 CFR 1.57(a).

Foreign Priority Information:

This section allows for the applicant to claim priority to a foreign application. Providing this information in the application data sheet constitutes the claim for priority as required by 35 U.S.C. 119(b) and 37 CFR 1.55. When priority is claimed to a foreign application that is eligible for retrieval under the priority document exchange program (PDX)[i] the information will be used by the Office to automatically attempt retrieval pursuant to 37 CFR 1.55(i)(1) and (2). Under the PDX program, applicant bears the ultimate responsibility for ensuring that a copy of the foreign application is received by the Office from the participating foreign intellectual property office, or a certified copy of the foreign priority application is filed, within the time period specified in 37 CFR 1.55(g)(1).

Statement under 37 CFR 1.55 or 1.78 for AIA (First Inventor to File) Transition Applications

☐ This application (1) claims priority to or the benefit of an application filed before March 16, 2013 and (2) also contains, or contained at any time, a claim to a claimed invention that has an effective filing date on or after March 16, 2013.
NOTE: By providing this statement under 37 CFR 1.55 or 1.78, this application, with a filing date on or after March 16, 2013, will be examined under the first inventor to file provisions of the AIA.

Authorization or Opt-Out of Authorization to Permit Access:

When this Application Data Sheet is properly signed and filed with the application, applicant has provided written authority to permit a participating foreign intellectual property (IP) office access to the instant application-as-filed (see paragraph A in subsection 1 below) and the European Patent Office (EPO) access to any search results from the instant application (see paragraph B in subsection 1 below).

Should applicant choose not to provide an authorization identified in subsection 1 below, applicant **must opt-out** of the authorization by checking the corresponding box A or B or both in subsection 2 below.

NOTE: This section of the Application Data Sheet is **ONLY** reviewed and processed with the **INITIAL** filing of an application. After the initial filing of an application, an Application Data Sheet cannot be used to provide or rescind authorization for access by a foreign IP office(s). Instead, Form PTO/SB/39 or PTO/SB/69 must be used as appropriate.

1. Authorization to Permit Access by a Foreign Intellectual Property Office(s)

A. Priority Document Exchange (PDX) - Unless box A in subsection 2 (opt-out of authorization) is checked, the undersigned hereby **grants the USPTO authority** to provide the European Patent Office (EPO), the Japan Patent Office (JPO), the Korean Intellectual Property Office (KIPO), the State Intellectual Property Office of the People's Republic of China (SIPO), the World Intellectual Property Organization (WIPO), and any other foreign intellectual property office participating with the USPTO in a bilateral or multilateral priority document exchange agreement in which a foreign application claiming priority to the instant patent application is filed, access to: (1) the instant patent application-as-filed and its related bibliographic data, (2) any foreign or domestic application to which priority or benefit is claimed by the instant application and its related bibliographic data, and (3) the date of filing of this Authorization. See 37 CFR 1.14(h)(1).

B. Search Results from U.S. Application to EPO - Unless box B in subsection 2 (opt-out of authorization) is checked, the undersigned hereby **grants the USPTO authority** to provide the EPO access to the bibliographic data and search results from the instant patent application when a European patent application claiming priority to the instant patent application is filed. See 37 CFR 1.14(h)(2).

The applicant is reminded that the EPO's Rule 141(1) EPC (European Patent Convention) requires applicants to submit a copy of search results from the instant application without delay in a European patent application that claims priority to the instant application.

2. Opt-Out of Authorizations to Permit Access by a Foreign Intellectual Property Office(s)

☐ A. Applicant **DOES NOT** authorize the USPTO to permit a participating foreign IP office access to the instant application-as-filed. If this box is checked, the USPTO will not be providing a participating foreign IP office with any documents and information identified in subsection 1A above.

☐ B. Applicant **DOES NOT** authorize the USPTO to transmit to the EPO any search results from the instant patent application. If this box is checked, the USPTO will not be providing the EPO with search results from the instant application.

NOTE: Once the application has published or is otherwise publicly available, the USPTO may provide access to the application in accordance with 37 CFR 1.14.

Applicant Information:

Providing assignment information in this section does not substitute for compliance with any requirement of part 3 of Title 37 of CFR to have an assignment recorded by the Office.

Applicant 1 — Remove

If the applicant is the inventor (or the remaining joint inventor or inventors under 37 CFR 1.45), this section should not be completed. The information to be provided in this section is the name and address of the legal representative who is the applicant under 37 CFR 1.43; or the name and address of the assignee, person to whom the inventor is under an obligation to assign the invention, or person who otherwise shows sufficient proprietary interest in the matter who is the applicant under 37 CFR 1.46. If the applicant is an applicant under 37 CFR 1.46 (assignee, person to whom the inventor is obligated to assign, or person who otherwise shows sufficient proprietary interest) together with one or more joint inventors, then the joint inventor or inventors who are also the applicant should be identified in this section.

U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE
Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it contains a valid OMB control number.

Application Data Sheet 37 CFR 1.76	Attorney Docket Number	034392-0444743
	Application Number	
Title of Invention	REMOTE CONTROL OF FLUID-HANDLING DEVICES	

This collection of information is required by 37 CFR 1.76. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 23 minutes to complete, including gathering, preparing, and submitting the completed application data sheet form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1 The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these records.

2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.

3 A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.

4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).

5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent CooperationTreaty.

6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).

7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.

8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.

9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

ABSTRACT

[0070] Provided is a process, including: receiving, via the network interface, from a remote user device, a command to change a state of the fluid-handling device to a target state; translating the received command into a translated command operative to cause a local controller of the fluid-handling device to drive the fluid-handling equipment to the target state, the local controller being responsive to the command and feedback from the fluid-handling device indicative of whether the fluid-handling device is in the target state; and sending the translated command to the local controller
