Descope, Drata, Orca Security, Tonic, and Wing Security are companies in Notable Capital's portfolio.

Rising in Cyber: Key Trends

Cybersecurity is seeing an explosion of innovation to address evolving threats faced by enterprises, especially as they balance the risk/reward of AI. A survey of 100+ CISOs revealed three primary challenges security teams are facing today. New developments and innovation from Rising in Cyber honorees address many of these challenges.

1. Identity management

- The rise of non-human actors and identity-centric, malware-free attacks, which accounted for 75% of incidents in 2023, highlights the urgent need for robust identity and access management (IAM) solutions

2. Cloud security

- With the transition to multi-cloud architectures, traditional security tools continue to be inadequate for cloud environments.
- Innovations in cloud detection

3. Application security

- The widespread use of open-source code introduces new vulnerabilities, while AI is supercharging product security teams.
- Startups enabling collaboration

- The rise of non-human actors and identity-centric, malware-free attacks, which accounted for 75% of incidents in 2023, highlights the urgent need for robust identity and access management (IAM) solutions.
- Startups are stepping up with next-generation Identity Governance and Administration (IGA), new authentication platforms, and privileged access management tools.
- With the transition to multi-cloud architectures, traditional security tools continue to be inadequate for cloud environments.
- Innovations in cloud detection and response, data security, automation, risk management, and AI threat detection are becoming essential.
- The widespread use of open-source code introduces new vulnerabilities, while AI is supercharging product security teams.
- Startups enabling collaboration between developers and security teams are leading the way, with AI improving code remediation and testing.
