Access ITS America

Public Programs, Notices & Announcements

Access ITS America is proud to serve as the federally-mandated, international ITS information clearinghouse. As such, Access ITS America contains notices, announcements and documents issued by the United States Department of Transportation (USDOT) regarding federal ITS programs and services. Individuals and organizations active within the ITS community, and the public at large, are encouraged to make extensive use of this wealth of information provided by the USDOT and its related agencies.

- [Commercial Vehicle Operations](#)
- [ITS Fair Information and Privacy Principles](#)
- [ITS Quarterly Abstracts](#)
- [National ITS Architecture Documents](#) The *National ITS Architecture* provides a common structure for the design of intelligent transportation systems. The architecture defines the functions (e.g., gather traffic information or request a route) that must be performed to implement a given user service, the physical entities or subsystems where these functions reside (e.g., the roadside or the vehicle), the interfaces/information flows between the physical subsystems, and the communication requirements for the information flows (e.g., wireline or wireless). In addition, it identifies and specifies the requirements for the standards needed to support national and regional interoperability, as well as product standards needed to support economy of scale considerations in deployment.
- [National Surface Transportation Goal for ITS](#)
- [Press Releases](#) Press Releases from ITS America and ITS America members announcing personnel changes, mergers, technology deployment or contracts won.
- [Public Announcements](#) Public Announcements from ITS America, ITS America members, and the Department of Transportation.
- [Program Plan](#) The National ITS Program Plan consists of four documents: an Executive Summary, a Synopsis, and two Volumes. The Executive Summary provides a very brief overview of the goals, objectives, and recommendations presented

Public Announcements

- [Program Plan](#) The National ITS Program Plan consists of four documents: an Executive Summary, a Synopsis, and two Volumes. The Executive Summary provides a very brief overview of the goals, objectives, and recommendations presented in the National ITS Program Plan. The Synopsis provides a fifty page encapsulation of the major subject areas within the document, with special emphasis on the area of deployment. Volume I focuses on the goals of ITS, compatibility, deployment, and program assessment. Volume II contains detailed descriptions and plans for each of the twenty nine user services.
- [Standards Catalog](#) Standards and protocols needed to support a nationwide ITS continue to be identified and developed as the ITS architecture and design progress. The Standards Catalog is an overall guide for exploring standards requirements and the coordination of standards development by standards developing organizations. It provides a summary of ITS standards and protocol status, tracking each standard through the stages of development. The catalog contains both technology standards and interface protocols. Existing standards and protocols, developing standards and protocols, and newly identified standards and protocols are included. The Database is cross indexed and sorted into several different views as well as being full text searchable.
- [Surface Transportation Research and Development Plan](#)  "The third edition of the *Surface Transportation Research and Development Plan* presents the Department's strategic plan for maximizing the effectiveness of DOT R&D; activities over the next ten years toward attainment of these goals."
- [Telecommunications Documents](#) The ITS America Telecommunications Policy and Strategy paper reflects the present position adopted by consensus of the Telecommunications Committee. The policy statements are delineated into two categories: general guidance principles, and specific technical policies. The paper is a living document which adopts a dynamic process to keep up with the rapidly changing telecommunications industry, the national ITS architecture, policies of the US DOT, and applicable regulatory agencies. The Telecommunications Policy and Strategy paper is sorted into six parts and is also full text searchable.
- [Transaction Documents](#) The Transaction Documents Repository provides access to legal, policy and business documents which address emerging issues relating to ITS. Documents for the TDR come primarily from ITS America members, so your contribution of materials is vital to the continued success of this resource. Abstracts and documents are cross-indexed into multiple "views". Select a view to see a list of subheadings and individual documents under each subheading.
- [USDOT ITS Projects Book](#) This resource describes ITS projects, tests, and studies initiated that have been partially or totally financed from Federal ITS funds. The report is a complement to the National ITS Program Plan, and is organized to describe those DOT-sponsored activities which support the development of user services, national compatibility planning, deployment, deployment support, and program assessment. The Projects Book includes both "Near Term" (next five years) and "Long Term" research projects. The database is cross indexed and sorted by views including "User Service Bundles." It is also full text searchable.
- [USDOT Website](#)
- [USDOT ITS Website](#)
- [U.S. TAG ISO/TC204](#)
- [User Services](#)
