

Orca Security Named to Redpoint 2024 InfraRed 100 for Second Consecutive Year

Latest achievement reaffirms the company's unwavering commitment to trailblazing next generation cloud security and innovation

PORTLAND, Ore. – June 18, 2024 – [Orca Security](#), the pioneer of agentless cloud security, announced today that it has been named to the [Redpoint 2024 InfraRed 100](#), a comprehensive list of the 100 top private companies in Cloud Infrastructure. This curated selection of transformative companies honors the latest leaders that have excelled in setting new standards for reliability, scalability, security, and innovation—enabling businesses to thrive in the cloud and ushering a new paradigm of building cloud infrastructure solutions.

"We are thrilled to be recognized by Redpoint Ventures for a second straight year, which is a testament to the impact our continued innovation has had on our customers and marketplace overall," said Gil Geron, CEO and Co-founder of Orca Security. "Staying ahead in the market requires more than just keeping pace. This latest win further inspires us to continue pushing the boundaries and offering groundbreaking solutions that empower our customers to safely embrace and navigate the cloud with confidence and ease."

Orca revolutionized cloud security by inventing its patented SideScanning™ technology in 2019, which many competitors have since tried to imitate. The platform enables companies to understand risk and compliance issues across 100 percent of cloud workloads, AI models, configurations, and identities without deploying agents, dramatically accelerating time to value and providing deep visibility into complex cloud environments. The data is processed in a single location – the Unified Data Model – surfacing the most critical risks so these can be addressed first.

With continuous platform advancements, Orca delivers on the company's promise of providing the most comprehensive cloud security solution. Beginning in 2023, Orca has led the way by being the first cloud security vendor to leverage generative AI in its platform. Its [built-in AI features](#) lower skill thresholds, simplify investigations, calculate optimal configurations, and drastically speed remediation times – saving cloud security, DevOps, and development teams time and effort, while significantly improving security outcomes. Most recently, [Orca introduced AI Security Posture Management](#) (AI-SPM) features to strengthen security for organizations that are implementing AI to revolutionize aspects of their businesses. No other cloud security platform offers this many capabilities in a single platform, built as one from the start, and without the need to integrate any additional solutions.

The recognition continues a string of accolades for Orca Security. Earlier in June, Orca was named to [Rising in Cyber 2024](#), an independent list launched by Notable Capital to recognize the most promising cybersecurity companies in the eyes of Chief Information Security Officers (CISOs), venture capital investors, and other security leaders. In March, Forbes recognized Orca on its [2024 America's Best Startup Employers list](#) for its commitment to maintaining a strong reputation, investing in employee satisfaction, and experiencing steady growth.
