Facebook Login makes it easy to connect with users on your [app](#) or [website](#). You can use [several methods](#) in the JavaScript or mobile SDKs to speed up the registration process and build a functional system in minutes.

- [Permissions](#)
- [Signed Request](#)

Permissions**Email Permissions**

Email is a protected property and must be specifically asked for and granted.

Extended Permissions

Extended Permissions give access to more sensitive info and the ability to publish and delete data

Extended Profile Properties

Non-optional permissions for access to a user's data and that of their friends.

Open Graph Permissions

Open Graph permissions allow your app to publish [actions](#) to the Open Graph and also to retrieve actions published by other apps.

Page Permissions

Permissions related to management of Facebook Pages.

Public Profile and Friend List

The public profile and friend list is the basic information available to an app. All other permissions and content must be explicitly asked for.

Signed Request**Fields in signed_request**

For certain types of apps, a [signed request](#) is passed to the app which contains some additional fields of information.
